

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

AN
EPITOME
OF
UNIVERSAL HISTORY,

FROM
The earliest Period
TO
THE REVOLUTIONS OF 1848.

TOGETHER WITH
HISTORICAL CHARTS,
AND
AN EXTENSIVE CHRONOLOGICAL TABLE
ON THE SYSTEM OF
GREY'S MEMORIA TECHNICA.

BY A. HARDING.

LONDON:
LONGMAN, BROWN, GREEN, AND LONGMANS,
PATERNOSTER-ROW.
1848.

PREFACE.

THE following little work was suggested by seeing a very small Epitome, which had been successfully used by the late Miss Lockyer of Hendon, the periods and charts of which are, with the full permission of her friends, altered, enlarged, and adapted to the present volume, which, it is anxiously hoped, will not be found unworthy of its talented but very brief predecessor.

About 770 Questions, on facts connected with the several histories, are added. A Chronological Table, with dates as nearly as possible according to Hales, and an abbreviation of Grey's System, has, with much care and labour, been compiled and appended. The circumstances and facts

noticed are those that appear most essentially connected with a knowledge of History.

The practical experience of many years has served to convince the writer that all the most competent and attentive instructors can do for their pupils is, to lay a solid foundation for future excellence by giving them such general information as shall awaken a desire to pursue further reading and inquiry; and impress on them the value and importance of a well-informed mind and rightly-directed taste.

To impart a thorough knowledge of History would occupy more time than can be given to any one branch of study during the few years devoted to education, in which so much is to be done, and so much more attempted. Hence the writer has thought that a work, in itself nothing more than an epitome, containing such facts, both ancient and modern, as will tend to awaken an interest in History, and induce to further research, yet differing from the general cast of even good school books, accompanied by an extensive chronological

table, might be found useful and instructive, and of itself, if well understood, redeem the pupil from ignorance on this important branch of study.

With these views it is humbly and respectfully offered to the Public.

A. H.

Brixton Oval, June, 1848.

AN
EPITOME
OF
UNIVERSAL HISTORY.

HISTORY may be divided, with respect to time, into Ancient, Middle, and Modern.

Ancient History comprehends the time which passed from the Creation of the World to the birth of Jesus Christ.

The History of the Middle Ages extends from the birth of Christ to the year 1400, when Europe began, in many respects, to assume a new appearance.

Modern History extends from the year 1400 to the present time.

It is necessary to subdivide these great spaces of time into several periods.

We shall therefore divide History into sixteen periods—seven for Ancient History, five for the History of the Middle Ages, and four for Modern History.

ANCIENT HISTORY.

First Period. — The first period comprehends one thousand six hundred and fifty-six years, from the Creation of the World to the Deluge. Before Christ 2348.

This period contains the history of the Creation, disobedience and punishment of man; of the covenant which God made with Adam after his fall, and of the depravity which afterwards took place over the earth, and which led to the destruction of the whole human race, the family of Noah alone excepted.

Second Period. — The second period comprehends nearly eight hundred years, from the Deluge to the time of the Israelites quitting Egypt. B. C. 1550.

This period contains the history of the covenant God made with Noah after the Deluge; of the re peopling of the earth by the descendants of his sons, Shem, Ham, and Japhet; of the dispersion of mankind after the building of the tower of Babel; of the history of the Israelites from Abraham to Moses; of the foundation of the Assyrian monarchy by Nimrod; and some uncertain accounts of the origin of the Grecian States, and of the Egyptians.

Third Period. — The third period comprehends almost eight hundred years, from the time of the

Israelites quitting Egypt to the foundation of Rome. B. C. 753.

This period contains the history of the Israelites in the wilderness, of their settling in the land of Canaan, of their judges and kings, and of their division into the kingdoms of Israel and Judah. The kingdoms of Sparta, Athens, Thebes, Corinth, and Macedon, were founded about the beginning of this period. Towards the end of it Lycurgus established his laws in Sparta. The Egyptians were rendered famous by their king Sesostris; and the Assyrian monarchy was destroyed at the death of Sardanapalus, and divided into the kingdoms of Media, Babylonia, and Nineveh. The siege of Troy and the era of the Olympiads took place also during this period.

Fourth Period.—The fourth period comprehends two hundred and sixteen years, from the foundation of Rome to the taking of Babylon by Cyrus. B. C. 537.

This period contains the history of the six first of the Roman kings; of Draco, Solon, and Pisis-tratus, in Athens; of the union of the kingdoms of Babylon and Nineveh by Esarhaddon; of the destruction of the kingdom of Israel by Salma-naser; of the conquest of Jerusalem and the captivity of Judah by Nebuchadnezzar; and of the succession of Cyrus to the ancient Assyrian empire under the title of the Persian empire.

Fifth Period.—The fifth period comprehends two hundred and four years, from the taking of

Babylon by Cyrus to the expedition of Alexander into Asia. B. C. 333.

This period contains the history of the abolition of monarchy in Rome, of the taking of Rome by the Gauls, and of the Samnite war. The history of the kings of Persia to Darius, who was conquered by Alexander the Great; of the Grecian republic, distinguished by its philosophers and warriors; of the Persian and Peloponnesian wars; of the retreat of the ten thousand; of Philip of Macedon; of the return of the Jews from captivity; and of the rebuilding of the Temple.

Sixth Period. — The sixth period comprehends one hundred and eighty-eight years, from the expedition of Alexander into Asia to the destruction of Carthage. B. C. 145.

This period contains the history of the subversion of the Persian empire by Alexander the Great; of the division of Alexander's dominions between his four generals, who founded four independent kingdoms; of the defence of Judea by the Maccabees; of the Achæan League; of Pyrrhus, king of Epirus; of the beginning of the Roman conquests in Greece; and of the three Punic wars, which ended with the destruction of Carthage, the epoch of Roman grandeur.

Seventh Period. — The seventh period comprehends one hundred and forty-five years, from the destruction of Carthage to the birth of Christ, which terminates Ancient History.

This period contains the history of the conquests of the Romans in Greece, Asia Minor, Syria,

Judea, Africa, and Gaul; of the civil wars between Pompey and Cæsar, and between Augustus and Mark Antony; and of the change of the Roman government to a monarchy under Augustus, in whose reign our Saviour was born.

MIDDLE AGES.

Eighth Period.—The eighth period comprehends three hundred and twelve years, from the birth of Christ to the year 312 of the Christian era, when Constantine the Great embraced Christianity.

This period contains little more than the history of the Roman empire, as the Romans possessed the greater part of the then known world. It begins with Augustus and continues to Constantine, who removed the seat of empire to Constantinople. Jerusalem was destroyed by Titus seventy years after the birth of Christ.

Ninth Period.—The ninth period comprehends one hundred and sixty-four years, from Constantine the Great to the extinction of the Western empire. A. D. 476.

This period is also nearly confined to the history of the Roman empire, which, soon after Constantine, was divided into the Eastern and Western empires. The power of the Romans was at this time rapidly declining; they were invaded by the Vandals, the Visigoths, the Gauls, and other northern nations, who at last took possession of Rome, and put an end to the Western empire.

During this period the Romans finally abandoned their conquests in Britain, and the Franks settled in Gaul.

Tenth Period. — The tenth period comprehends three hundred and twenty-four years, from the extinction of the Western empire to the nominal re-establishment of the same empire under Charlemagne. A. D. 800.

This period contains the continuation of the history of the Eastern empire, that of the Visigoths, Ostrogoths, and Lombards, and of the Saxons in Britain; in France, of Clovis, of the Mayors of the palace, of Pepin, the founder of the Carolingian line; of the conquest of the Lombards by Charlemagne, which gave him possession of Italy. Mahomet also lived during this period: his successors, the Saracens, conquered Persia, Syria, Palestine, Sicily, the northern parts of Africa, and settled finally in Spain.

Eleventh Period.—The eleventh period comprehends two hundred and ninety-seven years, from the time Charlemagne received the imperial crown to the first Crusade. A. D. 1097.

This period contains the history of the loss of Italy and Germany, and also of Burgundy, by the successors of Charlemagne; of the power which the Popes began to acquire over the clergy, and even over the princes of Europe; of the disputes between the Popes and the Patriarchs of Constantinople; of the conquest of Italy by Otho the Great, emperor of Germany; of the extinction of the Carolingian race by the election of Hugh

Capet to the throne of France ; and of the conquest of England by William Duke of Normandy. The Danes and Swedes embraced Christianity and began to be known during this period.

Twelfth Period. — The twelfth period comprehends three hundred and three years, and extends from the first Crusade to the year 1400, which finishes the Middle Ages.

This period contains the history of the Crusades, or expeditions of the Europeans to recover the Holy Land from the Turks, who had conquered it from the Saracens ; of Rodolph of Hapsburg, the founder of the house of Austria ; of the disturbances between the Guelphs and Gibellines ; of the disputes which arose in the Church, and occasioned the election of two Popes at the same time ; of the Latin emperors of Constantinople ; of the conquests of Ireland and Wales by the English, and of their victories in France during the reign of Edward III. ; of Margaret of Waldemar, the Semiramis of the North ; and of the conquests of Zenghis Khan and his successors in Asia.

MODERN HISTORY.

Thirteenth Period. — The thirteenth period comprehends one hundred and nineteen years, from the year 1400 to the election of Charles V., Emperor of Germany. A. D. 1519.

This period contains the history of Tamerlane and Bajazet, and of the taking of Constantinople

by the Turks ; of the invasion of France by Henry V. of England ; of the wars between the houses of York and Lancaster, and of the election of Henry VII. to the throne of England ; of the Russians having shaken off the yoke of the Tartars ; of the rise of several of the Italian states ; of the invention of printing ; of the family of the Medici in Florence ; of the union of the crowns of Arragon and Castile by the marriage of Ferdinand and Isabella, and the subjection of the Moors in Spain ; of the discovery of America by Columbus, and of the Cape of Good Hope by the Portuguese.

Fourteenth Period.—The fourteenth period comprehends one hundred and twenty-four years, from the reign of Charles V. in Germany to the accession of Louis XIV. in France. A. D. 1643.

This period contains the history of Charles V., Emperor of Germany, of Francis I., King of France, of Henry VIII., King of England, of Pope Leo X., and of the Reformation which began in Germany under Luther, and extended to most of the northern kingdoms of Europe ; of the reign of Elizabeth in England ; of the succession of James VI. of Scotland to the English throne, and of Henry IV. to that of France ; of the revolt of the United Provinces, under the Prince of Orange, from the oppressions of Philip II. of Spain ; of the delivery of Sweden from the Danish yoke by Gustavus Vasa, and of the recovery of Portugal from the Spaniards by the Duke of Braganza.

Fifteenth Period. — The fifteenth period comprehends one hundred and forty-six years, from the accession of Louis XIV. in France to the peace of Amiens in 1802.

This period contains the history of the death of Charles I. in England; of the usurpation of Cromwell; of the restoration of Charles II., and the revolution which placed William Prince of Orange on the throne of England; of the reign of Louis XIV. in France; of the succession of the house of Bourbon to the throne of Spain, in the person of Philip V.; of the conquests of Charles XII. of Sweden, and of Peter the Great, Emperor of Russia; of the union of England and Scotland; of the succession of George I. to the throne of England at the death of Queen Anne; of Maria Theresa, Empress of Germany and Queen of Hungary; of Frederick the Great, King of Prussia, and Catherine II., Empress of Russia; of the revolt of the United States of America from Great Britain; of the conquests of the English in the East Indies; and of the dismemberment of Poland by the sovereigns of Russia, Prussia, and Austria; of the revolution in France in 1789; of the death of Louis XVI.; of the reign of terror and commencement of the career of Buonaparte; of the administration of Pitt in England, and the mutiny of the English fleet at the Nore; of the naval victories of the English at St. Vincent's and Camperdown; of the invasion of Italy by Buonaparte, and of the fall of Venice; of the expedition of the French into Egypt; of

the victory of Lord Nelson at the Nile; of the Rebellion in Ireland; of the return of Buonaparte from Egypt, and his being chosen first consul; of the union of Ireland with England; of the victory of Buonaparte at Marengo; of that of Nelson at Copenhagen; and of the peace concluded with England at Amiens in 1802.

Sixteenth Period. — The sixteenth period comprehends forty-five years, from the peace of Amiens in 1802 to the revolution in France and other parts of Europe in 1848.

This period contains the history of the renewal of hostilities between England and France, of the assumption of the Imperial crown by Napoleon Buonaparte; of the battle of Trafalgar; of the abolition of the slave-trade by the English; of the relinquishing of the Imperial crown of Germany by the emperor, and his adoption of the title of Emperor of Austria; of the new kingdoms established by Napoleon, and of his taking Vienna; of his brothers being placed on the thrones of Spain, Holland, Westphalia, and Naples, and of his threatened invasion of England; of the peace between France and Austria, and the marriage of Napoleon with Maria Louisa; of the dethronement of the Pope, and the union of Holland with France; of the invasion of Russia by Napoleon, which was the commencement of his ill success; of the burning of Moscow, and the destruction of the French army; of the coalition of the allies against France; of the defeat of the French at Leipsic; of the Prince of Orange being

declared king of the Netherlands; of the continued successes of the English in Spain under Lord Wellington; of the advance of the allied troops towards the capital of France; of the capitulation of Paris, and of the resignation of the crowns of France and Italy by Napoleon; of the formation of a new constitution in France; of the establishment of Louis XVIII. on the throne of his ancestors; of the banishment of Napoleon to Elba; of the treaty of peace signed at Paris between the Emperors of Austria and Russia, the Kings of Great Britain and Prussia, and the King of France; of the re-establishment of the Pope, and the restoration of the Jesuits; of the escape of Napoleon from Elba, and his return to Paris; of the reunion of the allied powers against Napoleon; of his complete defeat at the glorious battle of Waterloo, and his flight to Paris; of the reinstatement of Louis XVIII. on his throne, and of the banishment of Napoleon to St. Helena; of the French being obliged to relinquish their conquests and acquisitions, and to admit 150,000 of the allied troops under the command of the Duke of Wellington; of the death of the Princess Charlotte, heiress apparent to the throne of England; of the foundation of the kingdoms of Columbia, Mexico, Buenos Ayres, Chili, and Peru; of the decline of the Turkish empire, and the battle of Navarino; of the passing of the Roman Catholic Relief Bill; of the ordinances of Charles X., which led to the revolution of July 1830, in which

Charles was driven from his throne, and Louis Philippe nominated King of the French; of the succession of William IV. to the throne of Great Britain, which introduced a Whig Ministry, Corporate Reform, Parliamentary Reform, a bill in favour of Dissenters, and the total abolition of Slavery; of the insurrection of the Greeks against the Turkish empire; the devastation committed by Ibrahim Pasha in the Morea; the loss of the Turkish fleet at Navarino; Otho, crown Prince of Bavaria, elected King of Greece, thus again raised to a kingdom; of the death of Ferdinand of Spain, and the contest between his daughter Maria Isabella and her uncle Don Carlos; of the division of Belgium from Holland, and the elevation of Leopold, Duke of Saxe Coburg, to the throne of Belgium; of the accession of Nicholas to the throne of all the Russias; of the accession of Alexandrina Victoria, daughter of the late Duke of Kent, to the British Crown; of the accession of the Duke of Cumberland to the crown of Hanover; of the marriage of the Queen of England to Albert, Prince of Saxe Coburg and Gotha; of the Chartist disturbances; of the war with China, and its probable results; of the changes in Canada; of the war in the East Indies against the Affghans, Scinde, and the Sikhs, under the command of Sir Charles Napier; of the distress and famine in Ireland; of the marriages of the Queen of Spain with Don Francisco D'Assis, and her sister the Infanta with the Duke de Montpensier, a son of

Louis Philippe; of the government of Algiers being usurped by the French; of the sudden Revolution in France, the abdication of Louis Philippe, and the declaration of a Republican government in France;

ASIA.

ASIA is the largest division of the eastern hemisphere: it is the oldest, or rather the earliest known, of the four quarters of the globe; and though now sunk into the most wretched state of Pagan darkness and idolatry, commands our respect as being the country in which God first manifested his work of Creation. It was here God placed his creature Man in a state of innocence; it was here man fell from that state, and was driven from Paradise; it was here the first human being was born, and here were the first fruits of sin, pain, death, murder. It was in Asia that sin spread and flourished until the sons of men were so corrupt that God destroyed his fair creation by an universal deluge, the family of Noah only excepted. Asia was repopled by the third son of Noah, Shem, and his descendants — who again became sinful, and provoked God to anger, until the earth opened her mouth and swallowed up Dathan, Coran, and Abiram. The cities of Sodom and Gomorrah were also destroyed by fire from heaven, leaving as a lasting memorial a stagnant unwholesome pool where those cities stood.

It was in Asia also that our blessed Saviour, the Lord of life and glory, condescended to put on humanity, to live a life of poverty, and to suffer an ignominious death to redeem man from sin: here also was manifested the descent of the Holy Ghost: here the Apostles laboured, martyrs suffered, and the Gospel won its widening way. So thoroughly is the history of Asia blended with the inspired writings of the Old and New Testaments, that a very short notice will be found sufficient for the young Christian, especially as the conquests made by Great Britain in the East are generally known and familiar.

ASSYRIA.

This country is supposed to have been founded about 100 years after the Deluge by Nimrod, who is described as a mighty hunter. It was situated between the Black and Caspian seas, not far from the spot where the Garden of Eden is supposed to have stood, two of the rivers of which ran through it — Euphrates and Tigris. The great and famous city of Babylon stood on the first of these, and on the latter the far-famed Nineveh, which was built by Semiramis, the wife and successor of Ninus, and the mother of Nynius. Assyria was a powerful and warlike country for nearly 1400 years, when at the death of Sardanapalus it was destroyed, and the three kingdoms of Media, Babylonia, and Nineveh founded on its ruins.

Thus ended the first great monarchy. Babylonia and Nineveh were united under Esarhaddon, until conquered by Cyrus the Great.

PERSIA.

Cyrus was the founder of the Persian monarchy—the second of the first four great monarchies of the old world: he inherited the kingdom of Persia from his father Cambyses, Media from his uncle Cyaxeres, and made himself sovereign of all Assyria by the conquest of Babylon. He had also previously conquered Asia Minor, Syria, and Arabia; afterwards he subdued all the nations between those dominions and the Red Sea, and carried his victorious arms to the confines of Ethiopia. His son and successor added to these extensive dominions the kingdoms of Egypt—the most fertile country in the world,—watered and enriched by the Nile flowing through it. This was the only addition made by Cambyses—nor did his successors do much more. Greece was a country long desired by the sovereigns of Persia—particularly by Xerxes; but the Greeks resisted all their efforts, and remained free and independent,—not only so, but even ventured to invade Persia, in which they succeeded, under Alexander of Macedon, who thus founded the Macedonian empire on that of Persia, about 200 years after it had been formed into a monarchy. Alexander entered Asia 333 years before Christ; and after

the battle of the Granicus soon effected the conquest of Asia Minor. In the battle of Issus he encountered Darius, the magnificent king of Persia, who met him with a train much more like that of a conqueror taking possession of a conquered kingdom, than one preparing to defend his dominions against a warrior who carried victory wherever he carried his arms. In this battle the wife and family of Darius were taken captives by Alexander, whose conduct towards them reflected the highest honour on him. Darius afterwards fell in the battle of Arbela. The whole of Greece having been subdued by Alexander and his father, Philip of Macedon, he now turned towards Syria, which, with Tyre, Judea, and Egypt, soon yielded to the conqueror. He also conquered several kingdoms beyond the Caspian Sea, and, conducting his army across the Indus, proceeded into India, where with some difficulty he conquered Porus, an Indian king. After this, Alexander returned to Babylon; and there this "mighty madman" lost his life in a coarse debauch.

INDIA.

India is the richest country of all Asia, and takes its name from the river Indus. Jenghis Khan invaded Hindostan in 1239: after him Timur, or Tamerlane, the Tartar, made a conquest of it in 1519. Baber, king of Fughana, in Tar-

tary, conquered the Hindoo emperor Ibrahim, and governed in his stead; and his posterity have possessed the throne ever since that period. In 1733 Nadir Shah, a Persian, invaded India, and penetrated as far as Delhi. In this invasion it is computed that not less than 200,000 of the Mogul's subjects were slain, many in battle, but many more in a dreadful massacre at Delhi. Nadir Shah is said to have carried away with him money and treasures to the amount of 80,000,000*l.* sterling. The late emperor was Shah Allum: he was taken prisoner by a Persian invader named Abdallah, who assassinated the old man, but his son suffered many and great reverses. The Sujah having elected Sujah al Dowlas, Nabob of Oude, Shah threw himself on the protection of the Nabob: he was, however, afterwards taken under the protection of the English; part of the province of Allahabad was allotted to him with a pension, on which he dragged out a few years of miserable existence. The English now possess immense tracts of country in Asia, which they are constantly increasing. They have a large British population in the three divisions under the British government; and are by the aid of missionaries, schools, and printing-presses, extending the arts of civilisation, and the knowledge of the Gospel as taught by our blessed Redeemer, and preached by his disciples, over a wide extent of country to the heathen who sit in darkness and the shadow of death.

HISTORY OF THE JEWS.

THE most authentic record we have of very early periods in history is to be found in the Holy Scriptures. From these we learn that the whole earth having become exceedingly sinful, God destroyed the inhabitants by a deluge, one only family excepted, by whom the earth was re-peopled. Very soon after the Flood the Scriptures pass over the general race of mankind to relate minutely the history of one family, of whom the greatest care is taken that every fact be made known that can tend to elucidate their history. This family soon became a small nation, — one would say, of very inferior consequence to many surrounding nations; yet it is of this small nation that the sacred history continues to speak. This small and distinct people and nation were the Jews, God's own peculiar people, the only people who retained the knowledge of one supreme Almighty God, when every other nation worshipped numerous deities, and paid their adoration to idols. For 4000 years this singular people have been kept a distinct and separate race in the most wonderful manner. The country also, set apart for them, though not an island, nor a secluded spot of land, but more than many others exposed to the appropriation and subjugation of

other nations, has never (though repeatedly subjugated) become the land of any other people, but appears to be sacredly reserved for the return of the remnant of its own inhabitants. It is scarcely less than miracle that this extraordinary people should for 4000 years have preserved their origin, language, countenance, manners, and country so distinct, that not a shadow of doubt can exist of their being the children of Abraham, though there is not on earth the known posterity of any other individual, scarcely of any other nation, cotemporary with the patriarch.

The history of the Jews begins with Abram, according to Josephus 1253 B.C. Abram was the son of Terah, an idolater, a "maker of images," and was converted from idolatry by an especial revelation from God. In obedience to the divine command, he removed to Ur in Charran, in West Mesopotamia. At this first call Abram was sixty years old; the second call was given after the death of Terah, and separated Abram from his family and nation, directing him to the land afterwards so full of important events to him and his posterity, (Gen. xii. 2.) Relying on the promise, "I will make thee a great nation," Abram entered Canaan on the north, and at the large spreading turpentine-tree of Moreh the Lord promised that the land should be possessed by his descendants. Palestine was not then fully inhabited; and the south being afflicted by famine, Abram, with his family, removed into Egypt, then, as now, famed for its rich corn-lands and pastures. Here Abram,

fearful of the effect of his wife's beauty on the heart of the king, was led into a snare, from which God delivered him, and prevented his losing the promise made to him, and in a few years enabled him to return to Palestine greatly increased in riches. But Abram found that increase of riches was not increase of happiness. Differences arose between him and his worldly-minded relative Lot that led to a separation, and a very different fate awaited them. Still the promise of a posterity was delayed; and Sarai's faith failing, she persuaded her husband to take her handmaid Hagar as his wife, who brought forth a son, and called his name Ishmael. From him the Arabs are descended, a numerous race, whose history to the present day may be summed up in the prophecy delivered to his mother in the wilderness: "He will be a wild man; his hand will be against every man, and every man's hand against him." (Gen. xvi. 12.) "A wild ass man" is the original expression; and Gibbon calls them "wild ass men, armed against mankind." And such they truly are;—their hand against every man, so that even the property of their own tribes is not secure. It has been observed, that of all the numerous streams of population which have covered the earth, this prediction has been uttered *of one only*, and to that *one* it ever has, and still continues to apply. The nations around have been conquered. Arabia still remains free. Other nations have been rich and powerful, but none equal it; ~~and~~ that wonderful country, which can be traced

to one head alone. A recent traveller says : —
“A single glance into the wastes of the desert may tell the tale of a thousand miles as to distance, and 3000 years as to time. Here, alone, the Arab is to be seen in his primitive simplicity — a free wanderer over the same plains. The traveller is carried back at once to the age of the earliest patriarchs. The form he sees presents the picture of those ancient fathers, with scarcely an alteration. He may listen to their language, number their possessions, partake of their food, examine their dress, enter their tents, attend the ceremonies of their marriage festivals, and present himself before their princes, — still all is the same. At the well they water their flocks ; they sit at the door of the tent in the cool of the day ; they take butter and milk, and the calf they have dressed, and set it before the stranger ; they move onward to some distant plain, and pitch their tent near richer pasturage. Their treasures are in camels, kine, sheep, and goats, men-servants and maid-servants, and changes of garment. He may stand near one of their encampments, and, as the aged man sits in dignity, or the young men and maidens drive their flocks past him, he seems to know them all, and almost to recognise those whose names are familiar in the Bible. The mountains, the valleys, the streams, exhibit the like unchanged appearance. Not a rock has been moved, not a barrier has been raised. Planting and culture have not appeared ; not a village has been collected together. The founder of the race

would recognise without effort his own people and his own land." In this his son Ishmael, as well as in his son Isaac, is the posterity of Jacob distinctly preserved, so clear and unchangeable as to be a standing marvel—a mystery serving to establish the truths of prophecy.

The faith of the Arabs, however, differs greatly from that of the patriarch: the descendants of the son of Jacob have forsaken the faith of their fathers, and now follow the lying absurdities of Mahomed.

Isaac, the child of promise, was like his father Abraham, a good and pious man; but for many years the faith of Isaac and Rebecca was severely tried: the promise was in their posterity, yet they had no children. At length twins were born. Esau, the eldest, was in many respects like the bold, wild, self-willed Arab of the present day; Jacob, a man of a quiet mind and domestic habits. In Esau, as the eldest, the promised blessings were centered: he valued them, however, at little price, and sold his birthright to his brother for the carnal gratification of a savoury dish, of which he was particularly fond. Hence he was called Edom, or Red, the colour of his pottage. He also manifested a disregard for the faith of his fathers by taking wives of the idolatrous daughters of the land, and not restraining their opposition to the religion of his parents. When Isaac was growing very old he became anxious to counteract the effects of Esau's folly as much as possible, by giving him the blessing of a first-born. Rebecca, however,

desirous of securing the blessing as well as the birthright to her amiable and favourite son, formed a plan for circumventing Esau and deceiving Isaac. At first Jacob hesitated to confirm the plan of his wily mother by absolute falsehoods: he was, however, overpowered by her readiness to take the blame and sin on herself; the coveted blessing was attained, and on the return of Esau the deceit was found out. Isaac seems, however, to have had some divine certainty that the blessing had been given in accordance with the will of God, and therefore did not attempt to reverse his proceeding. A spiritual blessing rather than a temporal one seems to have been the object of Jacob and his mother; but both had great reason to regret their deceit and fraud, for a dreadful hatred to his brother sprang up in the heart of Esau, and Rebecca was obliged to send away her beloved, dutiful, and affectionate son, that she might not see him slain before her eyes by his own brother for a crime planned and partly executed by herself. Poor mother! she did indeed justly pay the penalty to forfeited truth and honesty. She was already in the vale of years, and could scarcely hope to see the son of her love return from his enforced banishment: nor did she; while he in a distant country was labouring hard under a severe master and relative, the fond but mistaken mother died. In the beautiful narrative contained in the 29th, 30th, and 31st of Genesis we learn how Jacob, who had deceived others, was himself deceived and punished by having Leah

given him as wife instead of his beloved Rachel, and being made to suffer fourteen years of weary servitude; but God blessed Jacob in his substance, and in his flocks; the flocks of Mesopotamia were, under ordinary circumstances, very fruitful, but in the case of Jacob, their increase and strength was remarkable; so that the sons of Laban grew envious, and rendered the condition of Jacob so uncomfortable, that having laid his case before the Lord, and received instructions to return to the land of his fathers, he sent for Rachel and Leah "to the field," their usual summer residence, and finding them willing to depart, they all set forward towards Canaan without delay. Laban quickly followed, unwilling to allow them to depart: they, however, united in raising an altar to "Jehovah the revered One," and parted on friendly terms. Jacob now prepared to meet his brother Esau: he had received an express promise from God of support and protection, and had been favoured by a sight of the angelic host who had guarded him. Still he sent a humble message to his brother, intimating in order to propitiate him, that he possessed property, and asked only forgetfulness of past offences; but no return of friendly greeting arrived. Jacob heard that Esau with 400 men was coming to meet him, and prepared for the escape of his family; and above all, prayed humbly and secretly to his God "until the breaking of day." During that night he had been disabled for flight or hasty motion, Gen. 31st, in remembrance of which the Jews to this day avoid

eating the hinder limbs of animals where the sinew that shrank up is placed. The sun arose, and God, in whose hand are the hearts of all men, gave Jacob strength, and subdued the wrath in the heart of Esau. The brothers met, wept on each others neck, and were reconciled; and Esau proposed that they should form one family. Against this, Jacob found a courteous excuse, and they parted, Esau returning to Sier in the rocky country of Edom, and Jacob crossing the Jordan, "came safe to the city of Shechem" in Palestine, where he bought a piece of land: now Shechem, was in a depraved neighbourhood, and Jacob did not keep his children prudently at home, therefore they brought great grief and sorrow upon him; his daughter Dinah fell into evil, and as one sin leads to another, deceit, violence, and deeds of blood soon followed the indulgence of unlawful passions. Henry says, "See what comes of Dinah's gadding." Scott on this portion of Jacob's history says, "Let parents remember their responsibility, and seriously examine whether much of the vanity, frivolity, and direct sinfulness of their children, is not to be charged to their own blamable neglect, to their passing by evil courses in early life."

Jacob now recollected the vow he had made at Bethel when he fled from Esau, and set about reforming his family by causing his children to put away the strange gods which by degrees had found place among his children and servants. He then set out for Bethel, and passed through the Canaanites without being molested, notwith-

standing the late acts of violence and outrage. Having built an altar to God at Bethel, the Lord appeared to him and renewed his covenant under the title of "God Almighty." Soon after his return his beloved Rachel died, when, giving him another son, only the second she had, for God withheld children from her, and bestowed that blessing on Leah as a compensation for the want of her husband's love. The place of Rachel's interment is described by several travellers. Carne says:—"A small square building surmounted by a dome marks the spot—a wild and solitary place—no palms nor cypress trees to shelter it from the blast; not a single tree to shade the spot." About this time the profligate conduct of his eldest son, and the sinful habits of his younger sons brought heavy grief on the head and heart of Jacob, who now went to Mamre to receive the blessing and close the aged eyes of his venerable parent Isaac. A degree of selfish love of worldly ease becomes apparent in the patriarch at this time. A severe trial awaited him in the loss of his darling son Joseph. Jacob was a partial father, and the sons of Rachel were very dear to him; but he manifested his preference in a weak, injudicious manner, by giving him "a coat of many colours," and making other unwise displays of parental fondness, calculated to fill the lad's head with frivolous pride and vanity, and the hearts of his brothers with envy and hatred toward him. These young men were bad characters, and Joseph, apparently without any remonstrance or caution addressed to

them, informed his father of their sins and evil practices: hence the brethren could no longer speak peaceably to him. In those days, when the precepts and directions of Scripture were not to be obtained, the Almighty sometimes made known his will by dreams and visions. Now, Joseph had dreamed two remarkable dreams, apparently indicating that he should be placed over the heads of his brethren, and probably this increased the self-importance of the spoilt lad, who, being sent to them on business concerning the flocks, fell a victim to their jealousy. They at first proposed to murder him, but God watched over the lad: he was sold to Ishmaelites, carried into Egypt, and re-sold as a slave. Meanwhile, Jacob was deceived by a tale, and taught to believe his darling dead, and the brethren thought every thing had succeeded to their wish. But to what an extraordinary, what a wonderful chain of events did this lead. Egypt was an important and interesting country, that had made far greater advances in learning, in arts, manufactures, and science than any other. It was a fertile land abounding in corn, while the neighbouring nations were suffering from famine. This led to Israel's going down into Egypt—to the captivity and the deliverance of the Jews, and eventually to the introduction of the truths of the Gospel. The stupendous works of art which still remain in Egypt prove that it even then deserved the appellation of "The Cradle of the Sciences," and that she nursed them to a goodly stature; but its downfall *cannot be matter of surprise*, when we call to

mind the gross idolatries of the Egyptians, worshipping every creeping thing, abominable beasts, and all manner of idols. Over this land Joseph became governor, again assisted by two remarkable dreams; but this beautiful part of the history is so pathetically related in the book of Genesis that to repeat it here were superfluous. The famine which ensued was severely felt in Palestine, and probably all through the East, and multitudes resorted to Egypt to buy corn. Among them came the brothers of Joseph, who himself superintended the sale of the corn, and immediately recognised the brethren. The result is well known. Jacob at first refused to believe the assurances of his sons, that Joseph lived and was governor of Egypt: at last, encouraged by a communication from God, the old man with his family set out for the land of Goshen, where Joseph designed to settle his family. It was a fertile spot on the eastern district of the Nile, probably left uninhabited by the shepherd invaders of Egypt. Here a hardy people would prove a barrier against the Philistines, and here the Hebrews would be less liable to corruption than if dispersed through the country. Here the affecting meeting between the aged father and his long-lost son took place. Joseph brought his father into the presence of the monarch, and the patriarch blessed the monarch, referring to Jehovah as the Lord his God: thus once proclaiming his trust and confidence in the living God. Joseph provided for his family during the seventeen years of his father's life, and

the promise of Pharaoh was fulfilled:—"The good of all the land of Egypt is yours;" but, feeling his strength fail, and desiring a "better country," the dying patriarch made Joseph solemnly promise that he should be buried in Canaan, thus leaving a testimony of his faith in the promise that Canaan should be their abode. He then blessed the sons of Joseph, and included them in the promised division, intimating that Shechem also would be theirs, thus making them feel it an honour to be called the sons of Abraham. He also called together his wandering rebellious sons, all of whom appear to have been living, and pronounced on each separately a blessing and short prophecy, every one of which prefigured the character and circumstances of the tribe, and have since been fulfilled literally. Thus Joseph, and his sons, Ephraim and Manasseh, were to be "as fruitful vines." Their numerous tribes occupied the Land of Promise; six or seven of the judges were from Ephraim; so were the kings of Israel, when a division of the land took place. The fierce and warlike tribe of Benjamin was figured forth as "the Wolf," and so of all the others. The patriarch having finished his work, "gathered up his feet into the bed, yielded up the ghost, and was gathered unto his people."

The sons of Jacob appear to have remained in Egypt or Goshen until another king arose, who knew not Joseph; but this distinct people were by their rapid and extraordinary increase becoming formidable. This king therefore degraded them *by the severest bondage*, and laid such heavy

burdens on them that notwithstanding the fertility of the land and the luxuries it supplied, the Israelites were very anxious to leave it. Yet they were obliged to labour "in mortar and brick," for the building of those splendid edifices which still perpetuate their bondage. Finding these cruelties insufficient to prevent the increase of this people, a savage order was issued that every male child born of an Israelite should be destroyed; but vain were the efforts of wicked men. During this inhuman proceeding the deliverer of his race was born, and miraculously preserved by being placed, when his mother could no longer hide him, in a basket on the brink of the river. The daughter of Pharaoh saw and pitied the "goodly child," and at once determined to rescue him. The suggestion of the young woman to call a Hebrew nurse was acceded to, and again the son of Amram, the descendant of Levi, was folded in the arms of a mother. Josephus says, that when the child was three years old, Pharaoh placed his diadem on the curling locks of the young Moses, who with marks of indignation took it off, threw it on the ground, and trampled on it, which the soothsayers regarded as ominous, and would have killed the child, but that the astonished king interfered to save him. The same spirit influenced him when "refusing to be called the son of Pharaoh's daughter, choosing rather to suffer affliction with the children of God than to enjoy the pleasures of sin for a season." He found in the land of Midian employ and intercourse with God for

forty years. During all this time his brethren were groaning under hard taskmasters. It was here on Mount Horeb that the Lord appeared to Moses, and directed him to return to Egypt for the deliverance of the people. After two months Moses obeyed, and, accompanied by his brother Aaron, went to the Egyptian king with a message from the Lord God of Israel, requiring that he should let them go. Pharaoh refused, and caused their sufferings to be increased by doubling the number of bricks they were to make, and refusing to give them straw. These events are beautifully related in the third, fourth, and fifth chapters of Exodus. The brothers again and again appear before the king, when the most remarkable contest in history took place. Ten plagues, each of them bearing on some particular point of Egyptian law or sacred feeling, were sent in succession. These plagues were all different, and sent more fully to show the power of Israel's God and the wickedness of Pharaoh in disregarding the repeated warnings of Moses. The last plague was retributive justice. They had murdered hundreds of the Jewish children, but now their own were cut off by thousands at a stroke. This determined Pharaoh to let them go.—Exodus, xii. 29—33. It is in commemoration of this night that the feast of the Pass-over was instituted. Yet even now Pharaoh repented him and followed the Israelites, only to see them miraculously carried through the Red Sea, and he himself with all his host swallowed up in its merciless flood; and now it was that *Miriam and her train* came forward with dance and

timbrel, singing,—“Sing ye to the Lord, for he hath triumphed gloriously.” Yet three days after we find them “murmuring” because the waters of Marah were bitter waters. In these deserts water is very scarce, and often bitter or salt. They had already forgotten the deliverance—the Red Sea—the exemption from the plagues. They murmured when they should have prayed. The water was graciously sweetened by a miracle, for God loved his peculiar people. In the wilderness of Zin we again find them murmuring against Moses and Aaron, and longing for the fleshpots of Egypt. Here, too, they forgot God; but he did not forget them. No! he fed them with manna daily and plentifully. Following the pillar of cloud they journeyed to Rephidam. Here again they wanted water, and the unbelieving Israelites again tempted God to forsake them by wishing themselves in Egypt and in bondage; but his love was enduring, and he gave them water out of a rock.” A rock, said to be the one struck, is still pointed out to travellers, in which are numerous small holes through which the water flowed. The Amalekites, descendants of Esau, “a people that strike,” inhabited and still inhabit that country: as Isaac prophesied, they “live by the sword” (Gen. 27—40). They were a numerous people, and fought with a few Israelites; but in vain. Moses prayed—Israel fought; and God protected his own. At Sinai God made known to Moses the laws which the children of Israel were to obey, and there Moses received directions how to

build a tabernacle in which to worship God. It might have been hoped that while Moses was on the Mount the children of Israel would employ themselves as children of God; but no, although the pillar of cloud stood before them, they went to Aaron demanding that he should make new gods, that should lead them to the Promised Land, for of this Moses they wot not what had become of him. Aaron yielded to their intreaties, and thus idolatry was added to their other sins—open, gross idolatry. But Moses, the gentle forgiving Moses, was their intercessor—came between them and an angry God, who accepted the sacrifice, and the laws contained in the first seven chapters of Leviticus were made known.

The numbering of the people took place in the wilderness, when it was found, that in this their second year, the descendants of one man, Jacob, himself not born 366 years before, had, notwithstanding the Egyptian servitude, and efforts to crush them, reached the astonishing number, women and children included, of three millions. The multitude now resumed their march, conducted by the pillar of cloud by day, and the pillar of fire by night; but the Israelites frequently tempted God by murmuring and forgetting all his mercies; they grew weary of manna, and desired flesh. God granted their request, sent quails in abundance, and while the meat was in their mouths they died. At last they arrived on the borders of the Promised Land, and a man from each tribe was sent to examine it. After forty *days they returned*, bearing with them one bunch

of grapes so large that it required two men to carry it, describing the country as rich and fertile, but full of the tall sons of Anak. Caleb and Joshua alone urged their going forward, the other ten greatly feared. Again the people wept, murmured, and wished themselves in Egypt; threatened to kill Moses and Aaron, and were only prevented by a manifest declaration of God's displeasure. The punishment awarded by God was to remain in the wilderness forty years, until all, save Joshua and Caleb, should be dead. It was during this time that many fell by the Amalekites, and that Dathan, Korah and Abiram were swallowed up for their sins, and here God made it manifest that he had chosen Aaron and the tribe of Levi to minister before him.

During the wanderings of the Israelites, many important events had taken place in the surrounding nations, and many changes; but Canaan, the Palestine, remained as now, the same, awaiting the arrival of its chosen people. At length, in the year 1452 B. C., and the thirty-eighth of their wanderings, the Israelites arrived on the borders of Canaan. There Miriam died, — she had watched over the infant Moses; sung the praises of God at the Red Sea, and journeyed through all their difficulties, but was not permitted to enter with her people into the Promised Land, — here too Moses lost his confidence in God, smote the rock, offended, and brought punishment on himself and Aaron. During the following two years the Israelites were often engaged in war.

had many difficulties to encounter, and often sinned against the Lord by murmuring and rebellion; it was during that time, in their progress onward, that Balak sought Balaam to curse them; but how could Balaam curse whom God had blessed? Still he strove to do so, and met his reward. The prophecies of Balaam have been literally and strikingly fulfilled. At Mount Hor Aaron died, not unwillingly; he was not permitted to see the long-desired land, and submitted patiently. At last, after innumerable difficulties, the Israelites encamped on the north of the Dead Sea. The Land of Promise was within a few hours' journey; but Moses was not to enter it: he saw it from Mount Pisgah, died, and was buried of the Lord in a valley, near the mount where he died. Joshua was now appointed to lead the people into the land that the Lord their God had given them: he and Caleb alone remained of the twelve who had been sent to examine the land. It was necessary to cross the deep and rapid stream of Jordan; but the moment the feet of those who bore the ark touched the water, it no longer flowed, and they passed over on dry land. The first place the Israelites approached was Jericho, a large and strongly fortified city, surrounded by a high thick wall. How were they to obtain possession of it, "without arms, without ladders, or any other necessary means of attack?" In Joshua vi. we learn how they were directed to make their assault — no doubt, greatly to the amusement of the inhabitants. *But Joshua believed, and at the end of the*

seventh circuit, on the seventh day, while the walls were still standing, and all appeared unmoved, he cried, "Shout! for the Lord hath given you the city." They shouted, and the walls fell! The city lay open before them, and "every man (went up) straight before him." Now this was faith and the reward of faith. Jericho was utterly destroyed. It had long been a very sinful city, and a curse was pronounced against him who should attempt to rebuild it. A curse literally fulfilled, when Hiel defied the threatening in the day of Ahab, 1 Kings, xvi. 24.

The extraordinary and triumphant siege of Gideon, as well as the conquest over the Hittites, the Perizites, the Jebusites, the Canaanites, and many other nations, are all so beautifully related in the twelfth, and nine following chapters of the book of Joshua, that to them the young Christian is referred for a detailed account of the assistance given by God to this his own peculiar family and people, and how literally and fully he performed his promise given to Moses, "I will drive them out of the land before thee, until thou be increased and inherit the land." Exodus, xxiii. 27.—30. And again, "Thou shalt consume all the people which the Lord thy God shall deliver thee," &c. Deut. vii. 16—24. The wars between these nations is no common history, but one that tells of the execution of a dreadful sentence of divine wrath against an utterly depraved and wicked people: we are expressly told, "For the wickedness of these nations the Lord doth drive them

out before thee." Deut. xyiii. 12. The idolatrous and sinful practices into which the Israelites afterwards fell, proceeded from their having spared some of these wicked people and permitting them to live among them. Joshua having settled the tribes, and seen the people in possession of the land, called them together, exhorted them strongly to avoid all approaches to idolatry, reminded them of the great things God had done for them, and urged them to "choose that day whom they would serve," and having fulfilled his appointed duties, died, being 110 years old, and was buried in Mount Ephraim.

The decease of Joshua was soon followed by that of Eleazer and other elders. They were now without a leader; anarchy and confusion soon followed. Intercourse with idolaters soon corrupted the Israelites—"every man did what was right in his own eyes," the lusts of the flesh, and the lust of the eye were gratified, the progress of wickedness was rapid and extensive. A son of Levi willingly engaged to perform idolatrous services, and while the son of Eleazer was High Priest "the children of Israel did evil in the sight of the Lord, and served Balaam," "forsook the Lord God of their fathers," "served Baal and Ashtaroth, so the Lord delivered them into the hands of spoilers." Judges, ii. We find them brought repeatedly into servitude. Othmel, the first Judge, delivered them from the king of Mesopotamia, Ehud from the king of Moab, Shangar from the Philistines, and the stately Deborah from

the Canaanites. About forty years after this, the Midianites, Amalekites, and other tribes, (whose manners the Bedouins of the present day resemble, and whose numbers were so great that they are represented as grasshoppers over the land) entered Judea, and spread themselves over all the fertile districts, penetrating to the shores of the Mediterranean sea; from these terrible marauders the Lord himself raised up a deliverer. "The sword of Jehovah and of Gideon" conquered; the undisciplined hordes, filled with panic and fear, turned on each other in the darkness of the night; they fled, and Israel was again free. Gideon was appointed judge; after his death an unworthy son became judge, when the oldest and perhaps the most beautiful fable extant, that of the trees choosing a king, was recounted by one who had escaped from him. But the children of Israel still pursued evil courses to a fearful extent. The Philistines and the Ammonites were permitted to make a permanent invasion into their country, lay waste their lands, and take their children into bondage. From this they were delivered by Jephtha, who was judge in Israel until about the time that Samson was born; whose extraordinary strength, wonderful acts of valour over the Philistines, folly in committing his secret to a bad woman, and the peculiar manner in which he revenged himself in his death, is well known and beautifully related in the sacred writings.

Eli was the next judge of Israel: he held that office forty years, and presents an awful and

striking lesson to parents. A good man, in whose family great attention was paid to the Divine institutions, but an over-indulgent, weak, and therefore bad father, who did not *restrain* the wicked courses of his profligate sons, which is described as "the iniquity which he knoweth." Eli was very old when the ark of the Lord, committed to the care of his sons, was taken and his sons slain. This was a gloomy day for Israel; no wonder the old man and his daughter-in-law both died; the ark for the first time was in the hands of the enemies.

The young Samuel, whose affecting history is familiar, appears to be the first of that succession of prophets who were raised up by the Jewish nation. During the administration of Samuel, national piety was in some degree restored, and with it national prosperity. The Philistines no longer troubled Israel, and Samuel governed in peace for twelve years after the first assembling at Mizpeh; but the fickle nation now grew weary of judges, and, contrary to the judgment of Samuel, desiring to have a king, Saul, the Son of Kish, was chosen by lot, and very soon after engaged in warlike actions with the Philistines, Amalekites, and others; but his pride and disobedience to the commands of God brought him into continual difficulties, and proved that he was a very unfit person to govern Judea. The encounter of the young David, the son of Jesse, with the formidable Goliath of Gath, and its consequences are well known to the Scripture reader. So are his friend-

ship for Jonathan and his marriage with Michal; but none of these could repress the envy or extinguish the hatred that dwelt in the proud monarch's breast. David was obliged to fly from his presence, closely pursued by, and often in much danger from, Saul. It was during this long and cruel persecution that the greater number of David's beautiful psalms were written. David was ever ready to forbear and pardon the cruelties of Saul, and on one occasion resisted the temptation of killing him when asleep in his tent; for, in all his wanderings and backslidings, David still had firm confidence in the power and goodness of God. The enmity of Saul against the son of Jesse did not arise from any injurious conduct on the part of the young man, neither was it the effect of madness, but the workings of an unregenerate evil heart, at enmity with God. The life of Saul was very turbulent, and the latter part rendered particularly so by the Philistines. Hence we find him in his perplexity consulting with wizards, magicians, and soothsayers; he had, indeed, departed from the living God, and God left him to his enemies, who fastened his mutilated remains to the walls of the city, and placed his head in the temple of Dagon. Four hundred years had now transpired since the settlement of the Israelites in Canaan; a period presenting a history widely differing from that of every other people on earth. Continually a prey to powerful enemies — continually threatened with extinction — they were still preserved. A separate people, an improving, increasing, se-

parate people, notwithstanding every concurring circumstance that could lead to an opposite result. David was by the death of Saul free from danger, and seven years after was made king; his first care was to bring the kingdom into order; he removed his family to the city, which he had built after gaining the stronghold of Zion, and called it Jerusalem; he removed the ark from Gilead to Jerusalem, and this is supposed to have given cause for the 24th, 132nd, 105th, 96th, and 106th Psalms; he planned the Temple, was successful in war, and provided for the family of Saul: hitherto all was right, David served the Lord, and the Lord prospered all his ways; but David grew indolent, and indolence led to adultery and murder; he married the widow; but the reproof of Nathan awakened his sleeping conscience; his repentance was deep and sincere, and the birth of Solomon was a pledge of forgiveness; but peace was no more for David; his sons grew up rebellious and sinful; like Eli, he had been a fond, but careless parent: too late he wept this fault; his darling, Absalom was slain in the wood of Ephraim, and three years famine succeeded: the Philistines took up arms, and, contrary to the Divine precepts, David numbered the people, now amounting to 1,300,000 fighting men; for this crime heavy punishments followed; feeble and wasted, his grey hairs brought down with sorrow to the grave, he gave his son Solomon directions, explaining the plan he had designed for the Temple, and slept with his fathers.

Solomon succeeded his father, and began his reign by offering a thousand burnt offerings, and humbly confessing he was as a little child, prayed not for earthly goods, but an understanding heart. His prayer was answered: "his wisdom far excelled that of the most renowned sages of his time;" his judgment was clear, his government strong and prosperous; his dominions extended from the Mediterranean to the Euphrates, — from the Orontes to the Red Sea and the Persian Gulph; he "had peace on all sides around him." In happy alliance with Hiram, king of Tyre, who supplied him with many materials, the Temple was completed and dedicated to Jehovah with grand solemnity. All Israel assembled on the occasion; the ark was borne within the vail by the Levites, and "the glory of the Lord filled the house." Solomon then ascended a throne of brass and offered up a prayer, at once fervent and pathetic, solemn and full of humility, the language of a sinner at the footstool of Divine mercy. 1 Kings viii. Solomon here seems to be a type of the Saviour, the intercessor for his people before the throne of grace. Solomon also built himself a palace, of which he says, "I builded me houses — I planted me vineyards — I made me orchards and gardens — I planted trees in them of all kinds of fruit — I made me pools of water to water therewith the wood that bringeth forth trees." Eccl. ii. 4. The only remains of these works that now exist, are the pools of Solomon, situated to the south of Bethlehem. The Divine Songs of

Solomon, the Proverbs, so full of piety, charity, prudence, and benevolence, and the excellent system of ethics set forth in them, all attest his wisdom, piety, and humility. The pen lingers — it is painful to turn from a picture so rich and glowing in “the beauty of godliness,” to the luxurious, idolatrous, lascivious monarch, surrounded by a harem of 700 princesses, and 300 of lower rank, going after the idols they worshipped — burning incense and offering sacrifice with them — until he provoked the Lord to declare that the kingdom should be rent from his family; one tribe only should be left, the united tribes of Judah and Benjamin, in which Jerusalem was situated, and this was spared for his servant David’s sake, from whose family the Messiah was to proceed. “The seed of him that loveth him he will not take away; wherefore, he gave a remnant unto Jacob, and out of him a root unto David.” Thus rested Solomon with his fathers.

Solomon left but one son, called Rehoboam, who must have been born the year he came to the crown, and who, it appears, never gave his father much of hope or comfort, or reason to expect good of his future character. From the early days of the Jewish nation, there had existed an envious, unhappy feeling between the sons of Ephraim and the sons of Judah; the pre-eminence gained by the latter had ever been offensive to the other tribes. Before, therefore, receiving Rehoboam as king, they sent for Jeroboam, who was an exile in Egypt, to propose such measures as

they judged necessary. Rehoboam hesitated, and the unruly spirits of the leaders at once renounced all allegiance to the son of David. Choosing Jeroboam as their king, Judah and Benjamin alone remained faithful to Rehoboam. Jeroboam introduced a new religious system throughout the ten tribes: appointed Dan in the north and Bethel in the centre, as places for sacrifice, instead of Jerusalem, and set up "calves" of gold, which quickly introduced idolatrous worship among a people but too ready to follow after strange idols. The Levites refused to assist at this, and Jeroboam himself officiated as priest. A prophet from Judah denounced his unholy altar, which was shaken by an invisible hand, and the arm of Jeroboam withered. The alarmed king prayed the prophet to restore his arm, but did not pray to God to restore his heart; on the contrary, continued his idolatrous courses. Rehoboam, in the mean time, took prudent measures for strengthening his kingdom, receiving those who were driven from, or grew weary of the revolted provinces, and during the three years that he continued in these good courses, his kingdom flourished, and the blessing of God was upon him; but he then fell into idolatrous practices, and was punished by an invasion of Shishak, king of Egypt. Rehoboam died after a reign of seventeen years, and Abijah, his son, reigned in his stead. Although the provinces under Jeroboam formed by far the larger portion of the Israelites, yet the promised seed being in the tribe of Judah, the part left with Rehoboam must be

considered the Israel of God. The government of Jeroboam ended in his son, who was killed by the Philistines, and although the kingdom of David was divided, it may be observed through the whole history of Judah and Israel, that the Lord Jehovah exercised the same direct, providential interference with both branches as heretofore, and the Jewish nation was still, in effect, a theocracy. Asa was a good man and king, who rooted idolatry out of the land, and many flocked to him from Israel, "where they saw that the Lord his God was with him." Jehosaphat, his son, followed the "way of David and his father; his heart was lifted up in prayer to the Lord;" he fortified the cities, and sent priests and Levites through the land to instruct the ignorant; and thus the Lord made "even his enemies to be at peace with him." It was at this time that Ahab, king of Israel, was led into so great wickedness by the beauty and fascinations of the imperious and sinful Jezebel, daughter of the king of the Zidonians, and aunt of Dido, the foundress of Carthage, that we are told "he did more to provoke the Lord God of Israel to anger than all the kings of Israel that went before him." Then rose up the prophet Elijah as a light out of dense darkness; "and his word burned like a lamp." While the hills were yet smoking with sacrifices to Ashtaroath and the groves resounded with the wild music of their rites, Elijah suddenly appeared and announced that no rain should fall for three years. Long did the holy man remain hidden from the furious Ahab,

first among the rocks, fed by the birds of the air, and refreshed by the stream that ran at his feet, then sheltered and miraculously fed in the hovel of a poor widow, who revered him as a prophet, a follower of Jehovah, and willingly shared with him what appeared to be her last meal. But his God and Master manifested his power and the love he bore his servant, by answering of prayer, by sending fire from heaven, by the death of the idol prophets, and by sending rain on the the earth. Jezebel had witnessed all this. She saw the earth refreshed, famine stayed, and her subjects rescued from starvation, but she hated Elijah, and resolved on his death; because her prophets were no more; those who had ministered to her pleasure were gone; but the Lord will not forget his own; death was not for Elijah; he escaped and dwelt in rocky Horeb for a time, then dwelt in the valley of Jordan. Soon after this, both Ahab and Jezebel came to an untimely end, and agreeably to the word of the Lord, "dogs licked their blood."

The striking events of the prophet's life and death, or rather his translation, together with those of his servant Elisha, during the reigns of Ahaziah and Jehu are so well known to the young reader of Scripture, that all repetition were useless.

Jeroboam second, king of Israel, died 793 B. C. He recovered the district east of Jordan, and by conquests from the Syrians enlarged his dominions to Damascus. It was during his reign that

the prophets Hosea and Amos wrote. Hosea foretold the judgments to be sent upon Jerusalem, and carried his views forward even to the coming of Christ in the flesh. Amos saw, in vision, the destruction of the idolatrous temple of Samaria. It was a dark and dismal period in which there "was no truth, nor mercy, nor knowledge, in this land." In Judah, Uzziah reigned long and prosperously: he was skilled in the arts of war, yet he loved the peaceful occupations of husbandry. The Olympiads began to be celebrated in Greece during the reign of Uzziah. It was in the last year of Uzziah that Isaiah was called to the prophetic office. Joel also prophesied at this time. The early portions of the prophecies of Isaiah speak of the judgments then at hand, — of the oppression of the rulers, — the vanity and pride of the Jewish females. The state of Judah is represented under the parable of a vineyard, Isa. v., a striking illustration of a people whose vineyards clothed the hills on every side. Jotham succeeded his father as king of Judah. He became mighty, because he established the ways of the Lord. He built a new gate to the Temple and improved Jerusalem; but the voice of Micah was heard, "Arise ye and depart, for this is not your rest." During the reign of Jotham, Rome was built, B.C. 753; that city by whose power Jerusalem was finally destroyed. Ahaz succeeded Jotham, an idolater; and worse than any preceding king of Judah. In his reign the king of Assyria carried away captive the tribes beyond Jordan, and some of the

inhabitants of Israel: this was the first captivity. The last days of the kingdom of Israel were now close at hand. Unwillingly the Lord gave up his people, but they would not have him for their God. The reign of Hezekiah was very important. "Like unto him was there no king before him." In the first days of his reign he opened the Temple, and assembling the priests and Levites charged them to cleanse and set in order the house of God without delay. The idols were destroyed, and the people showed their faith by their fruits. At this period, the first universal monarchy, that of Assyria, was at its most palmy state. Involved in war with Egypt, but still a mighty power, Canaan, from its situation between the contending powers, was often the cause, and sometimes the seat of war. Hoshea, king of Israel, had formed an alliance with Egypt, and refused to continue tributary to Assyria. In the fourth year of Hezekiah, Shalmaneser, king of Assyria, besieged Samaria, and after a siege of three years took it, and utterly destroyed Samaria, beautiful in its situation, and rich in its fertility. He caused all that remained of the seven tribes between Jordan and the sea to be carried away to a remote part of his dominions, far in the East, where many of their descendants still continue. In the fourteenth year of Hezekiah, Sennacherib invaded Judah, but Hezekiah purchased peace by the payment of a large sum. Soon after he proceeded towards Jerusalem, Isaiah, xxii. 1.; but though close to the holy city, Sennacherib shot not an arrow

against her walls. A miraculous blast in one night struck 185,000 of his army with death, and he was afterwards murdered by his own sons while at worship in an idol temple. Hezekiah reigned twenty-nine years, and then departed in peace, and was honourably buried in the "chiefest" of the sepulchres of the sons of David. These sepulchres are supposed to be an elaborate work cut out of the solid rock, and still existing to the north of Jerusalem. This is the only remains of ancient Jerusalem which can be traced satisfactorily. Here are several rooms with recesses for bodies, and places for sarcophagi, with doors, one of which Maundrell found with hinges on it, and in its place.

The accuracy of history with the predictions of prophecy are too remarkable to pass unnoticed. Babylon, Tyre, Egypt, and Idumea, are all precisely in the state in which the book written 2000 years since described they would be; in fact an accurate account of the downfall of various nations may be drawn from predictions written while they were in their bright and palmy state. The most wretched reign in the kingdom of Judah was that of Manasseh, son of the good Hezekiah; he restored all the idol worship, sacrificed children to Moloch, and committed acts of the deepest depravity. It is supposed that Isaiah, who was secretary to Hezekiah, addressed the prophecy to Shebna, recorded in Isa. xxii. 15., while superintending the workmanship of a sepulchre, which, giving offence to the proud apostate, Isaiah was

seized and sawn asunder with a wooden saw. Many years after, the crimes of Manasseh, "that which he did in Jerusalem," are mentioned as a primary cause of the Jews being driven from all the nations of the earth. Jer. xv. 4. In the twenty-second year of his reign the Assyrians, under Eserhaddon, invaded Judah, and carried Manasseh a prisoner into Babylon: he also took away the remnants of the tribes left in Israel. The duration of Manasseh's imprisonment is uncertain: he, however, returned to Jerusalem, fortified it, died, and was buried. Josiah was a righteous young prince, and did much to restore the worship of the living God, causing a more solemn passover to be observed than during any former period. In his reign the prophets Jeremiah, Zephaniah, and Habakkuk wrote their prophecies. In a battle against Pharaoh Necho, on the plains of Megiddo, Josiah was mortally wounded: he died, and the "Lamentations of Jeremiah" record his virtues. It is said of Jehoiakim his son that he "did evil in the sight of the Lord:" he was but the king of a subdued people, and a vassal to Nebuchadnezzar, king of Babylon, who, in the fourth year of his reign, besieged and took Jerusalem, and carried away some of the sacred vessels which he placed in the temple of Belus at Babylon, also some of the princes and nobles, among whom was Daniel and his companions. This may be considered the beginning of the Babylonish captivity, B.C. 605.

Yet the Temple still towered above its spacious

courts, and the walls of the city remained; but a further judgment was to come. In the year B. C. 597, Nebuchadnezzar again invaded Judea, dethroned the son of Jehoiakim, and made Zedekiah king in his stead. A large number of captives were then sent away to weaken the resources of the rebellious land: they were taken to Babylon and to various parts of Mesopotamia: among them was the prophet Ezekiel. The Jewish nation still did evil. Zedekiah revolted against the Assyrians, and joined the Egyptians. This caused the siege and destruction of Jerusalem, B. C. 586; when, after a frightful scene of slaughter, all that remained of the inhabitants of the land were cleared away, except a few of the poor, who were left as vine-dressers and husbandmen. Of the fugitives dispersed through the country, many of them died by their own hands. (Jeremiah, xl. 7—13. xli. 11.) Many of the survivors went into Egypt, where they perished; others fled into adjacent countries. Thus disappeared from Palestine those sinful people so often rebuked by the prophets; but no invading troops occupied the land. Judea was suffered to remain uncultivated during the captivity: the country was left vacant, not colonised by heathens as Samaria had been, nor occupied by a population arising from the scanty remnant left by their conquerors. Thus Nebuchadnezzar was overruled, and acted contrary to his usual policy. But thus and thus only could the denunciations of the prophets be fulfilled. The Divine declaration had

gone forth. The ten tribes were *not* to return to their possessions; therefore a heathen colony was permitted to settle therein. The tribes of Judah and Benjamin *were* again to occupy Jerusalem and the land of their forefathers; therefore that country was reserved for them. No opposition was offered to their return; they could all dwell in their cities without fear or difficulty. At the time when the Jews were thus led into captivity, the two ruling powers over the then known world were the Babylonians and the Medes. The dominions of the latter were over the country east of the river Tigris. The former comprehended all that had been the Assyrian empire, together with countries towards the west. Babylon was the capital of this large empire instead of Nineveh, of which no traces now remain. It was the desire of Nebuchadnezzar to render the vast city of Babylon, which was situated in a plain and divided into two parts by the Euphrates, rich and populous. He therefore treated the Jews with more respect and consideration than they might have experienced had his city been fully peopled. Daniel and his companions were very young, not more than eighteen years of age, and Nebuchadnezzar caused them to be instructed in the Chaldee language, changed their names to such as sounded well in the palace of Babylon, familiarised them to heathen customs, and did all in his power to fit them to fill high stations, and forget the land of their fathers; but Daniel and his companions were influenced by the fear of Jehovah, and their his-

tory instructs young people in the immense importance of avoiding compliance with the sinful pursuits of those around them. Ezekiel also was among the captives, and his book of prophecies will be read with great interest by all who have, or may observe how literally they were fulfilled. Of his death there is no account; but a building a few miles south-east of the ruins of Babylon is even yet pointed out as his tomb.

Nebuchadnezzar appears to have been raised up an instrument in the hand of God to perform this his work of punishment. Hence he is called "the rod of God's anger," and "the servant of Jehovah." He subjugated all the nations round Palestine, and carried his army into Egypt, besieged and destroyed the powerful city of Tyre, and laid the land desolate for forty years. Having completed the conquest of the then known world, Nebuchadnezzar returned to Babylon as its acknowledged master, B. C. 570, which was the beginning of his universal dominion; but his visions, dreams, and impiety, recorded by their living witness the prophet Daniel, was cut short by perhaps the most awfully striking event on record, and this mighty monarch became "as a beast of the field." Belshazzar, his grandson, did not profit by the fate of his grandfather, but lived a few years in riot, extravagance, and debauchery, notwithstanding the warnings of the prophet, until alarmed by the handwriting on the wall, when too late, for very soon his kingdom was taken from him by Darius the Mede, who placed Daniel at the head of his go-

vernment, which produced such burning jealousies among other influential Jews, as led to the trial of the prophet's faith and firmness, and produced another instance of God's preservation of his own faithful and devoted children. When Darius had reigned only two years, he died, and his nephew, Cyrus, who had been designated by name more than a century prior to this, as the conqueror of Babylon, and the restorer of the Jewish nation from captivity, Isa. xlv. 14., reigned in his stead. Cyrus continued to favour Daniel, and to give great advantages to the Jews, who now filled almost every post of honour or renown. All through the captivity, though Nebuchadnezzar by his conquests mixed up in one mass as it were all the nations of the earth in Babylon, the Jews continued to dwell there a separate people, from the depressed days of their early captivity, till now, when the spoils of their land were to be seen in their temples, and the chief men of the state were Jews. At this time, it is clear from ancient records, they were visited, consulted, studied, and respected, by all the philosophers of Europe and Asia. Among one of the earliest acts of Cyrus, after attaining the full sovereignty, was that decree named by Ezra, i. 1—4., authorising the return of the ancient people of Jehovah, in which he says the Lord God of heaven had charged him to rebuild the Temple: he therefore offers them every assistance. There was but little to tempt the Jews to return to the land of Judah, and very much to induce them to remain. Josephus speaks

of the ten tribes remaining beyond the Euphrates as so exceedingly increased, that in his day they could scarcely be numbered ; but where are they now ? Recent travellers speak of districts peopled by Jews, in an ignorant degraded state ; wherever they have incorporated with other nations, they have fallen off. But there are yet a few who have not bowed the knee to Baal, Israel still dwells alone as "a nation among the nations." The Jews have a proverb that "the bran returned to Jerusalem, the fine flour remained in Babylon." Of the twenty-four courses of the priests, only four returned. The first division was led by Zerubbabel, a prince of royal blood, called in Ezra Sheshbazzar, and in Haggai Zechariah ; these were four thousand five hundred in number, and the work of erecting the Temple commenced as soon as they arrived. They were brought back to the very spot where their former stately building had waved its tower above the courts, and though they had difficulties, every prospect of a goodly temple was before them.

The Samaritans, colonists placed in the country of the ten tribes by Esarhaddon, who worshipped God in conjunction with idols, were desirous of helping the sons of Judah ; but they refused the unhallowed union, and the building was consequently stayed ; thence grew that bitter hatred of the Jews towards the Samaritans, that they would not allow a Jew to have any dealings with a Samaritan, which we find recorded in the New Testament. The building of the Temple did not pro-

ceed for ten years. The people had been busy in preparing houses for themselves, and making to themselves vineyards and olive-grounds. Cyrus was dead, and Darius Hystaspes sent home many more of the Jews, who brought valuable offerings for the Temple. The building was resumed, and the city became large and populous; and in the sixth year of Darius the Temple was completed, and the passover celebrated there. Sacrifices and sin-offerings were offered by the Prophets Ezra and Zechariah, who both prophesied at this time of the future Messiah, the Saviour of men. The Jews had a high respect for Ezra, who spent much time in Jerusalem in collecting the Scriptures and remodelling the laws. It was while he was so employed that a wicked plot was formed by Haman to destroy all the Jews in Persia. The plot was discovered by Mordecai the Jew, and frustrated by the prudence and courage of Esther: the tale is beautifully related in the Book of Esther. The Jews commemorate this deliverance to the present day by their Feast of Purim. At the site of the ancient Ecbatana, an ancient tomb, containing two sarcophagi of dark wood, richly carved, are said to be those of Esther and her uncle Mordecai.

From this time we find the Persian monarchs favouring the Jews. Nehemiah was permitted to repair the walls of Jerusalem: this was completed in fifty-two days; but he had much to suffer from the Samaritans and other enemies. Still he persevered in building up the high places, and

restoring Jerusalem to her ancient splendour. But wickedness was again making rapid strides among this rebellious and stiff-necked people. Marriages had taken place between them and the sons and daughters of the surrounding idolatrous nations. The Sabbath was no longer a holy day sacred to the Lord; they had "corrupted the covenant of Levi," and taken to them many and strange wives; so that their language became a mongrel speech of Ashdod, Moab, and Ammon.

After the death of Nehemiah, Judea was governed by high priests, of whom little that is good can be recorded.

The Jews now became so connected with their rulers, the Persians, that their history, for some ages, can only be gleaned from that of Persia.

During the rapid and extraordinary conquests of Alexander, we find him hastening on with intent to destroy Jerusalem, which event, according to Josephus, was prevented by the prayers of Jaddua and the people, so that, when Alexander saw the multitude in white garments, and the priests in their robes, he offered obeisance as an act of adoration. The next day Alexander demanded what favours the Jews required: Jaddua besought that they might be allowed to live according to the laws of their fathers. Alexander granted all he asked, and promised the same for the Jews of Babylonia and Media. Had Alexander lived, much might have been done to prevent the division of the nation; but according to the prophecy, that a mighty prince should stand up,

"his kingdom shall be broken, and shall be divided toward the four winds of heaven," he died, and his kingdom was divided between his generals. Under the distracted government that followed the Jews suffered severely, as well as under Ptolemy Lagus and Antigonus; the former of whom, hearing the Jews were so scrupulous in their observance of the Sabbath as not to defend their city, entered it on that day, and committed dreadful outrages. The priests are described at this time, with the people, to be in such close adherence to the law, as to suffer death rather than break its precepts. They had only one fortified city in their own land, in which was a small square building with two doors, a square altar of unwrought stones, a golden candlestick, and altar for the priests, where they were employed night and day in performing certain purifications.

The dominions of Alexander were now divided between Cassander, Lysimachus, Ptolemy, and Seleucus. Ptolemy received Syria, India, Egypt, Arabia, and part of Asia Minor. Under him the Jews enjoyed quiet, and the high priest "Simon the Just" finally completed the canon of the Old Testament: he was succeeded by his brother Eleazer, in whose priesthood Antigonus Sachæus, a man of great piety and learning, urged so strongly the doctrine of serving God from principles of love and affection, and regard for the divine perfection, that his disciples eventually detained the resurrection, and, from a popular man among them named Sadoc, they were called Sad-

ducees, and were among the most bitter persecutors of the early Christians. Simon II. succeeded to the priesthood in the reign of Ptolemy Philopater. This king would have defiled the sanctuary at Jerusalem, but was prevented by a sudden loss of the use of his limbs, an inflammation for which he revenged himself on the Jews in the most cruel manner, by putting to death all who would not apostatise: they were sent in chains to Alexandria, crowded into the hippodrome and trampled to death by elephants. Great numbers were drowned in the Nile. This monster in man form died, and was succeeded by Antiochus the Great, under whom the Jews found sorrow and protection: he sent colonies of them to Lydia, Phrygia, and other parts, the descendants of whom were found by the Apostles in Asia Minor, as mentioned in the Acts. At this time the Romans were become a very powerful people, the fourth kingdom, "strong as iron," were making great incursions into Greece, and the Eastern kingdoms were rapidly bending before them. Antiochus being joined by Hannibal, opposed the Romans and was defeated by them at Thermopylæ, and again at Magnesia: in attempting to plunder the temple of Jupiter Belus, he and his escort were slain, B.C. 187. On the accession of the successor, Antiochus, the Assyrians flattered him with the title of Epiphanes, or "illustrious;" but his insane, cruel, and disgraceful conduct caused him to be changed to "madman." Though a profane atheist, he pretended great reverence for J

Olympius, and tried to force the Jews into a worship of that deity: not without effect: the Jews again fell into idolatrous practices; some from examples, others influenced by fear, others hoping to escape persecutions; yet disturbances arose, and Antiochus hastened to Jerusalem, took it by storm, and plundered the city. In a massacre which lasted three days, 40,000 were slain, and as many taken prisoners. The Syrian king entered the sanctuary, plundered it of all its gold and silver, caused swine's flesh to be sacrificed on the altar, and defiled the whole building by sprinkling it with the liquor in which the flesh of these abhorred animals had been boiled; daily sacrifices were prohibited, the public observance of the Jewish religion discontinued, and idols set up, and sacrifices offered to them, on the altars which had been raised to the God of Israel. A decree was sent out that it was unlawful to worship or use customs that were not in conformity with those of the Greek heathens. The Jews were compelled to go in procession to Bacchus, carrying ivy. Mothers who had caused their infants to be circumcised were with them inhumanly butchered; while others who had gone together into caves to keep the Sabbath day, were discovered, and all burned together, refusing to defend themselves on that sacred day. The Maccabees, destined to be their deliverers, were of the tribe of Levi, descendants of Asmoneus, hence called Asmoneans. Mattathias was at the head of the family, and with his five sons, Johanan, Simon, Judas, Eleazer,

and Jonathan, excited beyond further endurance, went through the streets crying, "Whoever is zealous for the Lord and maintenance of the covenant, let him follow me." Many flocked to their standard, and an open rebellion ensued. The enraged Antiochus pushed his cruelties to greater extremes than ever: every torment that a demoniacal spirit could devise was resorted to. These sufferings are described in detail, and with such horrifying minuteness in what is termed the fourth book of Maccabees in "the Apocrypha," that to these records the young reader is referred. The sons and followers of Mattathias continued to increase, and under Judas Maccabeus, the blessing of the Most High went forth, the Lord of Hosts sustained his army, appeared in favour of his own people, and again the Jews were free. The pages of history contain repeated instances of successful national resistance, when the feelings of the people have been thoroughly excited by oppression and wrong, particularly religious oppression; but the resistance and ultimate triumph of the Jews, unaided by any other country or people, stands unequalled, almost, if not entirely alone, and wonderfully shows forth the power of the Lord of Hosts exerted in behalf of his people. The 9th chapter of Daniel is considered by Hales to describe the events of this reign.

From this time, 143 B. C., the Jews reckon the independence of their country. Simon was then high priest and leader, and "the land of Judah was quiet all the days of Simon." To him suc-

ceeded John Hyrcanus, who demolished Samaria, and continued to increase in power and enlarge his dominions until they equalled those of David and Solomon in extent. He built a palace or castle in Jerusalem, in which the Asmonean princes lived. Judah now again ranked high among nations; but a worm was ever at the root, and the Pharisees and Sadducees introduced new religious dogmas, while luxury, and its accompaniment, tyranny, made rapid strides. So that Whiston remarks: "Now follows the profane and tyrannical Jewish monarchy: first of the Asmoneans or Maccabees, and then of Herod the Great, the Idumean, until the coming of the Messiah." After the death of Hyrcanus, we find the Romans very troublesome to the Jews, and as they were then pushing their conquests over all the face of the earth, having conquered Greece, they led their troops into Asia Minor. At the same time that Egypt was sinking under their power; Tadmor, in the Wilderness, built by Solomon; Tyre, the pride of nations and the seat of commerce; Damascus, the mother of manufactures; and Jerusalem, the city of the Lord, all fell before the Cæsars and their victorious generals. Asia Minor, in common with other countries, became tributary to Rome, and Herod was appointed ruler. Herod signalled his reign by erecting stately buildings, particularly one on Mount Zion; he rebuilt Samaria and called it the city of Augustus. The whole nation of the Jews were required to take an oath of allegiance to Augustus, whose power it

was useless to dispute ; thus the sceptre, in effect, departed from Judah. The temple of Janus was shut, and universal peace reigned over the earth. And now, in rapid succession, came the most important events. The vision that appeared to Zecharias in the Temple ; the Annunciation made by the angel Gabriel to the Virgin Mary ; the birth of John the Baptist ; and the birth of Jesus the Messiah, at Bethlehem, the true Shiloh, the Prince of Peace, had now come, and the sceptre had departed from Judah. Believers among the Jews, in all ages, had respect to the promised Messiah ; yet they rejected him — would not receive the Lord of life and glory, but crucified him betwixt two thieves : thus drawing on themselves the ruin of their city and Temple, within forty years after Christ had uttered the prediction, that not one stone of the Temple should stand upon another. Titus drove a ploughshare over the site of Jerusalem ; they were dispersed throughout the Roman empire, and have remained scattered to the present time. Still they have ever remained a separate and distinct people, and have ever been allowed to set up a synagogue wherever they dwelt. A late traveller observes : “ In looking at the barren hills of Judea, where the beast wanders not, the bird flies not, and the grass grows not, the impress of the curse of God may be seen in more dreadful characters than are to be seen elsewhere on this side the grave.” “ Zion is a wilderness — Jerusalem is a desolation.”

AFRICA.

THE peninsula of Africa forms one of the great divisions of the world, the outlines of which are very clearly defined. It was known to the ancients, and the theatre of many remarkable transactions upwards of 3000 years ago. Yet very little either is, or ever has been, known of this mysterious country. Our ships have for three centuries sailed round its lands, and visited various parts of the border, which, like a fringe of comparative civilisation, surrounds this peninsula; but of the vast interior, its past or present history, we are still ignorant. With the exception of Abyssinia, Sierra Leone, and the country near, and that part of South Africa which extends from the Cape of Good Hope to Ruveechane, no part of Africa has been explored by the Christian missionary. The curiosity of Science is baffled in her searches. Commerce is arrested in its progress by insurmountable barriers; even conquest itself has been turned aside by fiery deserts and impassable mountains. By far the greater part of this large continent is enveloped in darkness; its history, and the origin of its inhabitants utterly unknown.

There seems to have been but two aboriginal tribes. Of these are the inhabitants of the mountains, called by the ancients Ethiopians, by the moderns, Negroes; and the inhabitants of the plains, known to the former as Lybians, to the latter as Barbarians. Of the four great continents, Africa is the lowest in the moral and intellectual scale, and dividing the continent into four quarters, the northern ranks lowest in Christian or moral advantages. On the eastern side, through Egypt and Abyssinia; on the west and around the Cape, the missionary labours and efforts at improvement have worked, and are working much real good, spiritually and temporally. On the south-east coast, and in Lower Guinea, their labours have been owned, and civilisation and Christianity are spreading, though slowly; but in the north, the obstacles opposed to the preaching of the gospel are numerous, and apparently insurmountable. Dr. Munter affirms, that the Christian faith was introduced by some Christians from Rome, as early as the second century; but in so, every trace of it is gone. The greater part of the African tribes are Fetish worshippers, and believe in witchcraft and conjuration: they adore a good and an evil principle. In some parts of the north, and in central Africa, the doctrine of Mahomet prevail. Egypt has been called "the connecting link between Africa and the civilised world:" it belongs to classic and sacred history; yet some slight notice may prove interesting. The discoveries of Burckhardt, Belzoni

Hamilton, Gosling, and others, have lifted the veil from her mysterious hieroglyphics, and brought the present generation into familiar acquaintance with her pyramids, temples and caverns, gods, mummies and amulets; the last fifty years has thrown more light on these subjects than preceding ages. Within a few generations after the deluge, Egypt had become a great nation, under the government of a monarch, and was acquainted with trade and handicraft. Agriculture was the employment of a large portion of the inhabitants; the pastoral occupations too were followed; mechanical arts were not unknown; houses were built of brick, and the bodies of the dead very curiously embalmed. Strangers bartered with them for corn, giving spices, pearls, and stones: they were in this position when the brethren of Joseph were driven by famine from the parched plains of Syria into this fertile and plentiful land. The kingdom of Thebes, in Upper Egypt, is supposed to have been founded soon after the dispersion of the sons of Noah, though the name does not occur in the sacred writings. The seat of monarchy was afterwards transferred to Memphis, and so continued until about 567 B. C., when it was destroyed by Nebuchadnezzar. The ancient periods of Egyptian history were preserved by hieroglyphics, known only to the priests, who affirmed that they could trace their history through a period of 50,000 years. Menes, they said, was the first king of mortal birth; all before him had been immortals. Inroads appear

to have been made by tribes of Phœnician and Arabian origin; these latter were the shepherd kings who are said to have governed Egypt 511 years. Sesostris is said to have lived in the time of Moses: he conquered Libya, invaded Asia as far as the Indian ocean, fortified Egypt, dug canals, built temples, and covered the land with columns, obelisks, and arches. After him came Remphis, Cheops, and Cephren, the builders of the pyramids which still stand the wonders of the world. About 617 B. C. this country became involved in wars with Southern Asia. Josiah king of Judah, being in alliance with the Assyrian king, refused to let the Egyptian army pass through his kingdom: a battle was fought in the vale of Megiddo, in which Josiah was killed. Many kings and princes followed until Psammenitus, who was the last native sovereign of Egypt. Thus has the prophecy of Ezekiel, ch. xxx. 13. been fulfilled, "There shall be no more a prince of the land of Egypt." On the death of Alexander the conqueror of Egypt, Ptolemy Lagus, afterwards called Sotor, attained the viceroyship. He beautified Alexandria, and made it the capital of his dominions; added Palestine, Syria, and Phœnicia to his dominions, and died 284 B. C. He was succeeded by Ptolemy Philadelphus, who founded Ptolemeus and built the pharos or lighthouse. During the succeeding reigns of Ptolemies, the country was torn to pieces by a series of civil contests, and exposed to disgusting scenes of vice, extravagance, and every dreadful enormity. "I will set the Egyptians

against the Egyptians, and they shall fight every man against his brother, and every one against his neighbour." Isaiah, xix. 2. The death of Cleopatra closed the dynasty of the Ptolemies, which had lasted 294 years, and Egypt became a Roman province. Christianity was introduced into Egypt at an early period; for there was, at the outpouring of the Holy Ghost in Jerusalem, proselytes from Egypt, Libya, and Cyrene; and the extensive commerce of Alexandria, and its proximity to Palestine, would offer an easy entrance for the Gospel. In this land of superstition the first example of a monastic life was given by Anthony of saintly fame; and so well did it please the Egyptians, that in a short time nearly half the men were monks; but the church of Alexandria became corrupt at a very early date. For several centuries Egypt was governed by the descendants of Omar as a Mahomedan province. In 1171 Saladin, a man of great power, resolution, and ambition, assumed the whole command while a vizier, and in 1173 proclaimed himself king: not being a descendant of Mahomed, he could not be called kaliffe. Saladin turned his arms against the Christians, and performed prodigies of valour, not only in defence of the cities already in possession of the Christians, but against those possessed by the Turks also, until he had reduced nearly the whole of Palestine under his control. All Europe now roused themselves, in order to rescue a country so dear to every Christian from the hands of infidelity. For three years, the Crusaders were baffled

in all their attempts; but the Crusade in which Richard Cœur de Leon of England joined Philip of France was destined to be more successful. Richard was the most intrepid warrior Saladin had yet encountered, and his success proportionate: the whole sea coast from Jaffa to Tyre was surrendered to the Christians, and the Pilgrims of Europe travelling to Jerusalem were to be protected by Saladin himself. After these and other concessions, a truce for three years three months three days and three hours, was concluded, and the remainder of the armies returned home. From this period the history of Egypt is totally without interest until 1250, when the Mamelukes, a band of Circassian slaves, who had been trained to war, drove the Sultan ab Saleh from the throne, and usurped the government, which they held until 1517. Selim, the Turkish sultan, attacked them, and overthrew their government, establishing a kind of republic, in which the Mamelukes had considerable power for nearly 300 years. Egypt was the scene of violent contention; sometimes under a sort of independent government, but more frequently under various tribes of Turks, and sometimes under that of the Porte. In this state it was when, in 1798, the French under Bonaparte landed at Morabou with 5000 troops, marched to Alexandria, put to flight its Arab and Mameluke defenders, and made himself master of the city. He then called together the Turkish chiefs, and assured them his only desire was to rescue the country from oppression, professing at the

same time the highest respect for the Moham-
medan religion ; but while thus professing friend-
ship he rapidly made himself master of one town
after another, until the whole of Lower Egypt
was under his command, from which they were
only driven by several years of severe contest on
the part of the British, in which those English
heroes Nelson and Sir Sydney Smith were con-
spicuous and brilliant actors. During this ex-
traordinary conflict, some acts of Bonaparte were
marked with such savage cruelty and reckless
breaches of truth and honour, as must ever stain
his name and character with blood. But the in-
ternal state of Egypt has undergone an important
revolution since these transactions, a revolution
brought about by the extraordinary talents and
energies of Mahomed Ali. Mahomed Ali Pasha
was born in Cavallo, an ancient town in Mace-
donia: his father was at the head of the police,
and Mahomed engaged in the tobacco trade ; but
during the French invasion he became an officer
in the Turkish forces, and under the auspices of
the English soon became distinguished by a daunt-
less bravery, that placed him at the head of every
expedition. In the first place, his plans seem to
have had no other end than the desire of command
in his corps ; but the ease with which he attained
one step after the other, awakened ambition, and
led to power, aided by the stepping-stones of force
and fraud. Mahomed had not enjoyed the ad-
vantages of education : even reading and writing
were attainments of later life, and seldom brought

into use. Endowed with a keen sense of what best and most expedient, he at all times entered with avidity into every extensive plan, and had no scruples of conscience to withhold him, brought them to a successful termination. With Mahomet a new epoch dawned upon the East; literature and science promised to travel hand in hand with Islamism; and though the means used may always have been defensible, yet the result raised a lasting monument to the memory of instruments.

ABYSSINIA.

This country corresponds to the southern part of ancient Ethiopia. The natives disdain the name of Abyssinia, which comes from the Arabians, a mixed people. They call themselves Agazians, and their country Agazi, or Ghazal. Their history mounts to a period about 1000 years B. C., from Arwo, the Serpent King. They reckon five dynasties: but their history is completely mingled with fable, and nothing known on which reliance can be placed. That the Christian religion was introduced into Ethiopia at a very early period, is proved by the account given of Eunuch in Acts, viii. 26. Yet it does not appear to have flourished, but to have been opposed by the Jews and the Kerishites until about 500, when several missionaries proceeded to Abyssinia and for a time fanned the expiring embers

Christianity into a flame, which was however afterwards crushed by hordes of Musselmen; so that their mountains alone enabled the poor Abyssinians to maintain their natural character or their religion. They were an unsettled people, frequently engaged in wars, and apparently without trade or commerce, until the 14th century, when some Abyssinian priests, who visited Europe, gave such a favourable account of their country, that the Portuguese were induced to visit various parts of the African coast, in the course of which the Cape of Good Hope was discovered, and the Portuguese became allies of the Abyssinians, and assisted them in repelling the attacks of a Mahomedan chief who reigned in the kingdom of Arras, eastward of Choa. Many Catholic Missionaries gained access to this country during its connection with Portugal; but about the end of the 16th century we find the Emperor Socinius abjuring the Christian faith, and expelling all Christian agents, priests, missionaries, &c., from the country, which from that time was less accessible to the Europeans. In 1796 Bruce visited Abyssinia. Its next European visitor was Salt, in 1805, and again in 1809; and it is to these travellers alone that we are indebted for our present imperfect acquaintance with Abyssinia.

BARBARY.

Barbary is one of the regions of Africa earliest known in history. The Phœnicians appear to

have navigated its coast above 1000 years before Christ. In 886 B. C. a colony of this people under Dido, founded the far-famed city of Carthage. The Romans, after the destruction of this city, disputed the possession of the country with the Moors, Numidians, Africans, and Lybians. Having at last made themselves masters of it, they divided it into five provinces — Pentapolis, Cirta, Mauretania, Africa Propria, Numidia, and Mauritania. In the time of Constantine a part of the country had become a province of Egypt; another part was a province of Spain; and the country between was known as Africa. In the 4th century the Vandals made themselves masters of the Roman possessions in that part of the globe, and marked their progress by blood and devastation. In the early part of the 5th century Belisarius recovered the part of Greece, recovered Barbary, and re-annexed it a part of the Greek empire; but in 697 it was subdued by the Mahommedan Arabs. The Saracens now governed northern Africa, and under them the arts and sciences flourished, and everything wore a pleasing aspect. From thence the Saracens or Moors passed over into Spain, succeeded in planting their standard in a valuable province. They, however, gradually declined, and were obliged to seek the aid of the Turks; and these people laid the foundation of those piratical states in Barbary which so annoyed and robbed every Christian power in the Mediterranean. To such a height had their piratical boldness gained, at one period, that Moorish cruisers acted

lay under Lundy Island, in the Bristol Channel, to rob traders going from Ireland to the fairs at Bristol. Soon after the subjection of Barbary to the Caliphs it was divided into a number of petty sovereignties, which, though frequently changing, still continue.

MOROCCO.

Morocco was the Mauritania of the Ancients, and long under the dominion of the Romans. After the destruction of the Roman empire it fell to the Goths, from the Goths to the Vandals, from the Vandals to the Greeks, from the Greeks to the Saracens. After this they were divided and subjugated by the Fatamites, the Zuheirites, and the Maravedi, whose ecclesiastical and political sway extended from Algiers to Timbuctoo and Soudan, for eighty years. They were, in the 11th century, overpowered by the Almohades, whose princes assumed the titles of Caliphs. After something like a century, intestine discord laid them open to the incursions of other tribes; until, about the middle of the twelfth century, a descendant of Mahomet seized the sceptre which he bequeathed to his own family, who, notwithstanding frequent revolutions, have preserved the sovereignty of Morocco until the present day. Mulay Israhman ascended the throne in 1822. The soil of Morocco is fertile, rich, and loamy. It is measured, except by the cattle and the burn-

ing of stubble ; yet they frequently gather sixty fold in their crops. But the Moors cultivate no more than they require, and that with as little trouble as possible ; yet their country abounds in fruits of every kind ; oranges, lemons, and grapes grow in their fields and hedges. Oaks, olives, and various kinds of timber grow remarkably large and fine. Iron mines have been wrought, and the Atlas mountains contain valuable metals. To an industrious enterprising people, such a soil and such resources would be invaluable ; but the Moors are intrinsically idle, and possess neither ingenuity, spirit, nor enterprise, to improve the native riches of their productive country.

ALGIERS.

This country was, in the earliest period of authentic history, divided between two nations, the Massyli, on the side of Africa Proper, who were the subjects of Massinissa, and the Mas-sæsyli, towards Mauritania, who were under the dominion of Syphax. On the defeat of Juba by Cæsar, this country became a Roman province. In the sixteenth century the Spaniards invaded Algiers, when the Algerines called to their aid the celebrated corsair Arnek Barbarossa, who, by various acts of cruelty, injustice, and oppression, made himself master of the country, and with his successors gave it the bad eminence of a piratical state, which it held until chastised by the British

fleet a few years since. For several centuries the Algerine corsairs, or pirates, were the terror of Europe and Asia, scouring the Mediterranean from coast to coast, and committing all kinds of depredations and cruelties. James II., William III., and George II., endeavoured to bring them to reasonable terms of treaty; but the outrageous conduct of the Barbary pirates broke all treaties, and called forth the indignation of the principal maritime powers in Europe. In 1775 the Spaniards made an attempt at reducing them, but failed for want of cordiality among the commanders. In 1783 another effort was made, but proved equally fruitless. In 1816 a British fleet was sent out under Lord Exmouth. The Algerine fleet was reduced to ashes, the batteries silenced, and one half of the town destroyed, and no course left to the Bey but to cast himself on the mercy of the British Admiral. The terms imposed were severe, but just; and Lord Exmouth had the satisfaction of giving liberty to 1211 slaves, among whom there was not one Briton. No sooner, however, had the Algerines recovered a little from this severe infliction than they resumed their piracies, and committed many outrages upon French and Austrian vessels. In 1830 an expedition was fitted out by France, and succeeded in reducing Algiers, which now belongs to that country, to which, as lying opposite to Marseilles and Toulon, must be one of the most desirable countries in the world. We may now hope that the present miserable race of barbarians who occupy Mau-

ritania will become amalgamated with Christian nations, and thus extend knowledge and civilization together with the sweet and peaceable doctrines of Christianity, that the religion of the cross may flourish over one of the fairest and most interesting tracts of this earth's surface.

A GENERAL SURVEY
 OF
 THE HISTORY OF EUROPE.

EUROPE is the smallest of the general divisions of the globe. It is said to have been peopled by Japhet, a son of Noah; but of its early history very little is known. The first accounts we have are those of Greece about the 19th century; but these are so mixed with fable that very little can be learnt from them, until about the middle of the 4th century, when Athens was founded by Cecrops, and soon after Lacedæmon by Lelex. Thebes and Corinth followed; and in the early part of the 26th century we find Italy becoming a kingdom, but so mingled with fabulous history that we cannot consider any of the facts really historical until the founding of Rome in 3251; and even in this, something of fable mixes. As the Romans became a people and nation fable disappears, and their restless ambition soon brings

us acquainted with the nations of the North, which have since supplied such ample subject for the page of history, and among whom at this day are the greatest kingdoms of the known world.

RUSSIA.

Russia, as the largest of the northern nations, demands our first attention. This monarchy is supposed to have been founded by Ruric, who built the city of Ludaga in A.D. 862, and Christianity to have been introduced about 988. The cities of Wladimir and Warsaw were built about 1156 by Juric, or George I.; but the history of Russia is nothing but a detail of uninteresting wars with their neighbours the Tartars and other savage tribes, until about the year 1540, when John Basilowitz reconquered it from the Tartars, to whom it had been many years subject, and restored its independence.

About the middle of the 16th century the Russians discovered and conquered Siberia, under their king Feodor, who dying in 1660, the royal line became extinguished, and the country was for twenty years torn and convulsed by wars; when Michael, a descendant from the family of Romanof, was elected Czar, with hereditary powers. This prince had much to contend with; but he put down or destroyed all opposers. About 1653 a war with the Turks commenced, which was continued under Alexis till 1681, who established

the first posts in Russia in his reign. Iron and copper mines were first wrought; silk and linen manufactures commenced; internal navigation improved; and the first vessels sent to the north of Asia. His son Feodor humbled the nobility, and annihilated their pretensions, by artfully burning their pedigrees and archives. Peter, his step-brother and successor, was a man admirably calculated by nature for making progress with a nation yet in barbarism. What Philip had been to Macedonia, Peter became to Russia. His first aim, on coming to the crown, was the forming an army modelled on European tactics. To accomplish this he spared neither time nor trouble. Under his father Alexis he had helped to build and navigate a ship; he now studied ship-building as an art, established dockyards on the Don, and in 1696 equipped twenty-three galleys, besides other vessels, with which he defeated the Turkish fleet. After this he travelled through Europe in search of information, worked as a common ship-builder at Amsterdam, and for three years in the English dockyard. Nothing was too low, nothing too high for the observation and aim of Peter. He wielded equally well the hatchet and the lancé, the pen and the sword. While in England Peter won the esteem of all ranks of people, and is said to have observed, that if he had not been Czar of Russia he would have wished to be an English admiral. He returned to Russia, carrying with him upwards of 500 English engineers, artists, and mechanics, all of whom he immediately employed.

in the most advantageous manner. Peter now devoted himself to the finances of the state, and the introduction of civilisation and modern European dress, manners, and customs, among his people. In 1700 he declared war against Sweden, and found no mean enemy in young Charles XII., who, however, fell at the siege of Pultowa in 1709, which again restored peace for that time; but the whole reign of Peter was a scene of war and contest with Sweden, which however ended, in 1721, greatly to the glory, honour, and interest of Russia.

Peter died on the 8th of February, 1725, and was succeeded by his wise adviser and excellent wife Catherine, who survived him but two years, and was succeeded by the Empress Anne, widow of the Duke of Courland, and daughter of Peter the Great. After her the Empress Elizabeth, a younger sister, a woman of bold and masculine mind, filled the throne. In July, 1762, Catherine II. widow of Peter III., a princess of Anhalt Yerbst, ascended the throne. Catherine was a woman of bold licentious manners, faulty as a private character, but great as an Empress. Her reign may be regarded as the most glorious and prosperous in the Russian annals. Among her earliest acts was a confirmation of the peace made by Peter III. with Russia. Indeed the whole reign of this Empress was marked by the encouragement given to civilisation, sciences, arts, navigation, and military education. She founded new towns, concluded commercial treaties, divided her

empire into governments, revised and augmented the laws, and even formed a code of her own; lowered the taxes, relieved the poor from many cruel oppressions of the nobility, and bestowed many favours and privileges on the non-Catholics under her protection. She was successful in her wars with Turkey, Prussia, and Austria; and, fearful of the English dominion on the seas, she formed what was called the northern neutrality, in 1780, during the North American war, in which she was joined by several northern countries and states. The Ottoman Porte, however, was increasingly embittered towards Catherine by all these acts. The Crimea was a matter of constant dispute and contention. Catherine steadfastly refused all Prussian and English interference, and finally concluded a treaty, and made peace with the Porte herself, in December 1790, by which Russia obtained Oxzakof and the lands between the Bog and the Dniester. On the conclusion of the Turkish war Catherine again turned her eyes on Poland, and in 1793 a territory of 86,800 square miles was added to the Russian empire, and such grievous restrictions imposed on the remaining part of Poland as caused a formidable rebellion at Warsaw, headed by Kosciusko; but it was useless. A third partition took place in 1795; and Russia extended her already gigantic dominions, which now reached from the shores of the Baltic, in one line, to the western end of North America and the Japan Islands.

The administration of Catherine was successful in the extreme. She conducted the affairs of a vast but semi-barbarous empire through a very critical period of European history, and left it to her successor with an annual revenue doubled in its amount, an aggrandisement of territory amounting to 240,000 square miles, and an immense army and navy. She died in November 1796, and was succeeded by her son Paul I.

The annals of Eastern despotism do not exhibit the history of a more capricious, tyrannous, or detestable monarch than Paul of Russia. His long-suppressed hatred of his mother burst forth after her death, and revenged itself in every act of cruelty and rebellion towards those persons or institutions she had favoured. The chief of the secret police soon became, next to the terrible Autocrat, the first person in the realm; and their united cruelties, follies, and madness, exceed the powers of the pen to describe, or imagination to conceive. In all his transactions with foreign powers, the part he took in the wars then extending through all Europe, and the harshness with which he treated his own nobles, was displayed the same insane and cruel self-will and thirst for power. Under such a government, conspiracies would naturally be formed against the power and even the life of the monarch. Under one of these, at the head of which were three of the Subof family and three of his own generals, Paul was assassinated in his own bed-room, hated by all, regretted by none, on the 23d of March, 1801,

and was succeeded by his eldest son, Alexander I., a man of very different and superior character, who did much to restore the laws and regulations of his grandmother Catherine.

The senate and cabinet were recognised, oppression ceased to be felt, intercourse with foreign countries was renewed, and peace and prosperity reigned around. Alexander, however, soon found himself engaged in harassing and expensive wars, sometimes in conjunction with, sometimes in opposition to, Napoleon Bonaparte, who was then pursuing his meteor-like course. The political horizon frequently changed its aspect, and Alexander his views; yet, on the whole, he added to the dignity, wealth, and already enormous extent of his empire. The unfortunate expedition of Bonaparte to Russia in 1812 hastened the crisis of political affairs. In July, 1815, Alexander entered Paris for the second time; and, after the signing of a general peace, visited England, in company with the King of Prussia and others. In 1820 he banished the Jesuits from Russia and Poland, as well as the large order of Freemasons. Alexander died suddenly at Taganrok, on the 1st of December, 1825, not without strong suppositions of having been poisoned.

Constantine, the next brother, and heir to the throne, having resigned his claim from a conscious ~~weakness~~, his younger brother, the Grand Duke Nicholas, ascended the throne in July, 1817. He married the Grand Duchess Alexandrina of Prussia, a lady of a strong mind, sound judgment;

and pure morals, by whom he has several children, and who, it is said, possesses the strongest influence over him, which is ever exerted for his welfare and the general good. Hitherto the reign of Nicholas has been peaceful and prosperous: he stands well in general esteem, though it is his cruelty towards Poland darkly shades his character.

DENMARK.

The three northern kingdoms, Denmark, Sweden, and Norway, were anciently known under the common appellation of Scandinavia; but about the time that the power of Rome began to decline, they became known by their depredations as Northmen, or Normans. They established themselves, under Rollo their leader, on the coast of Normandy, founded two kingdoms in England, peopled the Feroe Islands, the Orkneys, the Shetlands, Iceland, and part of Ireland; and finally reached Spain, Italy, and Sicily. Everywhere these warriors spread the glory of their name; but they sadly tarnished its brightness by their fierceness, and the cruelty of their princes. The German kings of the Carlovingian race, hoping to check the progress of these marauders, interfered in their policy, which only served to draw them more closely together, under the name of Norwegians and Danes. Gorm subjugated Jutland in 920, and united all the small Dani

states under his own sceptre, thus forming the kingdom of Denmark.

About this time the Christian religion was introduced by a missionary into Denmark, but struggled long with the worship of Odin. In 1016, Canute the Illustrious, great grandson of Gorm, conquered the whole of Norway, completed the conquest of England, and subdued a great part of Scotland. Under him Denmark attained its highest pitch of glory: religion began to gain an ascendancy over the horrid rites of Odin, and the blessings of social life to be universally acknowledged. Canute died in 1036, leaving a mighty kingdom to weak successors. In 1042 England shook off its allegiance, and Norway followed the example.

In 1047, Magnus established a new dynasty, which deprived the government of all power, drained the resources of the country, and reduced the peasants to a state of bondage; ruined agriculture, and threw commerce into the hands of the German Hanseatic towns. Valdemar the Great was the only vigorous ruler of this dynasty; but he had too much to contend with, and in 1241 divided his weakened kingdom among his sons. This only produced new internal divisions and disputes with the powerful Hanseatic towns, all tending to weaken the state.

After the death of Olav IV., Margaret, his ~~son's~~ daughter of Valdemar III., took the reins of ~~the~~ government. This princess, so justly famed in ~~the~~ Northern history, succeeded in uniting the crowns

of Norway, Sweden, and Denmark, in 1386 which in 1397 was solemnly ratified by the union of Colmar. This union was, however, unfortunate in its issue. New disturbances and troubles broke out in Sweden and the German provinces, which were found difficult to subdue.

In 1448, Christian I., of Oldenberg, founder of the present family, was elected by the Danes and obliged to conclude a treaty with the States in which he acknowledged Denmark an elective kingdom, but united Norway, Sleswick, and Holstein with the crown of Denmark.

He was succeeded by his son John, in whose reign the union of Colmar was dissolved, 1523 and his crown wrested from him by the Danish and Norwegian nobility, who placed his brother Frederic on the throne. Frederic, however, found a bed of thorns and a drink of bitter water among the haughty aristocracy, while the oppressed and injured peasantry were often in open rebellion.

After his death, Christian III. mounted the throne in 1534. He divided Sleswick and Holstein with his brothers John and Adolph; the latter of whom became the founder of the house of Holstein-Gottorp; but this partition proved a fertile source of family disputes.

The reigns of Frederic II. and Christian IV were full of wars with Sweden and other powers to the great injury of Denmark.

In 1648 Christian was succeeded by his son Frederic III., a man of considerable courage and ability. Frederic soon found himself engaged in

a war with Charles Gustavus of Sweden, who, aided by the Dutch, would probably have made himself master of Denmark, had not Cromwell, the English Protector, interposed in favour of Frederic. After several treaties, broken by either the Dutch or the Danes, England eventually succeeded in effecting a peace between them, by yielding considerable territory to the Dutch and Swedes.

Until 1660 the monarchy was elective, but the choice was confined to the reigning family. The power of the king was extremely limited, while that of the nobles was exorbitant. The commons had hitherto borne the burden of the government; but the kingdom was now exhausted by the war which had just terminated. An assembly of the States was therefore called, and, after much contention and difficulty, the crown was declared hereditary in the female as well as male line; and in 1665 the king, by virtue of the powers conferred on him, promulgated the *lex regia*, a royal line, by which the kings of Denmark were declared absolute, and this has ever since been the fundamental law of Denmark. Under Frederic IV. commerce began to revive; and the death of Charles XII., in 1718, put an end to the struggles with Sweden, after which a peace of nearly one-hundred years ensued.

Frederic V. began to reign in 1746, and was early pressed upon by the formidable Peter of Russia. He was, however, a man of great courage and judgment, and on Catherine's accession he

entered into negotiations and arrangements highly advantageous to Denmark, by which the ground of dispute between the different lines of Holstein and the kings of Denmark were effectually removed.

Christian VII. ascended the throne in 1766, and lived until 1808; but the greater part of that time he was deranged, and for the last twenty-four years his son Frederic had governed. The reign of Christian was during an important period of European history. The early part of his reign was disturbed by Struensee, a man of great talents and restless overbearing disposition, who was eventually brought to the scaffold in 1792. Denmark obtained for herself the honour of being the first European power that proscribed and forbid the horrible traffic in slaves, which had been carried on to a great extent.

During the French revolution Denmark maintained a strict neutrality, until about 1800, when, finding herself hemmed in by the other powers, she joined the northern armed neutrality. On the death of Paul, however, which changed the politics of Russia, both Denmark and Russia entered into a treaty with England, which treaty was soon broken, and Denmark was obliged to resign all her fleet into the hands of the English, until a general peace should be concluded. In 1807 Denmark entered into a treaty with France, and declared war against England and Sweden, by which, however, she gained nothing but loss and trouble; for Bernadotte, finding himself be-

tween the great allied powers of Russia and England, entered into treaties with both, and after the battle of Leipzig compelled the Danes to enter into a peace with Sweden and Great Britain. At the general peace of 1815 Denmark obtained Lauenburg and a sum of money from Prussia, in exchange for Pomerania and Rugens; and the king entered into the German confederation, in which he holds three votes in the duchies of Holstein and Lauenburg. Since that time to 1848 Denmark had enjoyed a profound peace, and in some degree recovered her commercial prosperity. But the revolutionary spirit, which so suddenly spread itself over great part of Europe, has broken out in Denmark, and will probably produce important changes; for a bad government and limited resources are fatal enemies to confidence or improvement, and require great prudence and energy to restore peace to a dissatisfied excited people.

SWEDEN.

The aboriginal inhabitants of Sweden were of Finnic and Lapponian extraction. They appear to have retreated to the higher latitudes before the advancing population of the German nations. They were governed by chiefs sprung from the illustrious family of Odin. From the 5th to the 10th century we find them assuming the name and governing as kings of Upsala. In 994, Olof em-

braced Christianity, and formed a regular government. In 1250, the powerful family of Folkunger mounted the throne, and the succession was fixed in their family; but, tired of their oppressors, the Swedes revolted, and in 1363 gave the crown to Albert of Mecklenburg. He, however, soon fell in a battle against the Danes; when Margaret, queen of Denmark and Norway, united Sweden to them, which was confirmed, in 1397, by the treaty of Colmar. Troubles, rebellions, and various changes were produced by this union, until, in 1520, Christian II. of Denmark, having invaded Sweden, was recognised as king by the Swedish States, but soon became obnoxious to his subjects by his cruelty and treachery.

Among the hostages who had been treacherously carried prisoners to Denmark was Gustavus Vasa, one of those superior daring and undaunted spirits, which, when united with high intellect, seem formed by nature for grand and mighty exploits—to command the whirlwind and direct the storm. Gustavus placed himself at the head of his discontented countrymen, and, having driven the Danes out of Sweden, was, in 1523, proclaimed their king, and the succession secured to his family. Under Gustavus Vasa the Reformation was introduced and encouraged; the States of the Church added to those of the Crown; commerce and navigation were promoted by alliances with England and Holland; many independent conquests and additions were made to the kingdom; and prosperity and improvement took the places of anarchy

and confusion. After his death several members of his family succeeded with various success; but none of them very eminent, until Gustavus Adolphus ascended the throne in 1611, in the eighteenth year of his age. Under his management the kingdom enjoyed a degree of solidity hitherto unknown; although the progress of population and civilisation was checked by his frequent wars with Russia, Denmark, and Poland. In 1617 he concluded a peace with Russia, by which he gained Jugermanland; and in 1629 an armistice with Poland, by which he gained Livonia: the great object of his wishes was now within his power.

In June 1630, Gustavus landed in Pomerania with 30,000 men, and, being joined by several German Protestant Princes, gained the victory of Breckenfeld over the imperious general Tilly. From this time the influence of Sweden over the political destinies of the north-west of Europe was immense. Gustavus was every where hailed by the Protestants as their Deliverer. His glory and his schemes were, however, cut short at the battle of Lutzen, where, in all probability, he fell by the hand of a traitor in the hour of victory. Gustavus was succeeded by his infant daughter Christina, during whose minority the celebrated chancellor, Oxensterna, held the reins of government, and conducted the wars of Germany; in which the dukes, Bernard of Wiemar, Bannin, Wrangle, Kestensen, and Koningsmark exalted the Swedish name, and ended the contest gloriously for Sweden, adding very largely to her territory and her

possessions, her honour and her reputation. The distinguishing features in the character of Christina were eccentricity and inconstancy. She favoured learning and science, and affected a love of philosophic ease. After renouncing that religion for which her ancestors had suffered the loss of so much blood and treasure, and for which her noble father had sacrificed his life, she abdicated her throne in 1654, and retired to a convent in Rome, where she ended her inglorious days.

Christina was succeeded by her cousin, Charles Gustavus, Prince Palatine of Zweibrücken, who, after a turbulent and active reign of six years, restored peace to the North by his sudden death, and was succeeded by his son Charles, then a minor. Nothing particular occurred in his reign, which as usual was disturbed by war, until 1680, when Charles married Eleanor of Denmark, and passed the remainder of his reign in tranquillity. He died in April 1697, and was succeeded by his son, the famous Charles XII., then only fifteen years of age.

CHARLES XII.

Sweden was at the height of her glory when Charles came to the crown. He was absolute master of Sweden, Finland, Carelin, Ingermanland, Livonia, the Duchies of Bremen and Verden, the Isle of Rugen, and great part of Pomerania. His subjects were poor but loyal, brave and hardy;

his finances in excellent condition, and his administration in the hands of able and excellent ministers. But Charles, though a warrior, was no statesman; and his frantic exploits bear more the character of romance than of history. His reign of twenty-one years is but a succession of ill-directed wild warfare, tending little to the true glory of Sweden, and still less to the welfare of the Northern nations.

After the siege of Pultowa Charles fled to Bender, where he placed himself under the protection of Sultan Achmet III. After a residence of five years he suddenly appeared at Stralsund, demanding the restoration of Strettin, which William Frederic of Prussia had taken during his absence. Failing in this, and finding England opposed to him, Charles tried to enter into a negotiation with the Czar of Russia, hoping to indemnify himself by the conquest of Norway; but, while engaged in the siege of Fredericstadt, he was shot on the 13th of November, 1718. Upon the death of her brother, Ulrica Eleonora, his youngest sister, was elected queen, but was fated to find a throne thickly planted with thorns. Wars, disturbances, and revolts of every kind broke out around her. No sooner was one demand granted or one concession made, than another was demanded with greater impetuosity. Under the prevalence of the aristocracy two parties, distinguished as "Hats" and "Bonnets," distracted the council. The preponderance of the "Hats" brought on a war with Russia, in the midst of which

Eleanor died, and was succeeded by her nephew, Charles Peter of Holstein, who, with his successor Adolphus Frederic, held the government during a few years of turbulence and disorders. Gustavus III., son of Adolphus Frederic, ascended the throne in February 1771, and resolved by a bold stroke to put an end to the intestine divisions which had so long torn the country. He declared the constitution of 1680 to be again the law of the kingdom, and, relinquishing his unlimited authority, shared it with the four classes comprising the states of nobility, clergy, citizens, and peasantry. The energies of the kingdom now gained strength: commerce and industry revived, and every thing bore the semblance of prosperity. He was, however, soon embroiled in a war by their old enemy Russia, in which Gustavus displayed great courage and much political acumen and judgment. After obtaining many decided advantages for Sweden, Gustavus was assassinated at a masquerade by Ankerström, a deed doubtless prompted by the long hatred of the aristocracy. Gustavus was succeeded by his son, who, being a minor, his uncle, Duke Charles of Sudermania, was made regent. Charles acted with prudence and circumspection, and maintained the independence of the country against the threats of Russia, who insisted on forming the league against France. Gustavus took upon himself the sovereignty in 1800, and after the death of Paul entered into a treaty of commerce with Russia and England, and no longer able to conceal his dislike

of Napoleon, entered into a league with England against France in 1805.

Gustavus, however, was versatile, selfish, and deceitful; a violator of treaties, and a breaker of pledges; defending both England and Russia as it suited his purposes. A disadvantageous war with Norway exhausted its finances; and his bad conduct towards his own guards brought on his dethronement, in April 1809, when his posterity were for ever excluded from the Swedish throne, and the Duke of Sudermania mounted it, under the title of Charles XIII.; but as he was aged, and without an heir, Augustus of Sliswick was named by the States as his successor.

In January, 1810, Sweden joined the continental system against England; and in August of the same year Buonaparte forced them to elect his general, Bernadotte, Prince of Porto Corvo, heir to the throne, under the name of Charles John, and soon acquired a powerful influence in the direction of the government. By the peace of 1814 Sweden obtained Norway, and resigned Swedish Pomerania to Denmark. The Norwegians, indeed, made an attempt, under Christian Frederic of Holstein Sliswick, to form an independent kingdom, but only drew contempt on themselves. Charles XIII. died in February, 1818, and Charles John XIV. ascended the Swedish throne, though opposed by the Bourbon party. In 1824 Charles named his son, the Prince of Norway, viceroy of Norway; and in 1827, the Princess, daughter of Prince Eugène,

former viceroy of Italy, gave birth to a son, who had received the name and title of Francis Gustavus Oscar, Duke of Upland. Charles Joh died, after a useful and peaceable reign, universally respected, and was succeeded by his son Oscar.

NORWAY.

As early as the year 870 A. D., we find a Norwegian king or chief, Harold Haffager, the fair haired, spreading terror and desolation throughout the Hebrides. This chief founded that authority which the kings of Norway and Denmark so long held over the Orkneys. Olaf I. having been converted to Christianity in England, compelled his subjects to embrace that faith, which was supported by his successors. Norway appears to have been frequently subdued by Denmark, and then again to be governed by its own kings, until the latter part of the 13th century, when Margaret (daughter of Valdemar III.), Queen of Denmark, succeeded her son as Queen of Norway. From that time till 1814 the two kingdoms continued one government. At that time the King of Denmark, in his character of King of Norway, ceded the kingdom to his Majesty of Sweden, to be thenceforth united to that kingdom.

Norway is a cold, sterile, rocky country; but the natives are cheerful, happy, industrious, and good-looking. They are a moral, religious people

The king is the head of the Church. Norway has its own language, but cannot be said to possess any national literature. Its eminent men have written in Danish; but the Norwegians are not destitute of taste. Mathematics, natural history, and history are cultivated. Newspapers were established in 1803: the periodicals of Germany are likewise read; and they have a Royal Society of Science at Drontheim.

GERMANY.

Under the name of Germania, the Romans comprehended not only the wild country, covered with enormous forests, lakes, and morasses, which was bounded by the Danube, the Rhine, the German Ocean, and the Vistula, but also Denmark, Norway, Sweden, Finland, Livonia, and Poland. All these countries, forming one third of Europe, were inhabited by tribes whose features, manners, and language bespoke a common origin, and whom they believed to be an indigenous race, the immediate offspring of the soil, without adventitious mixture from other countries.

Whether the Scandinavian mythology was anciently that of the German is an undecided question: but we find in both the same gods; in both, Odin or Woden is the oldest: Friga, his wife, Thor, the god of Thunder, and many others, are objects of equal worship in both. The Romans first became acquainted with the Germans about

the year 640 of Rome, 111 before Christ, a wild tribe, calling themselves Cimbri, appeared on the Alps, and defeated the Consul Pa Carbo.

The Teutones were the next, who, crossing the Western, and the Cimbri and Ambrones the Northern Alps, were met by Marius, who defeated the Teutones near the place now Aix, in Provence.

When Cæsar had subdued the Gauls, and directed his victorious arms to the Rhine, he found a nation called Germans, whom Cæsar obliged to treat beyond the Rhine. The civil wars of Rome afterwards turned the attention of its generals from Germany; and the tribes, during the interval, made various inroads into Gaul. The guard of Augustus was composed of German troops. Tiberius advanced to the Elbe, and Germany would probably have become a Roman province if his successor Varus had not, by violent measures, destroyed the advantages which his predecessor had gained. The Romans under Germanicus made another attempt to gain a footing in Germany, but failed; and from this time different German tribes greatly distracted the Roman government. Whether the Goths, as is generally believed, were originally located beyond the Elbe in the extreme North, is uncertain: they are mentioned as appearing under Carracalla, 215, on the banks of the Danube. Here they mingled with other tribes, and extended to the north and towards the south-east. In 36

empire of the Goths was divided into two parts, —the kingdom of the Ostrogoths at the Black Sea, and the Visigoths in Dacia. Alaric, King of the Visigoths, took and pillaged Rome in 409.

The subversion of the Roman Empire in the West, under Genseric king of the Vandals, took place in 455; and in 476 Augustulus, the last of the Emperors of the Occident, was seized at Ravenna by Odoacer, chief of the German auxiliaries, who made himself king. Fourteen years afterwards he was conquered by Theodoric, and the Roman Empire in the West entirely destroyed. With the destruction of the Western Empire a new social constitution was introduced into Europe, which with its various forms and modifications appears among those of the present day. The period, from the destruction of the Empire to the discovery of America in 1492, is called the Middle Ages, during which new kingdoms and new constitutions were formed under the influence of the feudal system, the Christian religion, and increasing civilisation.

THE MEROVINGIAN DYNASTY.

Under the Merovingians the Franks sunk into decay, but revived in the family of Pepin, the last Merovingian king. Childeric III. was compelled to retire to a convent in 752, when Pepin was raised to the throne. Pepin died in 768, and was succeeded by his son Charlemagne, who through a

reign of forty-six years pursued one design ; y to unite all the nations of German origin into a political body, under one chief ; to establish the preponderance over neighbouring states ; to civilise them by the introduction of arts and science and, by abolishing the power of independent dukes to unite all the branches of government in his own person. In prosecution of this plan Charlemagne commenced a war against the Saxons, who had long struggled with his predecessors ; but it cost him thirty years of hard labour to tame the spirit and overturn the power of this gallant people, and to introduce Christianity among them. He obtained an easier conquest over the Longobards and united them to the crown of the Franks, and in 778 conquered Spain, giving it the name of the Spanish Marches. Soon after the imperial dignity, which had lain in abeyance since 476, was revived in the person of Charlemagne by Pope Leo, who placed the imperial crown on his head while kneeling at the altar in the church of St. Peter, in celebration of Christmas.

Thus the empire of Charlemagne extended from the Tiber to the Eider ; from the Ebro in Spain to the German Ocean ; and from the Atlantic to the Elbe and river Raab in Hungary. Charlemagne was not a mere statesman and a soldier ; he united to high talents in these characters a genuine love for the liberal arts and sciences, and did every thing in his power to promote their cultivation. He brought the clergy under a better discipline, administered the laws justly, and d

for a rude and barbarous age what a master spirit only could effect, and what can never be estimated too highly.

Charlemagne was succeeded by the only one of his sons who survived him, Louis le Débonnaire, a good-natured and highly devout man, but who possessed none of the high, rare qualities of his glorious father. Under him the kingdom was divided among his four sons, and rebellions and dissensions distracted every part. These were at last accommodated by the celebrated treaty of Verdun in 843; by which Lothar, as Emperor, was given Italy and Lorraine; Charles, France properly so called; and Louis, all Germany on the right of the Rhine. Thus Germany and France became independent kingdoms.

After the death of Louis the kingdom was again divided into three parts, called Bavaria, Franconia, and Alemannia, by his sons Carloman, Louis, and Charles-le-Gras, under whom, after the death of his brothers, it was again united, and he was also recognised as king of France. This lasted but a short time.

In 911 the Carlovingian race were extinguished in Germany, and in 919 Henry, Duke of Saxony, was elected as Henry I. Five Henrys, and one Conrad of the House of Saxony, succeeded each other, during which many changes took place. Disputes with the Popes arose: councils were held, and the Crusades were undertaken, and eventually proved advantageous to Germany by

increasing commerce, and developing a better political constitution.

HOUSE OF HOHENSTAUFEN.

Conrad of Hohenstaufen, Duke of Franconia, was elected to the crown in 1138: he was engaged in many struggles with his rebellious subjects; undertook a crusade, and died two years after his return from Palestine in 1152, and was succeeded by his nephew Frederic of Suabia, in whose reign the contests between the Guelphs and Ghibelines commenced. He undertook a crusade when almost seventy years of age, but was drowned in attempting to cross the Calycadmus on horseback.

Henry IV. succeeded his father, whose ambition he inherited, but not his spirit or his virtues. His reign was marked by his dishonourable imprisonment of Richard Cœur de Lion of England, who on his return from Palestine, being thrown by a storm on the Italian coast, was given up by the Emperor to his enemy, Leopold of Austria. He obtained possession of the Sicilian States in 1194, but governed with so much cruelty as to entail eternal ignominy on his name. Henry died in 1197, and was succeeded by his son Frederic, who was constantly engaged in quarrels and broils with the Pope. He was succeeded by Conrad, Manfred, and Conradin, who was taken prisoner by Charles of Anjou, and publicly executed at Naples, on the 29th of October, 1218. With

him expired the powerful House of Hohenstaufen.

Rudolph of Hapsburg, a man in every way fitted to hold the reins of government during so stormy a period, mounted the imperial throne. Rudolph united valour, gallantry, experience, and prudence in his character: he took and destroyed upwards of seventy castles, whose owners had made robbery their profession: he united the interests of three German electors with his own, by the marriages of his daughters, and obtained Bohemia from King Ottocar. He was succeeded by Albrecht, or Albert I., a man in every respect his inferior, — proud, selfish, and mean. He it was whom William Tell so nobly and so boldly opposed, and from whose tyranny he rescued his country.

Louis of Bavaria and Charles of Bohemia succeeded. The latter founded the University of Prague, 1348. He was succeeded by his son Wenceslaus, an arbitrary, whimsical ruler, who was deposed and succeeded by his brother Sigismund, a man of great talent, but faulty as his brother. It was in his reign that the celebrated Council of Constance was held, on account of the acknowledged improvement necessary in the church.

The doctrines of Wickliff had been brought to Prague by Jerome, who had studied at Oxford, and were now making great progress in Bohemia and Germany. A council was therefore convened, in 1414, at Constance; but that council incurred eternal infamy and hatred by the burning

of Huss and Jerome of Prague. They both died with Christian courage and fortitude; and the flame of their pile soon shed its glorious light throughout Germany, — persecution only adding fuel to the flame. Thus dawned that magnificently great and glorious day which was to shine so brilliantly over the sixteenth century.

In 1419 forty thousand people assembled on a mountain, to which they gave the name of Mount Tabor, and, with John Ziska at their head, held public worship, and took the holy sacrament, after the manner of the great reforming martyrs, Huss and Jerome.

Frederic III., Duke of Austria, was raised to the German throne in 1440. He reigned for half a century, during which a new order of things and mighty changes took place around him. The Byzantine empire was destroyed by the Osman Turks; Spain united by the marriage of Ferdinand and Isabella. Gunpowder was introduced; new universities instituted; and the art of printing introduced; the passage of the Cape of Good Hope first made, and America discovered. But Frederic took no part in all these great events and changes. Time was, however, bringing great things to pass. His son Maximilian, Archduke of Austria, married Maria, only daughter and heiress of "Charles the Bold" of Burgundy; thus uniting her rich inheritance with that of Hapsburg. Under the government of Maximilian Germany was divided into ten circles, for the better execution of the decisions

of the Imperial Chamber, before whom all complaints were to be brought,—a fine of 1000 gold marks having been imposed on all who should disturb the peace. But the Almighty was working his own work, and vain was the arm of man to oppose him.

The Reformation proceeded from the University of Wittemberg. Disaffection to the church of Rome was first excited by the scandalous sale of indulgences by the Dominican friar Tetzel. Martin Luther, a monk of the Augustin order, having been eye-witness of the corruptions of the Papal court at Rome, and disgusted with the sight, set himself to oppose Tetzel with great zeal and fervour. At first he only declared himself hostile to the sale of indulgences; but reasoning and reflection opened his eyes, and growing bold in the faith, he soon began to shake the Papal hierarchy to its foundation by the thunders of his eloquence and the unspeakable worth of his cause. The Almighty fiat had now gone forth; a quenchless beam of light irradiated the moral darkness with which Europe had been enshrouded for many centuries. Not the thunders of the Vatican, the ban of Papal princes, nor the voice of assembled councils, could any longer withhold from the minds of men the great principles of religious freedom and liberty of conscience. The new doctrines were boldly preached in the universities and in the pulpits, and spread themselves through Sweden, Denmark, Switzerland, and England. Translations of the Scrip-

tures were freely distributed. Luther and his friend Melancthon were followed by persecution from the Papal powers, and by thousands of admiring converts. The name of Protestants was given to the followers of the new doctrines, because they protested against the Diet of Spire, in 1529. At the Diet of Augsburg, in 1531, they were permitted to present their profession of faith, written by Melancthon in twenty-eight chapters. The Diet, however, decided that the new heresy should be put down. Wars and persecutions continued to rage; but the Reformation advanced.

Ferdinand I., during his short reign, in 1558—1569, had a severe struggle with the Pope, who required of him to introduce the inquisition throughout Germany, and to abolish all printing-presses, except those he should please to approve. Ferdinand reminded his Holiness that there had been Emperors before there were Popes; that if the church needed to be represented, it should be by such a head as Christ himself, when on earth, presented; namely, without pomp or worldly power. Since that period no German Emperor has been crowned at Rome. It was at this period, 1563, that the Pope, in order to re-establish his influence in Germany, disseminated the order of the Jesuits, founded by Ignatius Loyola, in 1540. Under Rudolph II., who reigned from 1576 to 1612, were formed the union of the Protestants and the league of the Catholics, of which the consequences were the Thirty Years' War, which was secretly

fomented by the Jesuits, in whose hands Rudolph was a mere tool.

In 1619, Ferdinand II., a pupil of the Jesuits, was elected Emperor, in opposition to the Elector-Palatine, who accepted the crown of Bohemia, relying on the assistance of his father-in-law, James I. of England. The consequences were war and bloodshed, that devastated the country, and overflowed it with the blood of its best subjects, until "He who ruleth in the councils of princes, and maketh even the wrath of man to praise him," brought about the deliverance of Germany by the arms of Gustavus Adolphus, king of Sweden. The peace of Westphalia, concluded at Osnabrück with the Swedes, and at Munster with the French, in 1648, reconciled the nations of Europe, and gave Germany a new political form. The struggle between France and Austria was, however, very often renewed, with little advantage to either.

The death of Charles II. of Spain extinguished the Spanish line of Hapsburg. Charles had nominated Philip of Aragon, grandson of Louis XIV., heir to the whole monarchy. This kindled the war of succession in Spain. France and Spain united, and Austria was aided by Holland and England during the reigns of William and Anne; George I. assisted Austria against Spain, whose fleet was destroyed by Admiral Byng; and George II. gave the Austrian cause his support against France, which was concluded by the peace of Aix-la-Chapelle.

From 1763 to the war of the French Revolution, Germany enjoyed peace under Joseph II., which produced the most beneficial consequences to that country, in the development of the powers of the human mind, the cultivation of the arts and sciences, the improvement of agriculture, increase of population, and the amelioration of the administration of different countries. The whole political system of Europe was on the eve of a great change, when Joseph died, and was succeeded by his brother Leopold.

The new order of things commenced in France was viewed in a very different light in Germany. The German states in Lorraine and Alsace suffered greatly, and the French, taking every advantage, soon overflowed Germany, but were repulsed by an alliance formed between Germany, Austria, and Prussia in 1792. The German Empire decided to take part in the war against France. Prussia soon after withdrew from the coalition.

Bonaparte, after his return from Egypt, defeated the Austrians at Marengo, in January 1800, and reconquered Italy, while his general Moreau gained the battle of Hohenlinden, and advanced toward Vienna. The consequence of these decisive victories was a peace concluded with Austria in the name of the German empire, which placed France in possession of all the German countries on the left side of the Rhine, comprehending the Austrian Netherlands and Lombardy in Italy. This peace was afterwards interrupted, and Napoleon occupied Vienna, and gained the battle of

Austerlitz. This was followed by the peace of Presburg in December 1805, greatly to the advantage of France.

In 1806 the Rhenish Confederation was formed, under the protection of Bonaparte, who declared he no longer recognised the existence of the German Empire; whereupon Francis abdicated the title of Emperor of Germany, assuming that of Emperor of Austria, to which he annexed his German states. In 1812, not only the troops of all the princes in the Rhenish Confederation followed Napoleon in his Russian expedition, but even Austria joined his banners. The retreat of Napoleon, however, decided the fate of Germany. In the treaty of Paris it was settled that Germany should not again be elected into an empire; and at the Congress of Vienna the act of the German Confederacy was concluded, by which the sovereign princes and free towns of Germany agree to defend each other upon any attack, not to make war on each other, and govern by a federative Diet, in which Austria shall preside. This confederation still exists; and under it, during a long peace, many of the German states have made great advances in civilisation and literary knowledge.

PRUSSIA.

The Prussians were a Slavonic race. Their history is wrapped in such complete barbarism and gross idolatry as to rob it of all interest. In

the twelfth century, Balislaus, king of Poland attempted to subdue the Prussians, and convert them to Christianity, and called in the Teutonic knights to his assistance; but the arduous task of Christianising the country occupied fifty years of war and bloodshed to accomplish. From this period we find Poland and Prussia engaged in frequent wars, sometimes with each other, sometimes with other kingdoms; frequently dependent on and frequently opposed to each other, or united with Sweden, until Frederic William, who reigned from 1640 to 1688 with firmness and prudence obtained the entire sovereignty of Prussia, which had been held in fief by the House of Brandenburg. Frederic improved the administration of his country, encouraged agriculture, commerce and industry, and by wise measures greatly increased the population of his dominions. He was succeeded by his son Frederic III., whose character was totally unlike that of his illustrious father. The father had shaken off the yoke of Austria; the son again submitted to it. The father was economical: the son a spendthrift, vain and fond of show. In 1701 he placed the royal crown on his own head at Königsberg, declaring Prussia a kingdom. Under his reign the Prussian territory was unimportant; but he encouraged the arts and sciences, founded the university of Halle and the academy of sciences, and another for sculpture and pictures, at Berlin. He was succeeded in 1713 by his son Frederic William I.,—a good economist, and upon the whole a shrewd

man, but a mere soldier, without any pretension to taste or refinement. He laid the foundation of the military power of Prussia, and left a large treasury and flourishing population. His private character, as depicted by his daughter the Margravine of Anspach-Bayreuth, is most disgusting. He was succeeded by his son, Frederic II., or Frederic the Great, in 1740, who (by a combination of high talents and restless activity of mind, seconded by good fortune, a well disciplined army, a wise government, and good laws,) raised the Prussian state to a degree of power and influence she had never before possessed. Bold and fortunate as a conqueror, he deserves yet greater praise as a ruler. He considered himself but as the first servant of the state, and presided over its affairs with the care of a father, proving that under a high-minded ruler the most extensive liberty of the press is not incompatible with the purposes of government, even under an absolute monarchy.

While young, and under the tyranny of his father, Frederic, encouraged by his mother Sophia Dorothea, sister of George II. of England, cultivated his natural taste for the sciences and belles lettres. Thus he knew how to support the rising fortunes of his kingdom by keeping up that gallant and warlike spirit which his own talents had at first inspired; at the same time that he gave every encouragement to the arts of peace and civilization. Although the merits of the ambitious Frederic were very great, the partition of Poland

must ever remain a blot or stain upon his glory. That unfortunate country had, for upwards of a century, been torn to pieces by wars with Russia and internal wars full of scenes of misery, and deeds of rapine secretly fomented by Catherine of Russia. Frederic, ever on the watch to improve his own position, accelerated the ruin of Poland by intrigues with the courts of Vienna and Petersburg; and it is generally believed that the odium of the partition rests with Frederic. In the distressed and distracted state of Poland this humane triumvirate (Russia, Prussia, and Austria) determined that the only decisive remedy was, their asserting their respective claims to certain districts lying within the Polish boundaries. All Europe were variously occupied by national concerns at that period; so that Frederic, taking advantage of opportunity, succeeded in this flagrant violation of national justice and honour, and obtained the partition of Polish Prussia and Great Poland. From that time Prussia has been divided into Eastern and Western Prussia. Frederic died at Sans Souci in 1786, in the 47th year of his reign and the 75th year of his age, leaving a greatly enlarged territory, a full treasury, a fine army, and high political influence. Whether viewed as a philosopher, a soldier, or a king, he was an eminently great man. But Frederic was a professed infidel, a severe husband, and a violator of law, justice, and humanity, when they stood in the way of his insatiable ambition.

Frederic William II. succeeded his uncle in

1788, and reigned until 1797. He had not the talents or abilities of his predecessor; but inherited his ambition, and was the first to take the field against republican France, by which he lost a fine army, and gained but little credit. Poland was still an object of oppression and violence. The courts of Vienna, Petersburg, and Berlin resolved to divide the country among themselves. The Poles were required to sign a treaty confirming the partition, to which the Diet were refractory; but some of the most violent members having been sent back to their provinces, the others were locked into a room, and, surrounded by an armed force, were obliged to sign the required declaration in Sept. 1793. In this manner two-thirds of the Polish territories were alienated, and in 1795 Russia demanded the remaining third, and was supported by the king of Prussia. The unfortunate Poles made a vigorous and spirited resistance under Kosciusko, who opposed Suvarof with great bravery but unequal power. He was defeated and taken prisoner. After this the Poles could no longer resist their enemies. The kingdom was divided, and the existence of Poland terminated. The inglorious reign of Frederic was brought to a conclusion, in Nov. 1797, by death. He was succeeded by his son Frederic William III. The new king found himself surrounded by difficulties internal and external. Disputes with Russia, France, and England followed each other. After the battle of Jena, Bonaparte occupied Berlin, the king and his family retreating to Koningsberg, and Napo-

leon made himself master of the whole kingdom. At the peace of Tilsit, Frederic William recovered the half of it back from the conqueror, and set himself to work to improve the condition of his now reduced territories. In 1812 Prussia joined the Russians in a war against France; but at the peace of Paris it was settled that she should be placed as in 1805. After the escape of Napoleon from Elba, Prussia took part in the new war, but was defeated at Ligny, and shared in the glory of Waterloo. At the second peace of Paris, Prussia obtained a further increase of territory near the Suer and Moselle, and formed the Quadruple alliance. A constitution, founded upon the principle of a national representation, has been promised by the king; but has not been, nor is there any appearance of its being, granted.

SWITZERLAND.

In the early periods of history this country was called Helvetia, or land of the Helvetians,—a name of German origin. It received the name of Switzerland from one of its own cantons, eminent for an early struggle to obtain independence. Under Julius Cæsar, Helvetia was invaded by the Romans and remained a Roman province until the empire was dissolved. Christianity is supposed to have been embraced in this country in the year 400. In 430 the Burgundians took possession of the southern and western districts, while the A

manni conquered the northern and eastern parts. Thus Switzerland was contended for by different German states, by the Burgundians and by France, all of which obtained districts which occasionally changed masters as the various parties succeeded, until 1264, when Count Rudolph, of Habsburg, compelled the whole country to acknowledge him Chief. His son and successor, Albrecht, governed them with great tyranny, and having, in the Governor Gessler, found one whose tyrannous folly exceeded even his own, a league was entered into by a few spirited men to rescue their country from his cruel oppression; but their designs were prematurely discovered by the well-known incident of the refusal of William Tell to comply with an absurd order of the frantic Gessler, which led to the most gallant struggles, for that independence they at last obtained, ever recorded by history.

In 1518, Zuinglius, having attacked various doctrines of the Catholic church, preached openly against the sale of indulgences, as Luther had done the preceding year in Germany. Religious zeal descended into fanaticism, and for some years distracted various cantons with division and civil war. When Calvin, though differing greatly from Luther, placed himself at the head of the Reformation in Switzerland, he established his own peculiar tenets, purified the natives of their dissensions, and in time peace was restored, which lasted uninterrupted by external causes for more than three hundred years, during which they overlooked the

changes which time and circumstance had brought about, in other countries, and, occupied with their own paltry jealousies, heeded not the awful warning of the French revolution, and neglected to take advantage of the first seven years to compromise matters with the new principles.

Unfortunately the extraordinary supineness and selfishness of her rulers have stripped Switzerland of the enviable distinction she might have borne among the nations of Europe, and placed her in the very lowest grade of the political scale.

The inhabitants of the Pays du Vaud, in 1796, cast themselves on French protection; and in the beginning of 1798 a French army of 40,000 men, under Generals Brune and Schauenberg, entered Switzerland, defeated the Bernese, united Geneva to the French republic, and established a new constitution, under the name of *the Helvetic Republic*. The French took military possession of Switzerland; but various changes took place, until the allied powers entered it in December 1813. The Congress of Vienna, in 1815, recognised the perpetual neutrality of the Swiss cantons, and the inviolability of their territory. But, placed between the rival powers of France and Austria, Switzerland will ever be in danger of becoming the seat of war. The influence of Austria is everywhere felt and acknowledged; but were the cantons of Switzerland united among themselves, they might yet vindicate the ancient glories of their land, and reclaim that heritage for which their ancestors so nobly fought, instead of wasting their blood and

strength in petty quarrels and intestine broils, destroying the advantages gained from neighbouring powers, and forfeiting liberty to the worst kind of despotism—that of Radicalism, which is, unfortunately, their present position.

FRANCE.

The earliest accounts of France are to be found in the history of Rome. When Gaul first became an object of Roman ambition, it was peopled by tribes called Celts or Gauls,—fierce, brave, and war-like hordes,—who were at length conquered by Julius Cæsar, and continued to be a Roman province, until the dissolution of the Western Empire produced the division of territory by which Europe is still distinguished.

The first race of monarchs were the Merovingian. But it would be tedious to follow their history, which consists of little else than a continued series of usurpations and murders. By degrees the superior influence of the Maires du Palais rendered them merely nominal sovereigns. In 687 this dignity became hereditary in the person of Charles Martel.

Pepin Heristel, who exercised his power with vigour and prudence, defeated the Saracens, and conquered the Frisons. At his death, his son, Pepin the Short, succeeded, and in 754 was proclaimed king at Soissons. This prince, who seems to have united in himself the virtues and vices of

a conqueror, died in 768 ; the epitaph inscribed on his tomb was "*Pepin, père de Charlemagne.*"

The reign of Charlemagne and his successor unto the treaty of Verdun in 843, forms part of the history of Germany. From this epoch the history of France as a separate kingdom begins.

Charles the Bald took the reigns of government. He was an energetic powerful prince, but found determined enemies in the Normans, to subdue whom cost him immense trouble, blood, and treasure. His more northern neighbours also annoyed and disturbed him sadly. He died in 877 and was succeeded by his son Louis le Bègue, "the stammerer." He was deficient in prudence and vigour. After a short and feeble reign he died in 879. Louis III. and Carloman divided the kingdom. A scene of faction and confusion followed which ended by placing the Emperor of Germany Charles le Gros, on the throne of France ; but he was utterly incapable of defending the kingdom conferred on him. The Carlovingian race of monarchs were now become a degenerate remainder of those master spirits, who, from being mayors, have stepped into the thrones of the masters, and was at length extinguished by Hugh Capet, the founder of the Capetian or third dynasty of France. Hugh Capet displayed the talents necessary to the government of a rude warlike people. The same firm, undaunted spirit, which gave him ascendancy, rendered him formidable to his enemies. He died in 996, and was succeeded by his son Robert, who inherited his father's virtue

but not his firmness. Pope Gregory lorded it over his conscience to the injury of his territory. He died in 1031 ; when Henry, his eldest son, ascended the throne, though opposed by his mother Constance ; but, aided by Robert Duke of Normandy, Henry succeeded in establishing himself. The disputes of this reign laid the foundation of that rancour which afterwards subsisted between the monarchs of France and England. Henry died in 1060, and was succeeded by his son Philip I., who resembled his father only in the animosity which he bore to William of Normandy. In every part of his conduct Philip evinced a treacherous and mean disposition ; a general laxity of government took place, and might have been productive of dreadful consequences, had not Louis VI. (le Gros), who succeeded him in 1108, been a prince remarkable for his many virtues. Louis supported Robert of Normandy, when his brother, the English monarch, deprived him of the Duchy of Normandy, and thus drew on himself the anger and power of Henry, who constantly defeated him with great loss. Louis died in 1137, and was succeeded by his son Louis VII. (le Jeune), a weak, superstitious, cruel prince, who, among other follies, undertook an ostentatious, vain pilgrimage to Jerusalem, accompanied by his wife Eleanor, heiress of Guienne and Poitou, whose frivolities so offended her husband, that on his return he divorced her.

Henry Duke of Normandy, more intent on in-

creasing his territory than his domestic felicity married Eleanor, by which he became much more powerful than his sovereign, and thus was France precipitated into a disastrous scene of conflict which lasted upwards of 300 years. Louis died in 1180. Philip II., his son, governed with such good fortune, that he has been surnamed Augustin. The situation of England, during the distracted reign of John, gave him advantages which he managed with the utmost policy, depriving her of Normandy and many other provinces. His reign was marked by the first creation of Mareschals of France. He died after a reign of forty-four years leaving his crown to Louis VII., whose reign was rendered infamous by the massacre of Béziers in which 60,000 Albigenses perished. Louis IX was so deeply tinctured by the religious superstitions of the times, as to obtain the name of "Saint." He joined a crusade against the Saracens in which he was taken prisoner, and obtained his ransom by the surrender of Damietta. He founded the Sorbonne, and headed a new crusade to Tunis in which he died of the plague in 1270, and was succeeded by his son Philip the Hardy, who, with his son Philip the Fair and his three sons, occupied the throne with little honour and less advantage to the country, until 1328, when by the death of Charles the dynasty of the Capetians expired.

At the death of Charles a regency was found necessary during the precarious situation of the queen. Philip of Valois and Edward III. of England, grandson of Philip the Fair, by the

mother's side, affirmed their right not only to the regency but to the crown. The claim was decided in favour of Philip, who, after the widow queen had given birth to a daughter, was declared king upon the Salic law. Edward could not brook his disappointment. Various jealousies and offences arose between the rival monarchs. Edward was for some time occupied in his favourite scheme of subduing Scotland; but at last resolved to avenge the affront offered by Philip, and for this purpose marched directly into France with 50,000 men. For eighteen years the two countries were distracted and impoverished by expensive wars, under different pretences; though the true cause was the animosity borne by the two monarchs. In 1346 Edward again landed in France with 30,000 men. Philip collected an army, it is said, of 126,000 men. The impetuous bravery of Edward would not allow him to hesitate on account of inferiority of numbers; and the splendid victory of Cressy, with the reduction of Calais, proved that he had not overrated his own powers. By the mediation of the Pope a truce for three years was concluded, during which Philip died, and was succeeded by his son John le Bon, in 1350, who soon found himself engaged in a war with England, under the command of the every where victorious Black Prince, who in the battle of Poitiers took the French monarch prisoner. One success followed another; until a peace, highly honourable to the English, was concluded in 1360. The affairs of France, meantime, became almost desperate.

John, unable to pay his ransom, remained prisoner at large in England, where, in 1384, his existence terminated.

Under the reign of Charles V., after the death of the Black Prince and his father, France recovered, in a great degree, her position as respect England, and restored the integrity of her dominions ; but his career was short, and that of his son, Charles VI., was full of disorders, and disastrous in the extreme. Henry V. of England taking advantage of the disturbed state of France soon found a pretext for going to war, and, landing with 30,000 men, took Harfleur by storm, overran the greater part of France, and eventually made himself master of the whole kingdom ; when it was agreed that he should marry the Princess Catherine, and from thenceforth France should be annexed to the English crown. The death of Henry placed England under the regency of the Duke of Bedford, and was soon followed by that of Charles. The young Henry was recognised king of France ; but a few adherents retained their allegiance to their native prince, and gradually recovered possession of parts of the kingdom. In this contest France was greatly assisted by two Amazons, Joan d'Arc and Agnes Sorrel, who gained more victories than any two generals. After the victories of Formigny and Castillon Agnes Sorrel, the invaders were forced to abandon the country ; and in 1450 Calais and the isles of Jersey and Guernsey were all that remained to the English.

Louis XI. ascended the throne in 1461, and, after freeing himself from external enemies, turned his fury against his nobles, crushing them by cruelty and perfidy in every possible way, until he had rendered himself absolute, and thus laid the foundation of that despotic government which eventually led to the blood-stained revolution of France.

Charles VI. was but fourteen years of age at the time of his father's death. His reign is only remarkable for his having been the chosen husband of Anne, daughter of Louis, while she was regent of France, and a foolish expedition against Naples. He died of apoplexy in 1498, and with him expired the elder line of Valois; and Louis, Duke of Orleans, was called to the throne under the name of Louis XII. The prudence and wisdom of this prince, joined to his success in arms, procured for him the appellation of "The Titus of France." As a matter of policy, he married Mary, the sister of Henry VIII. of England. The successor of Louis was Francis, Duke of Angoulême, Bretagne, and Valois.

Francis I. flattered himself he should be able to ascend the imperial throne, but was disappointed by the influence of Charles V. of Spain, which created an animosity between these two princes that filled not only their own countries but all Europe with wars, and was terminated only by the death of Francis, at Rambouillet, in 1547. The private character of Francis was detestable, and his court a scene of intrigue and debauchery.

During his reign the reformed religion spread rapidly through France, though every attempt was made to suppress it by penal laws and cruel persecutions, which, under the reign of Henry II was continued with the utmost bigotry and cruelty. But Henry's severities, instead of exterminating the Protestants, had the general effect of religious persecution—increasing the number. These cruelties were the prelude to 150 years of civil war.

The feeble and brief reign of the son of Henry Francis II., husband of Mary Stuart of Scotland was only remarkable for the intolerance of the Duke of Guise who usurped the government. During the minority of Charles IX., the infamous Catherine of Médicis, the Queen Dowager acted as regent, and, aided by the Duke of Guise persecuted the Calvinists or Huguenots, as they were nicknamed by the Catholics, and committed the most horrible outrages on them, as well as cruel persecutions of all other Protestants, who were obliged to arm themselves in self-defence under the great and good Gaspard de Coligny Admiral of France, and the Prince of Condé. Nothing was too unjust, too barbarous, too insulting, and too cruel and revolting for Catherine and her party; notwithstanding which, Coligny and the Prince of Condé, compelled the court to accommodate matters with the persecuted Calvinists in three successive wars; but the climax of Catherine's diabolical revenge was the massacre of St Bartholomew in 1572, when, in conjunction with her son Charles IX., she inveigled the heads of

the Protestant party to Paris, under pretence of witnessing the marriage of Margaret of Valois and the young king of Navarre, afterwards Henry IV. The signal was to be the tolling of the great bell of the palace on the eve of St. Bartholomew. The direction of this plot was left to the Duke of Guise; and the prince of darkness himself could not have found a more willing or able coadjutor. The venerable Coligny was stabbed in his bed, and thrown from the window into the street; where Henry, Count of Angoulême, brother to the king, spurned him with his foot, exclaiming, "Courage, my friends, we have begun well, let us end as well!" For five days and nights did this wretched butchery continue in Paris, without respect to age, sex, or condition. During the greater part of the massacre, Charles stood at a window of the palace, calling out "Kill, kill!" and even fired himself on the unoffending Protestants. The streets of Paris were literally floating with blood, and blocked up with murdered Protestants; and not content with this, the same orders were sent to all the provinces of the kingdom, and it is computed that not less than 90,000 Protestants perished in the massacre; but though the Almighty in his wisdom had permitted this diabolical work of butchery, he overruled all for good. The effect of the massacre was the reverse of what the Catholics and court had expected. Calvinism, instead of being destroyed, became more formidable from despair, and a thirst for revenge was added to a desire for civil and religious

liberty. Powerful supporters arose, and truths of the gospel prevailed. Though Henry III., who succeeded his brother in 1574, remorseless cruel bigot, under the Prince of Condé and the King of Navarre they were enabled to obtain peace on terms very favourable to Protestant interest. Henry, fearing the power of the Duke of Guise, got him assassinated,—which brought upon him the wrath of the Catholic party, and procured his own assassination by a Dominican Friar, at St. Cloud, in 1589. The assassin was honoured as a Saint at Paris, and the Pope expressed his approbation of the deed. Catherine died the same year with her son. The fourth Capetian and second Valois branch came extinct.

Under the reign of the gallant Henry IV of Navarre, the Protestants obtained the edict of Nantes in their favour, which was declared perpetual and inviolable. In all his endeavours to promote the welfare of his people he was assisted by his wise and talented minister, Sully; but the frantic Ravallac assassinated this excellent, high-minded prince only too soon for the happiness of France. His expression, “I will rest till every one of my peasants is rich enough to have a fowl for his soup on Sundays,” has been gratefully preserved among the people. Louis XIII. unlike his father, was weak and feeble; and under the corrupt administration of his minister Cardinal Richelieu and Mazarin, the Protestants were again the subjects of persecution. Henry IV. died in 1643, and was succeeded by his son Louis XIV.

termed the Great. Louis made every effort to advance the commerce, wealth, and agriculture of the country, and was successful in several warlike undertakings ; but he revoked the edict of Nantes, and obliged the Protestants to seek refuge in other countries. In the opening years of the eighteenth century the Duke of Marlborough eclipsed the French military reputation ; and one misfortune rapidly succeeding another, Louis was reduced to great difficulties and humiliations previous to the peace of Utrecht. Louis died in 1715, after a reign rendered remarkable by able ministers, generals, and men of letters, such as could not fail to render his reign one of the brightest in history ; and had he listened less to those flatterers who taught him to say, "l'Etat, c'est moi," he would have left behind him a name which few monarchs of ancient or modern history might not envy. Louis XV. succeeded while yet a child of five years. A regency council was formed with the Duke of Orleans at its head, for the management of public affairs. In 1726 Louis took the reins of government into his own hands, and through a long reign of troubles and internal discontents as well as external wars, guided them more in accordance with the caprice of his favourite mistresses, than according to the dictates of sound policy. Louis was a slave to sensual gratifications, in pursuit of which he involved his country in debts and difficulties, and filled his Parliaments with discontents, which were only terminated by his death. He was succeeded by his grandson,

Louis XVI., who found a nation highly discontented, and ready to seize the first opportunity of showing their resistance to royal authority. The young king used every means in his power to secure the affections of his people; but he probably drew the string of restraint a little too tight, and thus failed to insure peace or confidence. The internal peace of France was disturbed in 1775 by one of those dearths so common in France, which, together with some regulations respecting the police of corn, excited the populace to revolt and insurrection. Louis seemed willing to do every thing for the happiness of his people, except part with that absolute authority which he conceived to be his by right of inheritance. This was perhaps the greatest fault in the character of Louis: this it was that led him to the unpopular measure of dismissing Necker from the management of the finances, and entrusting it to Joly de Fleury. Necker was a great favourite with the people, and his dismissal led to contests and outrages on every side. Louis was sincerely desirous of promoting the welfare of his people; but personal good qualities were totally insufficient to allay the fermentations which had broken out during his reign. The public supplies were obtained by loan, and every loan increased the weight of taxes: the public mind became irritated and discontented; and, finally, the nation was hurried into a revolution the most dreadfully important on record.

During the twenty years that preceded the

French Revolution, a mighty change in public opinion, and in the mode of thinking, had been brought about, partly by the writings of Voltaire, Rousseau, Diderot, &c., and partly by the new constitution of America, from whence many distinguished officers had returned with completely new political ideas. Among the *Tiers-état*, or Commons, were many high-minded men, who now beginning to feel their own importance determined on bringing down the nobility and clergy, and giving a new form to the constitution. The tree of liberty was planted in Paris, and on the 17th June, 1789, they met, for the first time, under the name of the National Assembly. In October the Bastille was destroyed, and the Assembly made a public declaration of the rights of man, closed the churches, or prostituted them to the worst of purposes; abolished the privileges of the clergy, the nobility, tithes, game, and feudalism.

FRANCE AS A REPUBLIC.

In September, 1792, France was declared a republic, and royalty abolished. The tree of liberty was planted in every large town through France and Belgium. From this period pen cannot indite, nor tongue describe, the accumulated horrors of that distracted country, under the sanguinary tyrants of the day, maddened by sudden power, infidelity, and unbridled passions. The blood of thousands rolled down the streets of

Paris; the scaffold daily presented a scene at which humanity shuddered; but these wretches had lost all human feeling. Even women partook largely in the sanguinary mania; and the diabolical frenzy of open infidelity gloated over its victims, and revelled in blood and slaughter. The excellent Louis, his unfortunate wife, and faultless sister, after having been made to suffer every misery vice and cruelty could heap on them, were brought to the scaffold, and their sufferings ended by the guillotine, amidst the wild yells and insults of an insensate rabble. Robespierre, St. Just, Barrière, Billaud, Varennes, Lebou, and Collet d'Herbois, are names that must for ever be hateful to the Christian or rational man, and ever be a stain on the page of history. Of the two children of Louis, the Dauphin was cruelly imprisoned, and, it is said, poisoned. The princess escaped, with many others of the nobility, to England, and afterwards married the Duke d'Angoulême, her cousin. In 1795, France was placed under a Directory, and by it gained some degree of stability in its external and internal affairs. The furor of republicanism had now exhausted itself. The maddened wretches who had ruled in it had very generally fallen sacrifices to their own unprincipled party; and rationality began to assume some sway, though religion was overturned. Nearly all Europe had taken arms against France, with varied success. In 1796, Bonaparte, then a young man of only twenty-six years of age, entered Italy with an army destitute of warlike

equipments, defeated the Austrians and Piedmontese, overran the country, and in 1797 made an advantageous peace with Austria. The Venetian territory was next overthrown, and with the Seven Islands ceded to France. Batavia and Switzerland were subdued; and in February, 1798, a republic, with a Consular constitution, was founded at Rome, and Pope Pius VI. taken prisoner to Paris, where he died in 1799. Egypt, Syria, Austria, Spain and Portugal, Russia and Turkey were attacked and invaded, and England frequently threatened by this extraordinary man, who, in 1799, changed the government to a Consular, making himself First Consul; under which character he made peace with Spain, Russia, and Turkey in 1801, and with England in 1802, which was, however, of but short duration. In 1804, Napoleon was placed as hereditary Emperor at the head of France, and in 1805 placed the crown of the Lombardian kings upon his own head, and in the course of the following year made his elder brother, Joseph, King of Naples and Sicily. The Principality of Lucca, with other territories, were given to his sister Eliza; Eugene Beauharnois, his stepson, he made Viceroy of Italy, and married him to the daughter of the King of Bavaria; his second brother he made hereditary and constitutional King of Holland; his general, Bernadotte, was proclaimed Prince of Ponte Corvo, and raised to the heirship of the crown of Sweden; to Murat, who had married his sister, he gave the Prussian part of Cleves and

the Dukedom of Berg, with the title of Duke of Cleves and Berg; Marshal Berthier, Neufchatel, and the title of Prince; to his minister, Talleyrand, the title of Prince of Benevento; and, with an utter disregard of justice, overthrew the constitution of the German empire, which had lasted a thousand years, to make way for the Rhenish Confederation, of which Napoleon was named Protector.

The successes of this great man (whom we now remember as a sort of blazing meteor passing over Europe, uprooting, overturning, and destroying for a few brief years, and then suddenly disappearing) were as brilliant as they were unparalleled. In 1809, with all Europe acknowledging his power, Great Britain alone excepted, he repudiated the Empress Josephine, and married the young Archduchess Maria Louisa of Austria,—hoping by this marriage to secure his posterity to the empire of France; but vain are the plans of man, and foundationless the buildings of pride. Not content with the immense conquests he had obtained, and the height to which he had risen, Bonaparte made war against Russia; and, depending largely on his own presence, headed an immense army, and marched into that country. Murat entered Moscow, and kept possession two days. On the third the Russians set fire to their beautiful city in many parts. The conflagration was terrible, and the city was reduced to ashes. The French, thus deprived of all means of subsistence, were obliged to retreat. The severe and early winter of 1812 destroyed the retreating and pursued army,—a very

small number of whom reached France to tell the disastrous story. In the following March, Paris surrendered to the allied armies. The fallen Emperor abdicated the throne, and was banished to the island of Elba, and the Bourbons again restored to the throne in the person of Louis XVIII. He was not, however, very pleasing to the people; and Napoleon, having escaped from Elba, and landed at Cannes with 600 men, in twenty days replaced himself on the throne of France, from which he was for ever hurled a few weeks after by the results of the battle of Waterloo, and carried a prisoner to St. Helena, where he laid down his eventful life in 1821.

Louis XVIII. died in Sept., 1824, and was succeeded by his brother Charles, who commenced his reign by some popular acts; but the overruling spirit, hereditary in the Bourbons, broke out in Charles; and scarcely had five years passed, ere the nation was, by three detestable ordinances drawn up by Prince Polignac and his associates, impelled to take up arms. A complete revolution, of three days only, drove the infatuated Charles from the throne—gave liberty to France, and in July, 1830, placed Louis Philippe, Duke of Orleans, on the throne, with the title of “King of the French.” Since that period France has enjoyed external peace. Her religion is restored with more toleration than formerly, and the wounds made by a long struggle healed under Louis Philippe. Her finances, commerce, and population have greatly increased, and the intercourse with other Euro-

pean countries greater than at any former period; but France is constantly agitated by strong under-currents and opposing interests, which threaten her peace. Taught by hard lessons of adversity, and possessing a strong and calm mind, Louis Philippe is perhaps better calculated than any other man in the world to rule a mercurial changeable people without their feeling the iron rod of power. His life has been frequently attempted; but he has attained an honourable old age in the midst of a large fine family; all of whom he has settled advantageously, and by so doing has connected himself with every crowned head in Europe. The marriage of the Duke de Montpensier with the Infanta of Spain was a violation of treaties, and will probably prove as impolitic as it has been offensive. In this instance the calculating king and father triumphed over the clear-headed honourable prince and politician.*

* Since writing the above (in the early part of the present year) a sudden and total revolution has taken place in France, by which Louis Philippe has been hurled from the throne, and his sons from their governments; nearly all the expelled Royal Family have sought shelter in England, where, as heretofore, they find protection and Christian sympathy. France has again declared herself a republic, under a National Convention; but in her present excited and fearful state, who shall venture to say what a day will bring forth, or how her influence and example will operate on other countries and kingdoms in Europe, many of which are now in commotion?

SPAIN.

The earliest inhabitants of Spain appear to have been Celtic tribes, who probably entered the Peninsula from the neighbouring country of Gaul, and occupied the northern districts, while the south was peopled by the Mauritani from the opposite coasts of Africa. After a long contest Spain was consolidated into a Roman province under the first imperial Cæsar, and the Romans maintained dominion over Spain for 400 years. In 419 the empire of the Visigoths was founded in Spain by Valia, which continued for several centuries. In the early part of the 8th century, the Moors, or Saracens, having conquered North Africa, led a large army into Spain, contending every inch of ground with the Goths, who valiantly opposed them. For several centuries the kingdom was divided between the Goths, who were Christians, and the Moors, who were Mahommedans, each party founding separate kingdoms. In the 10th century independent Moorish princes were reigning at Saragossa, Toledo, Valencia, Seville, Granada, and Cordova; while Castile, Arragon, Galicia, Portugal, and many others, were governed by Spaniards. Of these, the kings of Castile seem to have been the most successful against the Moors. In the 12th century the transactions of the Chris-

tian kingdoms of Spain began to take a wider range than heretofore, by the marriage of Philip the Fair of France with Johanna Queen of Navarre. This led to important results, sometimes uniting in, and sometimes dissevering France, and even England, from the interests of Christian Spain; until 1469, when, by the marriage of Ferdinand of Arragon with Isabella of Castile, the kingdoms of Castile and Leon were united to those of Arragon and Sicily.

The reign of Ferdinand and Isabella was distinguished by high feats of war, by the prudence the firmness, and the justice of the measures taken for the civil concerns of their subjects, for the institution of the Hermandad, or "Holy Brotherhood,"—an association of cities for the purpose of protecting travellers and property; in all of which they were ably supported by their minister, Cardinal Ximenes. Ferdinand completed what former kings for many centuries had failed to effect—the total subjugation of the Moors in Spain. But the event which exercised most influence over the world was the discovery of America by Christopher Columbus, in 1492,—an achievement which this daring navigator could not have accomplished without the support of Isabella, who supplied him with three small ships. Yet, amid a host of virtuous actions, the characters of both Ferdinand and Isabella were stained by deep superstition. At an early age Isabella had vowed a vow to avenge the injuries done against the Catholic faith, should she ever come to the crown; and most truly did her hus-

band and herself fulfil that vow to the utmost of their power. Isabella had ever been taught that priests, whose exemplary lives and learning were approved by the Church, were so many oracles to whom she was commanded by God to give ear. Thus it was that a queen, in all other respects the most gentle and amiable, was led by the deep bigotry of her education, and the councils of her equally bigoted minister Ximenes, to establish a tribunal so sanguinary, unjust, and horrible as the Inquisition,—an invention at which the soul of man revolts—whose every footstep is marked by blood, and whose pestilence it will take long centuries to overcome. This act has fixed an indelible stain on Ferdinand, Isabella, and Ximenes.

Charles I. of Spain succeeded his father in the Netherlands, his paternal grandfather in Austria, and his maternal grandfather in Spain, in 1516. As a Spanish monarch, this accomplished despot, the cotemporary of Erasmus, Luther, and Frederic of Saxony, deserves unqualified indignation and reproach. It was during his turbulent, extravagant reign that Mexico and Peru were conquered by the first Cortes. In 1556 Charles abdicated the throne, on which he ruled with reckless tyranny, in favour of his son Philip, and retired to a monastery, where he died of melancholy.

Philip II., husband of Mary Queen of England, ~~was~~ a sanguinary, narrow-minded despot, who, ~~during~~ a reign of forty-two years, exhausted the ~~revenues~~ of that vast monarchy, and shed oceans ~~of~~ blood in a vain struggle to retain the Nether-

lands. Liberty prevailed, and floated its victorious banners over a country laid prostrate by fanaticism and bigotry. His "Invincible Armada," by which he thought to overcome Britain, was shattered by the only invincible and Almighty power, and its remnant destroyed by the gallantry of the English.

Philip III. succeeded his father in 1598. He was more imbecile, and, if possible, more bigoted and superstitious than his predecessor. Under him Spain lost her best and most industrious inhabitants, by the expulsion of the Moors and Jews. Under Philip IV., Portugal, though cruelly oppressed, shook off its bonds, and stood free from Spain. From this to 1761 the history of Spain is little more than a series of wars, external and internal, in which Austria, France, the Netherlands, and England, were at various periods engaged, with little glory to either, and certainly with loss of territory, commerce, and population to Spain.

In 1761 Charles III. signed what was called a family treaty between the houses of Bourbon, and took part in the war of France against England. During the American war she again joined France against England until 1783. Charles IV. succeeded his father in 1788. Urged by the family treaty and his own feelings, after the execution of Louis XVI. he ordered the French ambassador to leave Madrid; whereupon the Republic declared war upon Spain, and Spain formed an alliance with England. The Spanish war was conducted by Godoi, Duke of Alcudia, afterwards called the Prince of Peace, with varied success. At the

peace of Amiens, Parma and Louisiana were given to France. In 1803, when war was renewed between France and England, Spain endeavoured to preserve a neutrality ; but this could not long continue ; and the famous victory of Trafalgar, gained in October, 1805, by Lord Nelson, was against the combined fleets of Spain and France, by which they sustained a heavy loss. Soon after the peace of Tilsit, a conspiracy, attributed to Godoi, Prince of Peace, (who was known to be a mere creature of Napoleon, and in treaty with him for the partition of Portugal,) caused great commotion. The palace of Godoi was attacked by a furious mob ; while the French troops were rapidly advancing upon the capital, and Charles IV. was compelled to abdicate the throne in favour of his "dearly beloved son," Ferdinando Carlos. Napoleon refused to recognise the new king, but invited him to an interview, and having got him into his power, obliged him to make shameful concessions ; after which the whole royal family were ordered into the interior of France, and Murat was confirmed lieutenant-general of the kingdom by Napoleon, who named his brother Joseph king of Spain and the Indies, and guaranteed him the independence of his states in the four quarters of the globe. This aroused the whole Peninsula to arms ; and the defence of Saragossa soon taught the French what they might expect from a nation in arms for its dearest rights. They protested they would not lay down their arms till Ferdinand and his family were re-

stored. In this they craved the assistance of Britain; and nobly did the heart of England respond to the call. The war now became virtually a contest between France and England, under the separate command of Sir John Moore, Sir Robert Wilson, and Sir Arthur Wellesley (Duke of Wellington), who took the command in 1809; and after five campaigns, distinguished by brilliant operations and persevering patriotism, the French were, after the battle of Vittoria, entirely driven from Spain. Bonaparte, finding the Peninsula torn from his grasp, made a virtue of necessity, and released Ferdinand; but this cruel, wretched bigot was wholly unworthy of the crown. He abolished the constitution of the Cortes, and restored the Inquisition in all its horrors; and by his tyranny excited a rebellion, which broke out in Leon, Cadiz, Granada, and Seville. The king opposed them vigorously; but the rebels were two powerful, and he was obliged to put down the Inquisition, abolish the Jesuits, give freedom to the press, and restore the constitution of the Cortes. Thus was a flame lighted up in Spain that continues to blaze to the present day. Riego, the most famous Guerilla leader on record, continued to annoy and distress the court party, while the French again entered and laid waste the wretched country. Riego was taken prisoner, and executed, under circumstances of great cruelty, in 1823. Many of the liberals sought refuge in Great Britain. Anarchy and confusion continued to reign. Ferdinand exerted his power with an iron hand;

aided by the French troops. Meanwhile the national debt had increased frightfully, commerce dwindled away, the arts and sciences were neglected; and, though the French troops were soon withdrawn, anarchy, misrule, and wretchedness pervaded the country from coast to coast. By the old law of Spain, the Salic law, no female could sit on the throne; but Ferdinand, who used his power with an iron hand, set aside this law in favour of his daughter, Maria Isabella, who, after his death, in 1833, was proclaimed Queen, under the regency of her mother, when a party more fanatical than Ferdinand arose in favour of Don Carlos, the king's brother, whom they wished to place on the throne. The kingdom was distracted by war between the uncle and niece; parties ran high, and much blood was shed. After a long and unnatural conflict, Don Carlos was acknowledged King, but did not maintain peace, or produce union in his kingdom, which has ever since been a scene of continual discord and rebellion. After the death of Carlos, Isabella was again declared Queen; but her subsequent conduct was so offensive, that she was obliged to abdicate in favour of her daughter, who, in 1847, married her cousin, Don Francisco d'Assis. At the same time, her sister, the Infanta, married a son of Louis Philippe of France, the Duke de Montpensier. Neither of these unions have as yet been productive of happiness, either foreign or domestic; and at the present moment the political horizon of Spain is dark, cloudy, and tempestuous.

PORTUGAL.

The history of this country is so bound up with those of Germany, France, and Spain, that nothing need be said that has not been said of its ever until they recovered their independence under John Duke of Braganza, in 1668, after a war of twenty years. Under John a treaty of commerce was entered into between Great Britain and Portugal. This family continued to fill the throne with various degrees of despotism, until 1757 when the Marquis de Pombal, a staunch and intrepid reformer of undoubted talents, took the reins of government in hand, removed the Jesuits from the place of confessors to the royal family and soon after banished them from the country and confiscated their wealth. Maria Francisca Isabella, daughter of Joseph, married her uncle Don Pedro, in 1760, and mounted the throne in 1777; when Pombal was turned out of office, and many of his useful institutions fell with him; and the country was again divided between a bigoted nobility and an ignorant clergy. In 1792 the queen fell into a state of melancholy, and her son the Prince of Brazil, was appointed regent. Portugal was in constant war with France or Spain or both, in which they were often assisted by Great Britain. During the wonderful career

Bonaparte, Portugal, in common with other continental countries, suffered from French invasion and rapine. The regent and his family, aided by England, took refuge in Brazil, and the British troops lent their powerful arms to wrest the country from their cruel and rapacious invaders; and at the peace of Paris, in 1814, its independence was again restored by that friendly power to which the house of Braganza had more than once been indebted for its political existence. But Portugal proved, as heretofore, ungrateful, and even rose against the English at Oporto in 1820. This again introduced disorders that extended themselves to Brazil, where, to appease the people, through the Crown Prince, Don Pedro, the king promised them a different constitution. Directly after the king returned to Portugal, where he reigned badly amidst conspiracies and treasons until 1826, when he was succeeded by his second son, Don Miguel, although Pedro, as eldest son, was lawful heir, in whose behalf the Infanta, Maria da Gloria, took upon herself the command.

Don Pedro gave the Portuguese a constitution modelled on the British, vesting the crown of Portugal in his daughter the Princess Maria da Gloria and her posterity. Soon after this he abdicated the throne in her favour, and married her to her uncle Don Miguel. To this the queen-mother opposed herself violently, and, secretly supported by Spain, was proclaimed regent. Don Miguel, however, arrived in Portugal with his young wife,

and caused himself to be proclaimed absolute and independent king under the title of Miguel I. This usurpation was resented by Pedro, who, resigning his kingdom of Brazil in favour of his infant son, returned to Portugal, and after a sanguinary war succeeded in expelling his brother from the throne, and placing his daughter on that bed of thorns. Maria Gloria is still the acknowledged sovereign ; but Portugal is and long has been in a state of disaffection, tumult, and distraction.

ITALY.

The most ancient history of Italy is veiled in mythological darkness. Upper Italy, Gallia, Cisalpina, and Liguria, were peopled with various tribes of Gauls ; Middle Italy, by Etruscan and Latin tribes, the latter of whom extended into Lower Italy, or Græcia Magna, peopled by colonies of Greeks. Traditions of constant wars have been handed down from the mythological age ; to these belong the wars in Latium : the arrival of Eneas and his Trojans—the kind reception given him by the king of Latium, whose daughter Lavinia he married. Even the foundation of Rome, attributed to the twin-brothers Romulus and Remus, and the whole epoch of Roman kings, a period of 245 years, are veiled in clouds of mythology full of conflicting traditions and hopeless blanks. Rome from its very beginning, having been founded by colonists from Alba

Longa, belonged to the league of Latin towns. The constitution of Rome was founded upon the distinction between Patricians and Plebeians upon a very ancient form of religious worship — the warlike spirit of the citizens, and the severity of the patricial power. Kings were only respected as they were able to maintain war against their neighbours. All attacks upon royalty, and even its final abolition, was the work of the patricians and senate. It was a constitution like this which exalted Rome to her high and palmy state, and finally won for a colony, which originally possessed little more than a dozen square miles of territory, the dominion of all the then known world.

NAPLES AND SICILY.

Charlemagne united the Lombardian crown with the Frankish empire ; but the Normans who had entered the service of the Lombardian dukes of Benevento and Capua, succeeded in making themselves masters of all Lower Italy and Sicily. In 1130, Roger assumed the title of the Two Sicilies, and received the kingdom as a fief from the Pope Anælet II. After their extinction the house of Hohenstaufen exercised the supreme power until 1282. The Pope gave it to Charles of Anjou, brother to the King of France. After the general massacre, called the Sicilian Vespers, it came into the possession of
H 2

Peter of Arragon, and for two centuries remained a Spanish province, since which it has been subject to Austria or Spain as either power prevailed. In 1759, Don Carlos gave the Two Sicilies to his third brother, Ferdinand, who on the commencement of the French revolution was led into a war with France. During the unrivalled successes of Bonaparte, Ferdinand fled to Sicily, and placed himself under the protection of the English, when Napoleon named his brother Joseph king of Naples; but two years after, in 1808, called him from that to the throne of Spain, and placed Joachim Murat, his brother-in-law, on the throne of the Sicilies; and had Murat acted with prudence he might probably have continued to reign over the south of Italy; but his ambition to become sole king of Italy led him into a dispute with Austria and England, that soon expelled him from the throne, and finally brought him to the scaffold: both Naples and Sicily were restored to Ferdinand, who died in 1825, and was succeeded by his son, Francis I.

SAVOY.

Savoy was formed from the remnants of the ancient Burgundian dominions. The Counts of Savoy got possession of Turin, Asti, and Nice, and gradually enlarged their territories by marriage and inheritance. Amadeus was first created

Duke of Savoy in 1416, under the Emperor Sigismund.

Milan was raised to a duchy under the influence of the Visconti family in 1395.

FLORENCE.

The powerful house of Medici flourished in Florence from the beginning of the fourteenth century. In 1530 Charles V. bestowed upon them the title of Dukes which had been borne by the house of Este, in Modena. The Medici have contributed more than any other family to the welfare and prosperity of Florence, and will ever be remembered with pride and gratitude by the Florentines.

VENICE.

The most powerful of the Italian states was the bold republic of Venice; an independent commercial aristocracy, at the head of which stood an elected Doge. Venice maintained her independence for 1300 years; but after various changes, was, with its territories, joined to the Lombardo Venetian kingdom in 1814. A kind of mock constitution was given to the Lombardian Venetian states in 1815; but they have no legislative power whatever, and the government is *de*

facto absolutely arbitrary. The representation consists of landed proprietors, the nobility, and citizens, possessing a certain amount of income; but the emperor has a right to exclude whom ever he may think proper: he also imposes taxes. The kingdom is divided into two governments, Milan and Venice, under a viceroy. The administration of justice is arbitrary in the extreme and wretched beyond description, and the censorship cruelly rigid. Lombardy is without doubt one of the finest and most fertile spots on the face of the earth. The high enclosing mountains afford an abundance of water. The soil is extremely rich, and the irrigation perfect; towns and villages numerous, the population immense, and the skies cloudless; but industry has declined and still does decline; there is some tolerably animated commerce, but a bad government crushes the energies and destroys the hopeful spirit necessary to business and improvement.

PAPAL DOMINIONS, OR STATES OF THE CHURCH.

The States of the Church embrace the world's dominions of the Pope, or "Stato della Chiesa." It is a connected country of Central Italy. Rome the capital, according to ordinary accounts, was founded by Romulus, about 700 years B. C., and was governed by kings for 250 years. Ancus Martius, its fourth king, built a harbour and a

established a colony at Ostia on the river Tiber : he also founded the navy of Rome. Tarquinius Priscus, his successor, greatly extended the power of Rome. Servius Tullus divided the people into classes, and imposed taxes on them. His successor, Lucius Tarquinius Superbus, was driven from Rome in 509 B. C., and the kingly dignity abolished. A republic was now created, and Junius Brutus and Tarquinius Collatinus were appointed consuls. Long wars with the Etrurians and Latins, during which a dictator was occasionally placed at the head of affairs, exhausted the resources of the common people, and reduced them to absolute dependance on the patricians. In 499 B. C. the laws of the twelve tables gathered from Greece and Southern Italy were promulgated, and decemvirs appointed from the patricians. This caused a new rebellion, and the people, after many struggles, obtained a political equality with the patricians. A consul was then elected from each. In 389, Rome, with the exception of the capitol, was sacked by the Gauls under Brennus, who was afterwards defeated by Camillus. A long struggle with the Samnites, which lasted fifty years, terminated in favour of Rome, and left her the most powerful state in Italy. About this time the government assumed a democratic form, the legislative power being in the hands of the people. About 281 B. C. the Romans attacked the Tarentines, a people of Lower Italy, and for the first time were involved in war with a foreign power. The Tarentines invited

Pyrrhus, king of Epirus, to assist them, a man of courage, judgment and experience, who twice defeated the Romans, but was himself totally overthrown at Benevento in 275. The Romans having subdued Tarentum, directed their arms to Sicily, and this embroiled them with Carthage, producing a struggle which lasted twenty-five years. During this time Rome formed a navy by which she defeated the Carthaginians several times. A peace was made on two occasions, but soon broken. Hannibal, the Carthaginian general, crossed the Alps, descended upon the north of Italy, and won the battle of Cannæ; but after fifteen years of struggle was obliged to evacuate Italy, lost the battle of Zama in Africa, and thus reduced, Carthage was forced on a humiliating peace. By the conquest of Corinth, 146 B. C., the whole of Greece became a Roman province; and in the same year the powerful republic of Carthage was annihilated, the city itself reduced to ashes, and the whole state annexed to the Roman empire under the name of the province of Africa. From this time internal divisions and struggles distracted the republic. Sylla, Marius, and others, played conspicuous parts at home, while Pompey and Cæsar strove for the mastery in power and deceit. Cæsar, as proconsul, made the entire subjugation of Gaul and overran part of Britain, and while thus engaged something like peace was restored to Rome; but on his return, civil dissensions again distracted the state, and led to those events in which Pompey and Cæsar enacted scenes at which

the world stood amazed, until the fate of Pompey was decided at the battle of Pharsalia, forty-eight years B. C. Cæsar afterwards fell by the hands of conspirators in the Forum. During the long reign of Octavius, which was peaceable and prosperous, the spirit of republicanism gradually declined. He accepted the title of Augustus, and carried the grandeur of the Roman empire to its greatest extent. It was during his reign that our Saviour Jesus Christ was born into the world. Augustus died A. D. 14, and was succeeded by his stepson Tiberius. From this time to the year 69, no less than eight emperors, all eminent for cruelty, extravagance, voluptuous indulgence, and every vice that degrades human nature, reigned over the now luxurious and effeminate state and people. Vespasian and his son Titus were exceptions. Their reigns were marked with justice, mildness, and moderation, if we except the taking and entire destruction of Jerusalem. They were succeeded by four other emperors, more horrible, if possible, than the former. Trajan reigned from 98 to 117. He was one of the best and wisest princes that ever filled a throne; but probably the most happy period of Rome was the forty-two years in which Titus, Antoninus Pius, and Marcus Aurelius Antoninus reigned. From the close of this period we date the rapid decay of Rome. In 193 the imperial dignity was sold by the guards, and bought by Didius Julianus. From that time military despotism, cruelty, and misrule were carried to their utmost heights, while the Goths

made great inroads into the empire, as did the Vandals and other northern nations. In 233 Constantine succeeded to the empire, embraced Christianity, and transferred the seat of empire to the site of ancient Byzantium, building a new city called Constantinople. After the death of Theodosius it was divided between his two sons, Arcadius and Honorius, the former retaining the Eastern, and the latter receiving the Western empire.

In 455, during the reign of Maximus, Genseric plundered Rome for fourteen days; nine insignificant emperors followed, until 476, when Odoacer, the chief of the Heruli, made himself master of Rome. He was afterwards conquered by Theodoric king of the Ostrogoths, and the Roman empire was entirely dissolved. The Ostrogoths spread themselves over the whole of Italy, but their empire was disputed by the Greek Emperors. In the reign of Justinian, Narses drove out the Goths, made Central Italy a Greek province, and governed it for his imperial master till 567, when it was conquered by the Longobards, who held it until Pepin forced them to relinquish it to Stephen bishop of Rome, in 755. From this time it was governed by popes, good and bad, for several centuries.

In 1265, the Pope called the House of Anjou to the throne of Naples, to oppose the powerful house of Hohenstaufen; but the boundless ambition and vicious lives of the popes created continual disturbance and internal dissensions, as well as petty wars with all the neighbouring

states ; yet with all, their temporal and spiritual power continued to increase, until the middle of the sixteenth century, when, having reached its highest pitch, it began to decline gradually ; the descent was hastened by prodigalities and follies that produced new evils and civil dissensions. The victories of the French in Italy under Bonaparte forced the Pope to make many concessions. In 1797 a pretext was afforded for taking the city by French troops, when Berthier founded a republic with a consular constitution at Rome. Pius VI. was led a prisoner into France, where he died in 1799. Pius VII. by the assistance of the Austrians took possession of Rome, and assumed the papal power ; but in 1807 new disputes with France arose, several states were added to the French territories ; a revenue of 2,000,000 francs was assigned to the Pope, who was compelled to take up his residence in France, where he contrived to find amusements in such pursuits as a bigoted, besotted, weak-minded man was alone capable of enjoying : among them was embroidering a petticoat for the Virgin Mary ; and when, by English and Austrian money and valour, the French were driven out of Italy, this imbecile man was, after the events of 1814, enabled to resume possession of the states of the Church.* He did not, however, live long, and

* The only redeeming act of his life was an attempt at draining the Pontine Marshes, and putting them into a state of cultivation. In this attempt he spent a large sum of money ; but the air continues unwholesome, and nothing more has been done.

was succeeded by a miserable bigot, Leo XI., who re-established the Inquisition, stretched the authority of the Church to its utmost limits, and died in 1829, and was succeeded by Pius VIII., a man almost without character, not very cruel, but without any active virtues, content to be the head of the Church, perfect and infallible; he died in 1846, and was succeeded by a man of much more liberal mind, the commencement of whose pontificate holds out something like a hope for that beautiful but ill-governed country.

Rome, the ancient Roma, the capital of the states, and the residence of the Pope, though no longer mistress of the world, is still one of its finest and most remarkable cities, eighteen miles in circumference, and so long as it preserves the Pantheon, the church of St. Peter, the Colliseum, the Vatican, the Sistine chapel, its magnificent palaces, filled with the treasures of ancient and modern art, its Apollo, its population, and its statues, will remain the boast and wonder of Europe. Still Rome, like Babylon and Persepolis, presents one of the most striking lessons afforded by the pages of history of the instability of human grandeur, and the mutability of imperial power. To give a more extended sketch of her history is here impossible; it would indeed be nothing short of giving a sketch of the world for 3000 years. She has been, to use the emphatic language of the Scriptures, "the hammer of the whole earth," "a destroying mountain which destroyed all the earth."—She who had arrayed herself in the spoils of a con-

quered world, and gathered into her treasures the riches of the people, was ten times successively taken, burnt, and sacked, by the congregated hordes of the East and the North, and the star of the *eternal city* has set in darkness. Yet the Italians are still a very fine race of men, neither so grave as the Spaniards, nor so volatile as the French, possessing in themselves every element requisite to form one of the finest nations in the world: it is entirely owing to the disgraceful misgovernment by which this lovely country has been oppressed for so many generations, that they are so much behind others in political and moral rank. If we consider the state of civilisation in Italy, and the severity with which every means, religious and political, have been employed to put down all progressive improvement, the wonder will be that, under such an iron scourge of despotism, we do not find them sunk still deeper in the abyss of social degradation than they are. "Schiavi siam, sì," says Alfieri; "ma Schiavi agnor fermenti." We are slaves, but slaves who rage under the yoke.

THE IONIAN REPUBLIC.

The Ionian Republic consists of seven large islands, and a few smaller islands situated in the Ionian Sea. They were early celebrated in Grecian history, particularly in the Peloponnesian wars. The battle of Actium, which decided the destinies of the Roman empire, was fought between Santa

Maura and Corfu. In the thirteenth century the King of Naples got possession of Corfu: in the fourteenth the Venetians took these islands under their protection. Upon the dissolution of the republic of Venice in 1796, the Ionian islands fell into the hands of the French: in 1799 they were retaken by the combined fleets of Russia and Turkey, and Paul declared them an independent state, under the protection of the Ottoman Porte. In 1810 they were all, with the exception of Corfu, taken by a British squadron, and remained in the hands of the British until the peace of 1815, when they were declared a free, single, and independent state, and placed under the protection of his Britannic Majesty and his successors. They have a right to regulate their own internal economy, subject to the approbation of Great Britain, for which purpose a Lord High Commissioner resides on the island. Her Britannic Majesty has the right of occupying all the fortresses and fortified places of the seven islands, and of maintaining garrisons in them. The military force of the islands is also under her orders. The geographical position of these islands, combined with the possession of Malta, not only gives Great Britain the command of the Adriatic and a naval and commercial preponderance in the Mediterranean, but opens an easy communication with the states which comprised the once famed and glorious Greece.

TURKEY.

Two thousand years before the Christian era Greece was inhabited by fierce and savage tribes—"Children of the Soil." About 1800 years B. C. Inachus and Ogyges conducted a colony of Egyptians into this country, and founded Argos and Sycion, whence they spread over the Peloponnesus. About this time, Cadmus, a Phœnician, settled in Bœotia. These two chiefs founded Athens and Thebes. A century after, Pelops, a Phrygian chief, settled at Argos, and his far-spreading descendants gave it the name of the Peloponnesus. These numerous small states naturally rivalled and grew jealous of each other; hence came wars and fighting. The Trojan war probably took place 1200 years B. C. After the destruction of Troy, the dissensions of the dominant families and the quarrels of the Heraclides and Pelopidæ became fruitful sources of internal wars. Draco, and after him Solon, framed a code of laws for Athens, six centuries before Christ. The colonists, however, continued to extend their territories from the Black Sea along the shores of the Mediterranean, Thrace, Asia Minor, Italy and Sicily, Sardinia and Corsica, Marseilles in Gaul, Saguntum in Spain, and Cyrene, on the African coast. Four hundred and ninety years B. C., Darius, King of Persia, found a pretext for attacking Greece, but his fleet was wrecked against the pro-

montory of Athos, and Miltiades the Athenian defeated the army at Marathon. Nine years after, Xerxes, king of Persia, at the head of a countless multitude, crossed the Hellespont; but Greece was now saved by Themistocles, who annihilated the Persian army at Salamis. Leonidas at the pass of Thermopylæ, and Mardonius on the plains of Plataea, taught them what Greeks could dare and sacrifice in the cause of liberty; but the age was prodigal of great men, and Athens rose to the very summit of greatness and glory under the administration of Pericles, the successor of Aristides. Alcibiades commanded her armies; Phidias decorated her temples with the undying beauties of his chisel; Sophocles and Aristophanes furnished her theatrical entertainments; Thucydides recorded her glorious wars; Democritus, Empedocles, Socrates, and a crowd of other distinguished philosophers, trained and enriched the intellect of her youth, and taught them virtue.

Athens, already an object of envy to her rival, Sparta, drew upon herself the deadly resentment of that state by refusing to aid her in suppressing a revolt of the Messenian slaves, and thus involved herself in a twenty-seven years' war, that left her crippled and inglorious, under subjection to thirty tyrants nominated by her Spartan conqueror. The kingdom of Macedon originated in a Greek colony sent from Argos 813 years B. C. Its quarrels with Athens commenced under Perdiccas, 454 B. C. At this epoch Macedonia comprehended only Emathia, Mygdonia, and Pelagonia.

When Philip mounted the Macedonian throne he found his kingdom in a highly distracted and weakened state ; but his policy, and the discovery of gold mines in Thrace, quickly brought about a change in affairs. Philip aimed at the protectorship of Greece, and the Sacred War, as it was called, afforded him the means of attaining his object. He entered Thessaly as an ally, but left it only when declared a province of Macedonia. Sparta, Athens, Thracia, and Illyria, submitted to the power of this new state, which extended its frontiers to the Danube and the Adriatic. Philip obtained admission into the Amphictyonic Council, 346 B. C., where the orator Eschines laboured to obtain for him the title which the Amphictyons hesitated to bestow. The battle of Cheronea, in 338, decided the fate of Greece, and made Philip its master.

Notwithstanding the thunders of Demosthenes to arouse his countrymen, deaf to the eloquence of his oratory, they had not defended themselves against the designs of their conqueror. Philip was, however, cut off in the zenith of his glory by the dagger of the assassin, in 336 B. C., and was succeeded by his son Alexander, on whom a diet of the Grecian states conferred the title of generalissimo of their armies.

The battle of the Granicus opened up Asia Minor to the victorious arms of Alexander. The defeat of the Persian king Darius in person on the Issus inspired him with the design of overturning the Persian monarchy. The battle of

Arbela, 331 B. C., the result of which was chiefly attributable to the famous Macedonian phalanx, was followed by the taking of Babylon, Susa, and Persepolis, which placed the empire of that powerful country, so long the terror of Greece, in the hands of the Macedonian hero; who, having already conquered Syria, Tyre, India, and Egypt, and having been declared a god at the temple of Jupiter Ammon, now subdued several kingdoms beyond the Caspian Sea, and then conducted his troops across the Indus and entered India, directing his course from the Jaxartes to the limits of India, conquering the northern provinces. Porus, king of one of these provinces, gave the Macedonian some trouble by defending his country with astonishing intrepidity, such as commanded the respect of Alexander, who made the royal captive his counsellor and friend unto the day of his death. He next marched his troops toward the Ganges; but a mutiny breaking out amongst his army arrested his progress. Embarking the greater part of his army on the Indus, to return by the Indian coast into the Persian Gulph, he passed through the deserts of Gedrosia and Carminia, and arrived by this route at Babylon, 326 B. C., intending to make this city his seat of government. But the conqueror of the world knew not how to conquer his own passions, and fell a victim to secret poison or gross excess in a fit of intemperance, 323 B. C., before he had completed his 33d year; and with him this immense empire fell also. A few years after, and the Macedonian empire, with its meteor-

like founders, Philip and Alexander, had passed away, serving only

“ To point a moral or adorn a tale.”

The troubles which followed the death of Alexander weakened the power of Greece. The battle of Ipsus, 301 B. C., gave Egypt, Palestine, and Arabia to Ptolemy, Macedonia and Greece to Cassander, Thrace and Bithynia to Lysimachus, and the rest of Asia to the Indus or Syria, to Seleucus. The weakness of the Macedonian rulers led to the formation of two distinct confederations in Greece,—the Ætolian and Achaian leagues: the former was little better than a league of robbers and pirates; the latter embraced Corinth, Athens, Sicyon, and several smaller states. This league was planned by Aratus, and the talents of Philopemen supported its character, and gave efficiency to its measures, until it was overwhelmed by the power of Rome. The battle of Pydna, 168 B. C., put an end to the Macedonian dynasty; the taking of Corinth extinguished the last sparks of Grecian freedom; and, two years after, the whole country became a Roman province, under the name of Achaia.

The history of Greece from this time is merged in that of Rome. The inhabitants of this beautiful country soon found they had exchanged masters for tyrants, under whose yoke they groaned bitterly, but in vain. During the five centuries that elapsed from Greece becoming a Roman province till the reign of Constantine, its

annals present but little political interest. Greece was, however, during this period, the theatre of events more big with importance to the destinies of the human race, than all the great and glorious achievements of the age of Pericles, events on which depended the salvation of countless myriads of immortal souls. The Apostles of Christ preached the everlasting Gospel of their Master. Christian churches were founded in almost every city of Greece. Grecian missionaries carried the Gospel of a crucified Jesus to the uttermost parts of the known world, and thousands of the sons and daughters of Greece won the martyr's unfading crown, by attesting with their blood the doctrines of the Cross. The conversion of Constantine rescued the Christians from persecution; but his removing the seat of empire to Byzantium, and dividing it between his three sons, proved very disastrous, and exposed the country to the invasions of Asiatic hordes. Still, however unsettled the organisation and constitution of the eastern empire was, its dissolution was not effected until 1453, when Mahomed II. took Constantinople by assault, almost 1000 years after that of the western had been destroyed.

For the four following centuries the Greeks constantly struggled against, or under the iron rule of the Turks, a people whose name begins to appear in history about the middle of the sixth century, when this Scythian tribe settled at the foot of the Altai, in the steppes of Upper Asia, between Siberia and China. They were the fol-

followers of Mahomet, a pretended prophet, who was born at Mecca, in Arabia. He asserted that he was ordained to extend his religion by the sword, and he so far succeeded in his mission, that before his death he had conquered all Arabia, and diffused the spirit of his religion, which rapidly propagated itself throughout Asia and Africa. The immediate successors of Mahomet, the Kaliffs, conquered Syria and Palestine. In 762, Bagdad, the seat of a new monarchy, was founded; under their auspices the chiefs of this people gradually engrossed the power of every state into which they entered, and finally elevated themselves to the several thrones. In the ninth and tenth centuries the Turkish dynasties reigned in Palestine, Syria, and Egypt, from whence they passed over to Spain, and were afterwards known as Moors. In the 11th century they reigned in Persia and India, and founded a mighty empire in the east under the name of Saracens, with whom the Crusaders contended for the possession of Palestine.

In the 13th century the Mongols, a nation differing in language and manners from the Tartar stem to which the Turks belonged, founded several states; but the Turkomans drove them out, and divided Asia Minor among their warlike Emirs and their followers. One of these Emirs was Osman or Othman, who in 1299 took possession of the narrow passes of Olympus, conquered some of the provinces of Asia Minor, belonging to the Romans, assumed the title of Sultan, and on the ruins of the Arabs, Seldshucks, and Mongols,

founded the empire of the Ottoman Turks in Asia. Between 1300 and 1500 the gallantry and activity of ten great princes of this dynasty, aided by the heroic fanaticism with which Islamism inspires its devotees, raised the Ottoman state to the rank of the first military power in Europe. Solyman I. entered Europe in 1355, and made himself master of the Straits which divide Europe from Asia. His successor Amurath established the seat of empire at Adrianople, and profiting by the feebleness of the Greeks, expelled them from Thrace, and defeated the Bulgarians and Servians in a dreadful battle on the plains of Cossova.

Bajazet, a prince of fierce and enterprising character, directed the whole force of his power against Constantinople, but was interrupted by a dreadful invasion of Timour the Tartar, which forced him to hurry into the Asiatic provinces to check the frightful progress of his new enemy. The two emperors met, and after a furious and sanguinary contest from daybreak to nightfall, the Sultan was taken prisoner, and the greater part of his army destroyed; but Tamerlane was not succeeded by such as could maintain his conquests; the Turks soon recovered their loss, and had again leisure to attempt the destruction of the Greek empire. It was not till 1453 that this attempt was successful, when, after a violent assault of the Turks, a dreadful carnage of three days, during which the imperial city flowed with blood, the emperor and all his warriors were overwhelmed; and thus terminated the existence of the western

empire, in the year of the Hegira 857 and 1123 years after Constantine had removed the seat of empire to Byzantium, and given his name to that celebrated city, now the capital of the Turkish dominions; but the Turks knew not what it was to enjoy peace for any long period; they were often involved in wars with the growing powers of the Poles and Tartars, Russia and Austria, in which they sustained repeated and severe losses. In 1790 a conference was held at Reichenbach, when the ministers of Britain, Holland, Prussia, Austria, and Poland were present, and peace was established between the Austrians and the Turks; but it was found impossible to reconcile Russia, and war with varied success continued until 1812, when the exhausted state of the Turks, and the critical state of Russia, just then invaded by the French, forced them to an accommodation, and the peace of Bucharest gave an accession of frontier to the Russians, extending from the Dniester to the Pruth, comprising Bessarabia and part of Moldavia.

During the sitting of congress at Laybach, at the moment the Neapolitan states were invaded by an Austrian army, a revolt of the Greeks burst forth against their Turkish masters in Moldavia, Wallachia, the Morea, and the Greek islands. In the beginning of the struggle the Greeks suffered severe defeats from the Turks. Prince Ypsilanti was obliged to take refuge in Austria, where by an act of atrocious despotism, he was arrested and sent to the fortress of Munkatsch. By the as-

sistance of English loans to pay their troops, and English volunteers to fight their battles, the Greeks in 1821 took Tripolizza, the capital of the Morea, and two constitutions, the one published at Missolonghi, the other at Salona, were obtained for the eastern and western continents. On the 1st of January, 1822, the political existence and independence of Greece was proclaimed. Still wars with the Turks continued, and in 1825 Ibrahim, son of the Viceroy of Egypt, took possession of Navarin. With this fierce and warlike chief the Greeks maintained a desolating and bloody struggle for the peninsula; they knew but one battle cry, "freedom or death;" and this they shouted as with daily diminishing numbers they rushed on their enemies. Their devoted heroism at last roused all Christian Europe to their aid: the fleets of England, Russia, and France, swept the Grecian seas of the Turkish fleet, and relieved the Morea of their ruthless invaders. In 1829, the French and British announced their intention of maintaining the independence of the Greeks: when it was agreed that Greece should remain under the protection of the Porte; that the Porte should formally acknowledge the independence of the Greeks; that the government should be hereditary in the family of a prince chosen by the three powers in concert with the Porte, but he is not to be a member of the reigning families of Russia, France, or Britain. In consequence of this arrangement, Otho, crown prince of Bavaria, was placed on the throne as

king of Greece in January 1833; and under his administration the states have enjoyed the blessing of continued peace and freedom from the innovations of their tyrannical neighbours.

THE NETHERLANDS.

This country was formerly a part of Gallia Belgica, and was called Belgium. It obtained the name of Netherlands, Pays Bas or Low Countries, from its low situation, and the extreme flatness of its surface, especially in Flanders, where one may travel fifty miles without seeing even a hillock. The north part, or Holland, is so called from a German word *hopl*, English, *hollow*, and implying a concave or very low country. The first notice we have of the Netherlands is contained in Cæsar's Narrative of the progress of the Roman arms in Gaul. About a century before the Christian era the marshy country between the Rhine and the Maese obtained the name of Batavia (generous and brave). So highly were these people thought of by their conquerors, that for many years the body guard of the Roman emperors were chosen from the Batavians; but these people disappeared from history in the fifth century, the Belgæ or Belgians in the sixth: the monarchy of the Franks which rose on the ruins of Gaul during the sixth and seventh centuries, embraced all the provinces of the Netherlands, and planted the Christian faith there. By

the peace of Verdun in 843, all the country east of the Rhine, together with Batavia and Friesland, were united to Germany. But as the states advanced, they distinguished themselves by commercial activity, and industriously reclaiming new tracts of their land from the sea: thus they obtained power and self-confidence that enabled them to struggle against the military lords of the soil, which they did for upwards of two centuries. In the fifteenth century the whole country was in possession of the House of Burgundy, from which it passed to the Spanish branch of the House of Austria on the resignation of Maximilian in favour of his son Philip the Fair, who, dying in 1516, left these provinces to Charles V. The Netherlands had for some time enjoyed a sort of independence, though dependent on a foreign power, during which they had advanced in commerce and civilisation; but Charles soon made them feel and submit to his absolute authority. In 1556 Charles abdicated the sovereignty of the Netherlands in favour of his son Philip, a bigoted Catholic, who thought the persecution of heretics his most important duty; and soon made it evident that, notwithstanding the stringent nature of his oaths, he disregarded the interests, feelings, and prosperity of his subjects in that quarter of his dominions. His sister, the Duchess of Parma, was appointed regent of the kingdom under the direction of Granvella, a furious bigot, who introduced a large number of licentious exacting troops, so that the Duchess soon found the dis-

content of the people had arisen to an alarming height, under the Prince of Orange and Count Horn. The Duchess, finding they were too powerful to be slighted, complied with some part of their requests, and dismissed Granvella; but his successors were rather worse than better, and Philip was heard to declare, that he would rather be without subjects than be a ruler of heretics. It was by-and-by discovered that France and Spain were concerting measures for the total destruction of the Protestants; and the fury of persecution continuing to increase, the Duchess resigned her regency, appointing the Duke of Alva her successor, a man whose bigotry, pride and stubbornness, equalled those of his master. The severest punishments were inflicted on all who had supported the Prince of Orange: citadels were erected, and garrisons of foreign soldiers put into them, to force obedience from the people.

The Duke of Alva soon perceived that the rigour he had used in enforcing his measures, instead of intimidating the people, had united them, and given them strength to oppose his severe and arbitrary decrees. He therefore sought to conciliate and attach them by promises, and some few concessions; but, finding all his efforts tended but the more to estrange the people, he resigned his power, and returned to Spain to boast that in five years he had given 18,000 heretics into the hands of the executioner, and to receive his well-merited reward, the hatred and detestation of all mankind, and of none more than

of the master and king he had sought to serve, by sacrificing all honour and humanity, which, added to the pangs of conscience, and the reproaches of *that master* whose servant he had really been, rendered the remainder of his life a period of bitter misery.

So dreadful were the oppressions, and so violent the struggle for liberty for a long period, that the Netherlanders would willingly have put themselves under the protection of any of the Protestant powers in Europe. An offer of the sovereignty was made to Elizabeth of England, which she refused; but granted them loans and soldiers. She also gave her support to the union of Utrecht in 1579, which laid the foundation of the Commonwealth, known by the name of the United Provinces. Still it was not till 1648 that a treaty was concluded, by which the King of Spain renounced all claim to the sovereignty of the United Provinces. By prosecuting the arts of commerce and traffic with perseverance, the United Provinces opened a communication with all the known world, and soon began to be ranked among the leading nations of Europe; but a war with England, in which they involved themselves during the Protectorate of Cromwell, nearly ruined them. After the peace of 1654 they again flourished for a time; but a heavy national debt burthened them, and their commerce disappeared, while that of England increased. The elevation of William III., Prince of Orange, to the English throne, served rather to involve them in difficulties with

Great Britain than to relieve them; so that external wars and internal dissensions brought the once flourishing states to the very brink of ruin.

In 1795, a new Batavian republic was formed under the protection of the French; but in 1801 the constitution was again changed by her capricious rulers, and the Batavian republic saw her fleets ruined by the maritime power of the English; — her colonies destroyed, her commerce annihilated, and the Bank of Amsterdam utterly ruined. The peace of Amiens cheered their prospects a little, by restoring some part of the lost colonies; but the new war between France and England destroyed the last hopes of this unhappy country, which fell under the widely-extended power of Napoleon; who, in 1806, placed his brother Louis on the throne as hereditary king of Holland. The misery of the country was extreme, their debt greatly increased, and their only commerce smuggling with England. In 1810 Louis abdicated in favour of his son.

The victories of the allied armies, however, soon drove the French out of the country; and in December, 1813, the Stadtholder William was recalled from England, and made his triumphant entry into Amsterdam, where he was received with every demonstration of joy. After the battle of Leipsic, at the Congress of Vienna, the Spanish or Catholic Netherlands, which had been subject to France for seventeen years, were given up and united to Holland, under the name of the kingdom of the United Netherlands, of which the

sovereignty was given to the Prince of Orange, who took the title of William I., King of the Netherlands, which he continued to hold until 1831, when he abdicated in favour of his son, and the countries were again divided ; when, agreeably to the treaty of peace in 1814, Leopold of Saxe Coburgh was placed on the throne of Belgium, and John succeeded to that of Holland ; and so divided, the countries are more likely to prosper than united, since the two nations have essentially different characters, languages, religions, and politics. The Belgians are bigoted in the extreme ; the Dutch are not. The Belgians like all that is French, and hate the English ; the Dutch incline to the Germans, and have a strong English bias. The Belgians are rigid Roman Catholics ; the Dutch are Protestants, and among them is to be found almost every description of professing Christians. In one thing only are they alike ; — the active industry, that overcoming all difficulties, converts their low, marshy, sandy country into a cheerful garden, transforming fens and bogs into corn-fields and smiling meadows, and not permitting a weed to grow while it can be eradicated. The Flemish painters have only copied from nature when they represent their charming cottages embowered in groups of trees and thickets of surpassing beauty.

ENGLAND AND WALES.

The ancient name of Britain was Albion, the various etymologies of which are fanciful, and at best but conjectural. The first peopling of the island is buried in profound obscurity. Its earliest inhabitants are believed to have been Celtic. The southern Celts, the Gaels of history, are supposed to have passed from the Continent, and to have taken possession of the southern parts of Great Britain, 1000 years before the Christian era. To the Celts succeeded the Goths, who, under the name of Belgæ, passed over into England. When Cæsar first invaded Britain, he found it divided into tribes, of whose moral and intellectual character historians speak well; but, as regards the arts of life, they were in the very rudest state possible. Clothed in untanned skins, with half-naked bodies dyed blue, and marked in fantastical figures, they had adopted the Gallic fashion of allowing the beard on the upper lip to grow to an enormous length, and had from them learned something of agriculture. Their food was milk and the flesh of herds; their habitations very little superior to the kraels of the Hottentot. These were generally in the midst of a wood, and fortified by trunks and roots of trees, similar to the defences of the New Zealander. They appear to have had some knowledge of the use of arms; and a very formidable sort of war carriage, surrounded by short scythes that turned every

way. Their religion appears to have been a dark and tyrannical species of superstition, of which the Druids were the priests, as they were the judges of the people, dispensing rewards and punishments without the interference or sanction of any higher tribunal.

Such were the rude inhabitants of this isle, when, fifty-five years before Christ, Cæsar effected a landing with his infantry on the coast near Deal, from which, even by his own account, he gained but little glory, and scanty laurels. One would think that Britain presented very little that could interest a man who grasped at the sovereignty of the Roman empire. It was not, however, until the reign of Agricola that the bold warlike islanders were entirely subdued. During his seven years' residence in England he built a wall, stretching from the Clyde to the Forth. Adrian afterwards built another, between the Eden and the Tyne; and, at a later period, when Roman arms could no longer be spared to England, Severus built a wall parallel to that of Adrian, extending from the river Tyne on the east to Bowness on the Solway Frith on the west, eight feet in thickness and twelve feet in height, exclusive of the ramparts. This served to defend them against the attacks of the Northern Britons, when the Romans themselves, attacked on every side by hordes of demi-savages, were under the necessity of withdrawing their legions from England to assist them at home.

The Britons were now free; but the arts of

civilisation and luxury had unfitted them to enjoy liberty, or contend against their northern foes, the Picts and Scots. Vainly they entreated the Romans to return : it was no longer in their power ; for the Huns were to them more terrific than the Picts and Scots to the islanders. Disappointed of aid from the Romans, they applied for assistance to the Saxons, a people inhabiting the Chersonesus Cimbrica, or the peninsula bounded by the Baltic Ocean on the north and east, the Elbe on the south, and the German Ocean on the west. The Saxons, a bold warlike people, readily accepted the invitation, and sent over 1600 men under Hengist and Horsa, who soon enabled them to chase the enemy. The Saxons, glad to exchange the bleak shores of the Baltic for the fertile, smiling pastures of England, brought over immense numbers of adventurers, and succeeded in making themselves masters of the island ; but their manners and doings partake more of fable than of history. Certain it is that they became its masters, and continued so, with some interruptions by the Danes, until the tenth century.

The history of the Anglo-Saxons, while it continued divided into the independent kingdoms of the Heptarchy, is exceedingly obscure and confused. The whole consists of a succession of murders, plots, treasons, acts of violence and tyranny, and deeds of dark superstition. Every prince was at war with his neighbours, and every state in turn annexed to its more powerful rival ;

until Egbert, by the exertion of a master mind, succeeded, in 827, in uniting in his own person what had been the seven kingdoms, under the name of England. From this time to 1017 the Saxon kings struggled against the warlike hardy Danes with various success, but certainly enjoyed very little peace in a country they had conquered, it is said, by stratagem. The Danes were opposed and conquered by Harold, the son of a popular nobleman, who was again opposed by William of Normandy, who pretended that the crown had been left to him by Edward the Confessor; and, in a battle fought at Hastings in Sussex, with obstinacy and intrepidity commensurate to the stake for which they contended, Harold and his two brothers fell, and gave the victory to William, in October, 1066.

William, preferring to be considered a lawful king rather than a conqueror, was crowned by the Archbishop of York at Westminster Abbey; and, for a time, seemed to govern impartially; but, by degrees, he filled every post of value or honour with Normans, and confiscated the estates of complaining or rebellious English nobles, bestowing them also on his followers; thus forcing them to submission by acts of coercion and robbery, rather than winning their affections. The latter part of William's life was embittered by domestic broils; his sons quarrelled among each other, and the eldest, Robert, proved the most troublesome of his enemies. The feudal law was introduced in this reign.

William died in 1087, and was succeeded by his second son, William Rufus, or the Red. He was aided by the intrigues of Lanfranc, an ecclesiastic, in obtaining the crown, and maintained it with violence. He treated his subjects with uncommon severity. Robert, the true heir, desirous of signalising himself among the Crusaders, mortgaged his territories to William for 10,000 merks, a sum which he extorted from his subjects. William was accidentally killed in the New Forest, in 1100. A retributive Providence seems manifest here. The forest had been laid out by the conqueror, regardless of the rights of property or the sanctities of religion, and in it two of his sons met their deaths.

Rufus was succeeded by his youngest brother, Henry, to the prejudice of Robert, who made some struggles to recover his dominions, but was found unfit for government, and yielded to Henry, who granted him a pension of 3000 marks, but afterwards thought this too much, and seized an opportunity of making him relinquish it. Robert could not satisfy even his Norman subjects, and Henry, taking advantage of their discontents, invaded Normandy, made it his own, and kept his brother a prisoner in Cardiff Castle for the remainder of his unfortunate life. Henry had one daughter, married to Frederic of Austria, and one promising son, whom he had taken to Normandy, to be acknowledged by his Norman subjects. On his return the vessel was wrecked, and the prince, with all on board, drowned. Henry died in 1135,

leaving his daughter Matilda heiress to the crowns of England and Normandy.

Matilda ascended the throne, but her right was disputed by Stephen, who had married a daughter of William I. Stephen was not deficient in military skill or ardour, and many battles were fought between the two parties; but the death of the Earl of Gloucester deprived Matilda of her last hope, and she left England; but just then Henry Plantagenet, her son by a second marriage, took up the cause, and soon reduced Stephen to terms of accommodation, from which he was released by death in 1154, and Henry succeeded him.

Henry, on mounting the English throne, was the most powerful, and proved himself the most able sovereign in Europe. Beside his English and Norman dominions, he possessed in right of his father, Anjou, Lorraine, and Maine in France; and in right of his wife, Guienne, Poitou, Saintonge, Auvergne, Perigord, Angoumois, and Limosin. To these he soon annexed Brittany and the county of Nantz, thus becoming master of more than one-third of the French monarchy. At home his vigour and prudence restrained the clergy, and kept his turbulent barons at peace. Thomas à Becket, who had been raised to be primate of all England, an insolent, proud, and overbearing priest, gave him some trouble; the assassination of this audacious prelate, however, soon relieved him from the annoyance, but brought him into disgrace with the church. In

the mean time Henry undertook the conquest of Ireland. He had received a grant from Pope Adrian, and pursued it so vigorously that in a few months he subdued the whole island to his own power. He also took William, king of Scotland, prisoner at Alnwick, and compelled him, his nobles, and his bishops to do homage to him as Lord of Scotland; but successful as he appears, his private life was embittered by family divisions. He died at Saumur in July, 1189, and was succeeded by his son Richard.

Richard inherited all the bravery and warlike talent of his father, and all the romantic superstition of the age. Fired with the prevalent frenzy of crusading, which then pervaded Europe, the lion-hearted monarch, disregarding any evils which might fall on his own dominions, joined the Crusade, and proceeded to the Holy Land, where his achievements are better fitted to the pages of romance which they have filled, than to the sober page of history. Returning home, he was taken prisoner by Leopold of Austria, and after some time redeemed by the payment of a large sum by his subjects; but the restlessness of his disposition chased repose from his own bosom and from those of his people. He undertook an expedition to France, where he was shot with an arrow by one of the turbulent revengeful spirits with which he was surrounded, and died at Rouen in 1199.

John, the younger brother of Richard, who had long sought to obtain the crown by sinister methods, now ascended the throne by succession,

but soon convinced those who had advocated his claims how utterly unworthy he was of the dignity to which he had so eagerly aspired. His follies, his crimes, and his ill-concerted attacks upon his nobles, alienated from him the affections of his subjects. In this situation he undertook to wrest from the ecclesiastics many of their privileges, but he had neither prudence to form a good plan, nor resolution to carry through a bad one, and his nobles formed the determination of compelling him to accede to such terms as they deemed necessary for securing their own interests. John, after a feeble, irresolute, and childish resistance, was obliged to yield, and at Runnymede—yet held in reverence for the important event—signed “Magna Charta” or “Great Charter,” the foundation of British liberty. After this he raised a body of troops for the purpose of reducing his barons; but they called in the aid of the king of France, and before the affair could be settled, John died in the eighteenth year of his reign.

The Earl of Pembroke, who had been a firm adherent of John, got his son Henry, scarcely ten years of age, proclaimed king, and himself appointed regent, and his abilities preserved tranquillity; but when Henry took upon himself command, all tranquillity fled. The chief aim of Henry seemed to be to raise money, in order to waste it in a lavish expenditure on pleasures far from refined. The nobles had recourse to arms: a parliament was summoned for the purpose of redressing grievances, which presents the first

rough outline of our present House of Commons. The charter of privileges was confirmed, and a committee appointed, under the powerful Earl of Leicester, for carrying on the business of the nation in the intervals of parliament. At last, Prince Edward overthrew the authority of the earl, who was killed in battle, and restored his father to the freedom and power of which he had long been deprived, and then himself joined a crusade to the Holy Land. Henry died soon after in 1272, and the fifty-seventh year of his age.

Edward I., on his return, succeeded to the crown without opposition, and restored to the civil administration that authority and regularity which, during the weak reign of his father, had been nearly annihilated. Edward undertook and accomplished the conquest of Wales, giving to his son the title of "Prince of Wales," which title has ever since been held by the eldest son of the king. The Welsh were the only remains of the ancient Britons, and had preserved among their mountain fastnesses the laws and customs of their ancestors, free from foreign admixture. They made a gallant resistance, but were overpowered, and obliged to submit to receive the laws of England. Edward attempted also to reduce Scotland to his sway, but did not fully succeed. He died at Carlisle in 1367, urging his son with his last breath to prosecute the war against Scotland, and never to desist until he had annexed that kingdom to his English dominions.

The disposition and the capacity of Edward II.

were unlike those of his father. The war with Scotland was a series of failures, until the battle of Bannockburn ensured the independence of that kingdom. The weak mind of Edward was incapable of regulating or controlling the lawless conduct of his own barons. Frequent quarrels led to civil wars, and his wife Isabella, a bold, intriguing, inconstant woman, joined the discontents, and having, with her paramour Mortimer, fled to France, she returned and invaded England, the malcontents from all quarters flocking to her standard. Edward found himself obliged to submit; he was deposed, cast into prison, and at last murdered under circumstances of the most barbarous cruelty.

On the young prince's accession, he evinced a disposition the very reverse of his father. Edward commenced his reign with vigorous measures; seized Mortimer, and condemned him to death, and confined the queen in the castle of Rising, on a small pension. He next undertook the invasion of France, but returned unsuccessful. He, however, carried on at the same time very successful wars against France and Scotland. In the former country his son, usually called the Black Prince from the colour of his armour, gained the highest character for valour, prudence, and honour. The battles of Cressy and Poitiers ended in the most complete and glorious victories recorded in history; but the Prince did not live to reap the reward of his valour. He died 1376, and his father in 1377. It was in this reign that

the legislative proceedings were first given in English; hitherto they had been given in French, often to the detriment of the people, "because they were impleaded, shown, and judged in the French language."

Richard II., the son of the Black Prince, ascended the throne of his grandfather when only eleven years of age. The administration of the government had been in a great measure entrusted by Edward to his second son, the Duke of Lancaster, in his old age, and the Duke still continued to hold it. Richard was wild and immoderate in his expenses. To meet them a poll-tax was imposed that gave great offence, and led to the celebrated insurrection of the populace, headed by Wat Tyler. Richard, after a career of folly, extravagance, and imbecility, was deposed by his own parliament, and the Duke of Lancaster raised to the throne by the title of Henry IV. in 1399.

The manner in which Henry obtained the crown naturally rendered his reign very turbulent, and laid the foundation of the long and bloody contest between the Houses of York and Lancaster. Rebellions and insurrections were quelled by the vigour and promptitude of his measures. Still the kingdom was shaken to its very foundation. The most important rebellion during his reign was conducted by the Earl of Northumberland, who, by treaty with the Welsh and Scots, raised a formidable body of forces, which ill health obliged him to entrust

to the command of his son, Harry Hotspur, who was slain in the conflict, and his troops routed so completely as to leave the rebels at the king's mercy. It was in this reign that the doctrines of Wickliffe, which led to the Reformation, were preached, and considerably accelerated by the cruelty of the clergy, and the burning of heretics, with other measures taken in their short-sighted wisdom to extirpate opinions, and destroy a work planned by the Lord of Hosts, and directed by unerring wisdom.

Henry V. succeeded his father in 1413. His early years had been dishonourably distinguished by riot and dissipation; but no sooner were the reins of government in his hands, than all the energies and activity of his mind and body were directed to honourable and useful pursuits. His old companions were provided for, and the laws administered with the strictest justice and regularity. Taking advantage of the disorders that reigned in France, Henry invaded that country with 30,000 men in 1415. The celebrated victory of Agincourt enabled him to conclude a peace on terms which rendered the English king no less powerful in France than in England. Henry married Katherine, daughter of the French king, and it was agreed that should they have a son he should be heir to both kingdoms. The life and reign of Henry were short; but very few monarchs have left such high claims to respect and admiration as Henry elicited by a reign of ten years: he died in 1422.

During the reign of Henry VI. England was a sufferer by all the confusion and misery of a long minority. This was followed by the horrors of a civil war. Henry was a poor creature, of a weakly body, and still more feeble mind, the tool and creature of those who, influenced by venal or base motives, chose to take the trouble of guiding him. He was married to Margaret of Anjou, a woman of masculine mind, uncommon capacity, and great talents for government. Had Margaret reigned alone, or been the wife of a man whose talents commanded respect, she would have been a noble and shining character; but unfortunately united to a man whom she despised, she more frequently involved the kingdom in confusion than produced peace by her influence. During this reign the French began to recover the possessions they had previously lost to the English; the Maid of Orleans, having inspired her countrymen with some of her own enthusiasm, chased the terrified English from their dominions. But the civil commotions which followed were more injurious to England than the loss of France. Richard, Duke of York, advanced his claim to the throne occupied by the House of Lancaster, and two rival factions rent the nation in twain. In this contest the powerful mind of the queen was strongly contrasted with the imbecility of her husband. She repeatedly defeated the forces of the Duke of York in person, obtained the freedom of the king, and deserved a better fate than awaited her, after her unpre-

cedented valour and devotion to the royal cause, and the death of her old enemy, the Duke of York.—Edward, son of the Duke, put himself at the head of the remnant of his father's army, pushed on to London, and in 1461 was proclaimed king.

Edward IV. had now obtained the crown, but his possession of it was very insecure. The queen had still an army, and met the army of Edward in the open field, where the House of York gained a complete victory. Warwick, who had in fact placed Edward on the throne, offended by his marrying Elizabeth Woodville, soon taught him to fear his power, and after some struggles forced the king to fly, and replaced Henry on the throne, from which he had formerly driven him. Edward soon returned, and in a bloody battle Warwick was killed, and his army destroyed. Thus expired the last prop of the unhappy Margaret of Anjou. The imbecile Henry was confined in the Tower until his death. Margaret was ransomed by the king of France, in which country she lingered out her sad existence. Edward, unopposed, indulged his evil passions in punishing former offenders, and all who excited his ready jealousy; he died in 1482, and was succeeded by his son.

Edward V. was but thirteen years of age when his father died. The Regent, Gloucester, formed the design of mounting the throne. Deformed in body and mind, no sense of justice or honour impeded his progress: having made himself master of

the persons of the king and his brother, he confined them both in the Tower, under pretence of security. Lord Hastings and other noblemen, who were faithful to the princes, were put to death. The young king and his brother soon fell victims to the vile and base acts by which Gloucester succeeded in usurping the throne, under the name of Richard III. His right to the crown was confirmed by Parliament; and to render it even more secure, he formed the resolution of poisoning his wife, Anne, daughter of the Earl of Warwick, and marrying Elizabeth, eldest daughter of Edward IV. The throne, however, gained by so many crimes, was destined to be held but a short time; his cousin, Henry Earl of Richmond, the last branch of the line of Lancaster, landed in Wales, and met Richard, with a large army, on Bosworth Field, where Richard found a more honourable death than his vices deserved.

Henry was proclaimed King on the field, and crowned in 1485, under the title of Henry VII., and the following year married Elizabeth, daughter of Edward IV., thus ending the dynasty of the Plantagenets, and uniting the factions of York and Lancaster, which had for so many years filled the kingdom with discord and battle. The malcontents of the House of York were still numerous; even the birth of a son, uniting all the claims of both Houses, could not allay animosities. Henry's prepossessions against the Yorkists were inveterate, and his temper led him to terrify them into obedience by severity,

rather than court them by kindness. Several impostors, personating the young Duke of York, who, report said, had escaped his uncle's cruelty, contributed to perplex and disturb his reign; he, however, succeeded in putting down all opposition, and establishing his authority. In political affairs he was the most useful king that had filled the English throne since Alfred; he promoted industry and commerce; and expended 14,000*l.* in building one ship, called "The Great Harry," which may be considered as the foundation of the English navy. The Government, ere this, always hired or pressed vessels of merchants. Henry died in April, 1599.

Henry VIII. ascended the throne at eighteen years of age, under very auspicious circumstances. He was prevailed upon, against his will, to marry Catherine, *infanta* of Spain, widow of his brother. Seduced by the artifices of the Pope and the King of Spain, Henry entered into league with them against France, which involved him in wars with France and Scotland alternately, until his treasures were quite exhausted. Wolsey, at once Archbishop of York, Bishop of Durham, a Cardinal, Pope's Legate, Lord Chancellor of England, Prime Minister of State, and master of Henry's thoughts and affections, endangered both his own and his master's power by endeavouring to raise money. Henry, having seen and loved a younger woman, desired to divorce Catherine on pretence of conscientious scruples; but the Pope was too closely allied to her family to yield ready assent. Wolsey

was despatched to use his influence with the Pope, but was in the state of a man serving two masters, and offended both. Henry decided on acting for himself, and obliged the clergy to pronounce a divorce. He then married Anne Boleyn, but afterwards accused her of infidelity, and caused her to be executed. Jane Seymour, one of her maids of honour, succeeded her, who dying in child-birth, Henry married Anne of Cleves, but would not live with her. His next wife was Catherine Howard, niece to the Duke of Norfolk, who shared the fate of Anne Boleyn. His last wife was Catherine Parr, who proved a kind mother to his daughters, and survived him. It was during the vicious reign of this bad man, that the Reformation took place in England. Henry, although he had written a book in defence of the Catholic faith, gladly seized on an occasion that offered him the means of possessing the wealth which had, for ages, accumulated in the churches and monasteries. His caprice, however, in matters of faith, was as conspicuous as in marriage; his great aim was wealth to lavish on his vices, and for this he overturned the institutions, and dispersed the ecclesiastics without mercy. Henry seems to have been a bad man, used as an instrument by Providence, to bring about a great and glorious work, of which no honour nor merit is due to him. He died in 1547, and was succeeded by his son Edward VI.

Edward was but nine years old when he succeeded his father; his short reign, or rather that

of the Regent Earl of Hertfort, afterwards Duke of Somerset, was distinguished chiefly by the support and encouragement given to the Reformers, and the consequent success of the Reformation, which made rapid advances under this pure-minded, amiable, and excellent young man, who was removed from the evil to come by consumption, in the eighteenth year of his age, when by the intrigues of Dudley, Duke of Northumberland, his lovely daughter-in-law was raised to the throne for a few days only, an elevation which, under the cruel Mary, lost the lives of both Lady Jane and her husband, Lord Guildford Dudley, and taught the politic but mistaken Duke how short-sighted and fallible is human wisdom, and worldly ambition.

Mary, daughter of Henry VIII., by Catherine of Arragon, was undoubtedly heir to the crown, and obtained it without difficulty. She was a furious bigot, hating everything opposed to the Roman faith, and found in Bishop Bonner a kindred spirit, ready to execute her cruel mandates to the utmost letter. Hence all Edward's laws were abrogated, and the fires of Smithfield kept in a blaze with Protestant martyrs.

Political motives induced Philip of Spain to marry Mary, but her subjects would not allow him any share of power, an affront he bitterly resented, and revenged on his wife, who appears to have weakly attached herself to a man who cared not for her or her interests. By his inattention Calais was lost to the English, which, added to

other griefs and vexations, broke the hard heart of Mary, who died in 1558.

Elizabeth, a daughter of Henry by Anne Boleyn, succeeded her sister Mary. Elizabeth was attached to the Protestant faith, and resolved to establish it in England, to which she found but little opposition, as Mary's persecutions had rendered the very name of the Catholic faith odious. Having concluded a peace with France, Elizabeth found work for her active vigorous mind nearer home. Pope Paul denied her legitimacy and right to the crown, claiming it for Mary Queen of Scots. To put it out of Mary's power to assert and press this dangerous claim, was a great point in Elizabeth's policy, and unhappily want of prudence in Mary, and the offence her gay continental manners gave the formal puritanic Scots, but too effectually aided the artful purposes of Elizabeth, who in the youth, beauty, and fascinations of her lovely cousin and rival, found cause for a deadly hatred, that led her to take advantage of the unhappy Mary's confidence, and keep her a close prisoner for eighteen years, and then, by asserting a prerogative to which she had no right, bring her to the scaffold.

Philip of Spain, actuated by bigotry and personal animosity, determined to attack Elizabeth in her own dominions, and annihilate her and her heretical kingdom together, and for this purpose fitted out the largest and most powerful fleet Europe had yet seen, manned with good sailors and soldiers. But a higher power than Spain or

England overruled the destined Armada : what the navy of Elizabeth could not do, was done by the Lord of Hosts. The winds blew, and the devastating tempest finished the destruction begun by the English fleet. Elizabeth was particularly fortunate in her ministers, to whom she owed much of her glory, but inheriting her father's capricious temperament, with the intolerant spirit of her sister, she was an uncertain friend, and a wayward haughty mistress, vain, violent, and overbearing. Still her character was colossal as a queen. Lord Burleigh always spoke of her as "the wisest woman he ever knew." Worn out with care and the canker-tooth of a reproachful conscience, Elizabeth died in 1663, and was succeeded by James VI. of Scotland, who, as grandson of Henry VII.'s daughter, was nearest heir to the crown.

When James I. ascended the throne, the Catholics looked for toleration from a prince born of a long line of Catholics, whose mother had been a martyr to their cause. The Presbyterians, on the other hand, expected much from a prince educated in Presbyterian principles. But James disappointed both parties, destroying alike their fears and their hopes. Dissimulation was a leading feature in his character, and unlimited power the first desire of his heart. Disappointed and angry, the Papists formed a plot for destroying the king, his family, and the whole parliament ; the conspiracy was happily discovered, and the conspirators suffered as they merited. James, unfortunately,

had high notions of the royal prerogative, without the power of maintaining it: hence his reign was a perpetual struggle between the crown prerogative and the rights of the people. He was extravagant and lavish in court and personal expenses, so that he was in constant money difficulties and disputes. To raise money he sold titles of nobility, and first created baronets at 10,000*l.* each. James desired a union of the two countries, but national animosities and prejudices could not yet be overcome. His reign was inglorious, and he died generally despised, after having filled the throne twenty-two years.

Charles I. succeeded his father, and to the same exalted notions of prerogative, united a stiff, perverse, and sour temper, with harsh, reserved, and dogged manners; unhappily he maintained a resolute adherence to arbitrary maxims, and illegal methods of raising money, so that his government grew daily more unpopular, and his Commons at last refused to grant him supplies, unless they got redress of grievances. In this dilemma Charles pursued the most offensive and infatuated line of conduct, dissolving parliaments, imprisoning members, persecuting and prosecuting all who opposed him, forcing his own high church notions on all ranks and persuasions, and even permitted Archbishop Laud to involve him in an expensive and disastrous contest with the Scotch by forcing on them an episcopacy, against which they were determined. A great struggle for civil and religious freedom now took place. Hampden and Pym

headed the patriots; and Charles, having lost his only effective counsellor, when he basely forsook and afterwards murdered Strafford, found himself unable to contend against the public voice; he now endeavoured to ingratiate himself with the Scots by various means, but they were too prudent to involve themselves in war for a prince in whom they had lost all confidence; they therefore delivered him up to the Parliamentary Commissioners, and under the growing power of Cromwell, who was now not only head of the army, but almost supreme in the kingdom, the unhappy Charles was tried by a self-appointed tribunal of barbarous fanatics, condemned and executed, in 1648. A Commonwealth, for which the people loudly clamoured, was declared; but the power of Cromwell in the nation was now supreme, he was declared Protector, and invested with the prerogatives of a king. During his administration Cromwell maintained liberal views of civil and ecclesiastical polity, with vigour, decision, and promptitude of measures, which, with the terror of his fleets and armies, rendered him as much an object of respect and fear abroad as at home; yet was his power pain, his grandeur misery, his confidence distrust, and his repose anxiety. An object rather of compassion than envy, he died in 1658. Different parties, growing weary of anarchy and its consequent confusion, now began to wish for the old Constitution, and their former race monarchs.

General Monk, a firm friend of the Stuarts, taking advantage of this reaction, soon succeeded in bringing back a son of Charles I., who, with the approbation of all ranks, was placed on the throne in 1660, under the title of Charles II. Unfortunately, no restraint was laid upon the authority of Charles II., who seems to have profited very little by the sad fate of his father; he appeared to consider sovereignty only valuable as a means by which he might indulge his profligacy with impunity. Had the Commons granted all he required, it is probable the reckless good-nature of Charles would have led him to allow them to manage the affairs of the nation as they chose; but to the king's incessant demands for supplies the Commons answered with remonstrances as to his conduct. At this crisis the Duke of York, brother to the king and heir apparent to the crown, openly declared himself a Catholic,—than which nothing could be more offensive to the country. The Commons now refused Charles any further supplies, and he in a fit of anger dismissed his Parliament, and directed the reins of Government in the most arbitrary manner, and, in Opposition to his people, and indeed to all Europe, supported the French king in his measures. The French king supplied Charles with money, and engaged him in a war against Holland, whose naval force was at that time very formidable. Charles brought his reign of folly, extravagance, and arbitrary measures to an end, by dying in 1684.

The Duke of York succeeded, in default of his issue, under the title of James II.; and, as he rendered himself more odious than his father and brother had done, exerted his power to the verge of despotism, in the attempt to re-establish Popery in his dominions. The opposition he should have convinced him that this was impracticable; but opposition only exasperated his mind, and rendered him even more obstinate, that it was evident he preferred the ruin of his country to a failure in his mad designs.

In this extremity, the eyes of the people turned on William Prince of Orange, nephew and son-in-law to James, who eagerly accepted an invitation to come over to England. James, deserted by his adherents when his power waned, fled to France and soon after entered a monastery, taking himself the oaths of the order. William was received very joyfully, and after some debate with his wife, the princess Mary, raised to the throne as king and queen of England, and crowned William and Mary. The people, taught by experience the necessity of defining the powers and privileges of both prince and people, now framed a bill of rights which fixed the English government in that happy state of freedom and moderation which has ever since characterised it. But though this revolution was brought about with apparent ease and unanimity, William was not quite popular, nor James entirely without friends, particularly among the Roman catholics of Ireland, where James appeared in person, and was so

the head of an army ; but at the memorable battle of the Boyne his last hope expired, and William found himself firmly seated. James again took refuge in France, and soon after entered a monastery, more gratified and happy in the title of saint, than he had ever been in that of king. William was involved in hostilities with the French till the battle of La Hogue made an impression on the French never to be forgotten. After a quiet, tranquil reign, William died in 1702, and was succeeded by the Princess Anne of Denmark, the nearest protestant heir to the crown.

Anne's administration was distinguished by violent animosities among the existing factions, when the terms Whig and Tory expressed open and undisguised hatred; and a war with France, in which the battles of Blenheim and Ramillies, under the command of the Duke of Marlborough, raised the reputation of English arms and valour to an unprecedented height of glory and renown. But the great event of this reign was the union of Scotland with England, a measure which has tended to increase the power, the importance, and the peace of both countries. After a reign of incessant altercation, Anne died in 1714, and with her ended the line of Stuarts, who had swayed the sceptre of England 112, and that of Scotland 343 years.

George I., elector of Hanover, maternally descended from Elizabeth, daughter of James I., succeeded Anne on the throne of Great Britain. Under this prince the Whigs regained that place in the national councils, of which they had been de-

prived in the former reign. George was warmly attached to his paternal continental minions to deal even-handed justice on his subjects, and in struggles between factions, sacrificed the interests of Britain to those of Hanover. In 1715, the earl of Mar raised a standard of rebellion in Scotland, and proclaimed the heir of the house of Stuart, Chevalier St. George, king. Some other spirits among the malcontent Scotch joined him, but the duke of Argyle put their forces completely to the rout, and the Chevalier, with Drummond, and a few others, escaped to the continent. The Spaniards attempted to defend the cause of the Pretender by sea, but their fleet was dispersed by a storm off Cape Finisterre. George died at Osnaburg in June, 1727, and was succeeded by his son George II., who with his father inherited his father's partiality for his continental possessions: but the British monarchs had learned, that to oppose the will of Parliament was to draw mischief, and even ruin, on themselves. George, therefore, retained his father's minister, Walpole, who is said to have been the minister who used illegal means to secure his continuance in power. Like every man in power, he had enemies; and this part of his conduct was easily seized on to disgrace the minister, who soon resigned, and was created earl of Orford.

The German territory was at this time a theatre of warfare, and Hanover was in danger. George, to save his favourite dominions, was soon a

head of an army; found himself at Dettingen, and obtained a complete victory. Another effort was made in favour of the Pretender by his son Charles Edward, who crossed over to Scotland and proclaimed his father king at Perth. Having gained a battle at Preston Pans, he marched into England, but finding himself disappointed in the assistance he had expected from the English Tories, retreated towards Scotland, and after several defeats, found himself obliged to hide in the wilds of Inverness, there, for a long time, scarcely daring to beg the scanty food he eat, and with difficulty effected his escape, with Cameron of Lochiel and a few other followers, in a vessel hired for the purpose. This reign was constantly disturbed by wars and disputes with Scotland or France and India. The French provoked reprisals on the coast of America, by which they eventually lost the best part of their possessions in North America, and many of their West India Islands. A peace was at last concluded, on advantageous terms, though not to the satisfaction of the country. It was during this war that George II. died, in 1752. The alteration of the style, according to the Gregorian Calendar, and in unison with all Europe, took place, by merging the days between the third and the fourteenth of September.

George III., grandson to George II. and eldest son of the late Duke of York, ascended the throne in 1760. He had been born in England, and gained general good will by declaring that he con-

sidered himself an Englishman, possessed of an English heart, and determined to support the religion of his country, and administer her laws faithfully. It was so long since the English had been governed by one of their own country, and they had suffered so much under the rule of foreigners, that they gladly hailed their half-English king, and gave to him the confidence and affection of their warm hearts. George, on coming to the Crown, was well disposed to procure peace to his dominions; but his ministry judged it prudent to continue hostilities until more advantageous terms could be obtained from the French. After this unsatisfactory conclusion of a war, which had been undertaken chiefly in defence of the colonies in America, when the ardour of defeat was over, and people began to think calmly on the great increase of taxes produced by the war, a general feeling arose that it was unfair the whole burden should fall on the English, and that the American colonists ought to help to pay some part of the interest on a debt incurred for their benefit. The colonists did not deny the justice of this, but claimed to be represented in Parliament, and thus only taxed by their own consent. Rational as this appears, it was not granted. The impolitic and unfortunate administration of Lord North, for twelve successive years, were deaf and blind to the complaints, remonstrances, and representations of the colonists, as well as certain demonstrations of feeling in different parts of America, and persisted in levying port-dues, duties on imported goods, particularly

tea, and other injudicious measures, until rebellion broke out in America; the colonists proclaimed themselves independent of the mother-country, and war was declared: the excitement in England was terrible, and continued to manifest itself on various occasions, during the seven years' continuance of that calamitous war. A frightful scene of confusion and riot was exhibited, not only in London, but in many parts of England, during the summer of 1780, by the excited populace, on account of the Catholic Relief Bill, fermented by the madman-like conduct of Lord George Gordon. About this time the famous *armed neutrality* of the Empress of Russia aimed a severe blow at our continental connections, and the appearance of Hyder Ally threatened the safety of our possessions in India. All this news contributed to raise the feelings, and call forth the energies, of the English nation. At length the administration of Lord North and that of the *Coalition Ministry* came to an end, and Mr. Pitt, then only in his twenty-fourth year, was appointed first Lord of the Treasury and Chancellor of the Exchequer, and immediately concluded a peace between Great Britain and the colonies, acknowledging their independence, under the name of the United States. Thus, after a ruinous warfare of seven years, the colonies were for ever lost to England. A treaty, offensive and defensive, was also signed with Prussia, in 1788. But England was not long permitted to enjoy peace. The situation of France soon became an object of engrossing and

overwhelming interest to all Europe. Britain was not among the least interested spectators of that political and moral revolution which now convulsed what has been called her hereditary monarchy. The writings of Burke, Paine, Mackintosh, and others inflamed the zeal of conflicting parties in several instances, far beyond the bounds of moderation.

On the execution of Louis, the French Ambassador was ordered to withdraw within six days. The English Ambassador had been previously recalled, and war was declared by the national convention of France against England and Holland early in 1793. Thus commenced a war, then considered by the British cabinet a matter to be easily adjusted, that for twenty-five years deluged Europe with blood, overturned dynasties, dethroned kings, unseated popes, swept countesses from modern maps, raised men of low degree only to the first ranks in the senate, the army and the navy, but to principalities and thrones, and gave to one individual the greatest extent of power and command the world ever saw united in the same person.

The resources of France were stronger than had been calculated on, and after a few years of insane fury and slaughter at home, the courses of her armies, under such men as Moreau, Kleber, Hoche, and Buonaparte, could only be met and arrested by the Nelsons, the Sydney Smiths, the Abercrombies, the Moores, and the Welles of Great Britain, who, during the tremendous

struggle with the Republic, the Consulate, and the Empire of France, and by them embroiled with other kingdoms, stood single-handed, not only against all Europe, but at one period against that and America also. The strength of Christian England, however, was in a praying people. The God of battles triumphed, and in 1815 a treaty of peace was finally concluded in Paris, of which the English were a second time in possession. After the British troops had driven the hitherto unconquerable Buonaparte from the country, and restored the old Bourbon family to the throne, it was agreed, that in order to support them in their newly recovered dynasty, 150,000 troops should remain in Paris for five years, under the command of the Duke of Wellington; and Napoleon, the "World Tyrant," finding it impossible to escape, surrendered himself to Captain Maitland of the *Bellerophon*, expressing a hope that he should live in England for the remainder of his life. He was, however, not an English prisoner, but a prisoner of the allies; and it was determined to fix his future abode on the Island of St. Helena, where he lingered a few wretched years, and died a miserable object of blighted ambition.

During the last ten years of the life of George III. he was deprived of sight and reason, and lived entirely at Windsor, under the watchful care and affectionate superintendence of his faithful wife and queen, until her death. The Prince of Wales, afterwards George IV., was appointed regent. It was during his regency that peace was

concluded with France. The Algerines were subdued, and their cities laid in ashes, under Lord Cornwallis, and prosperity everywhere crowned the British name in foreign undertakings. But at home disaffection and riots disturbed the king while the country suffered severely from great commercial distress, when a painful event added to the general gloom.—The only daughter of the king and heiress to his throne, had married Leopold of Saxe Coburg,—a union that, from the solid basis on which it was founded, promised a life of domestic felicity. But the all-wise Disposer of events was fit to disappoint her people's hopes, by calling her from a state of earthly peace and glory, we thought her to one of eternal bliss and glory unspeakable. In the year 1817, scarcely two years after her nuptially propitious marriage. As soon as she had recovered a little from the stunning effects of unexpected loss, the unmarried members of the royal family began to seek alliances ;—the Duke of Clarence, in 1818, married the Princess of Prussia, and the Duke of Kent the Princess of Leiningen. This year Charlotte, queen of George III., died, crowned with age and domestic virtues, and in 1820 the “good old king” called from time into eternity.

The first act of George IV. showed he knew how to govern: all the officers of the Crown were retained, and he made a public declaration, “it would ever be his desire to promote the happiness and welfare of his people, and maintain unimpaired, the religion, laws, and liberties of

kingdom." The reign of this monarch was signal-ly marked by commercial difficulties and speculations. Among the latter was the memorable joint-stock companies, which led to the ruin of many opulent families, who thus made haste to be rich. In 1824 a war broke out between the East India Company and the Burmese sovereign, which lasted about three years, but ended by the subjugation of the Burman empire, and a vast increase of territory to the East India Company. In obedience to the voice of a certain part of the nation, a Bill was brought into and passed both Houses of Parliament for the emancipation of Roman Catholics, but was lost. It was, however, often renewed, and in 1829 it obtained the King's sanction, and, since that time Roman Catholics are allowed to sit in both Houses of Parliament, and fill the highest offices of state. George IV. died in 1830, and was succeeded by his brother,

William IV., on whose accession all the ministers and great officers were reappointed to their places: but this was of short duration; the necessity of Parliamentary reform, which had so long agitated the nation, was now brought forward with renewed vigour; circumstances, both foreign and domestic, favoured the cause; the changes in France inspired the English with new hopes; Lord John Russell framed a Bill, a change of Ministry took place, and a House of Commons, fashioned according to their own mind, followed. The success of the measure now seemed certain. It was, however, lost this session, and dreadful outrages

throughout England was the consequence; and not only in England, but in Scotland and Ireland, was the same determination manifested. In the midst of this distraction, the Almighty permitted the destroying angel to pass over the country in the form of pure Asiatic cholera morbus, which proved fatal to thousands, one out of every three attacked by it falling a victim to that which must be regarded as a punishment on a guilty nation.

In the summer of 1832 the long-desired measure of a Reform Bill was triumphantly carried and thus the greatest change that had taken place in the British constitution since the Revolution of 1688 was brought about, and the storm, which had long rocked the country, was hushed to peace. The first Reform Parliament met in February, 1833, and their first business was to break asunder and shake off entirely the shackles of slavery from the West India slave population. A remuneration was granted to the slave-holders, and thus the dark stain of slavery was washed out of the British annals.

Ireland was at this time in a deplorable condition; famine, disease, and crime devastated the country; all these were in a great measure the children of that dreadful agitation, so recklessly kept alive by the pretended friends, but real enemies, of that ill-fated country, which has been for a long series of years, and still continues to be, the greatest difficulty which the British ministry has to encounter. During the session of 1835

the famous bills for the reformation of Corporations, the Poor Laws, the Registration and Marriage Bills, were all passed, by which dissenters were allowed to celebrate marriages in their Chapels, agreeably to their own forms and ceremonies, with many other privileges. William IV. died after a short illness, in June 1837, in the seventy-third year of his age, and tenth of his reign, universally loved and respected; and was succeeded by Alexandrina Victoria, only child of the late Duke of Kent, then in her eighteenth year.

As Queen Victoria I., her accession to the throne was hailed with more than ordinary enthusiasm: all ranks and all parties in the state and Kingdom, vied with each other in manifesting their affectionate allegiance to their youthful and interesting sovereign. In November the city of London distinguished itself by giving the Queen a most magnificent banquet, and nothing could exceed the glad enthusiasm that prevailed as she passed through the brilliantly illuminated streets, or the splendour of the whole event. The following year was rendered remarkable by a turbulent spirit which broke out among the lower classes, who now formed themselves into a regular but badly organized body, under the name of Chartists. Government found it necessary to take up the matter, and by vigorous measures they have been kept down, though not disbanded. In February 1840, her Majesty was united in marriage to her cousin Albert, Prince of Saxe Coburg and

Gotha, a marriage which has been productive of much mutual domestic happiness, and every way conducive to the welfare of the nation, and is none more than in presenting a bright example of conjugal and parental felicity, combined with the performance of every relative and national duty. About this time, disputes respecting the contraband traffic in opium, carried on in the East Indies, brought on collisions between the Chinese authorities and the British subjects at Canton, which led to hostilities, that, though quelled for a time, broke out again with renewed animosity, and led to a war with China, which was, however, concluded on terms very advantageous to Great Britain. Great exertions have been made, and are now making, for the christianizing of the Chinese people. Missionaries have been sent out by the Church and by the Methodists; churches and chapels have been built, the Bible has been extensively circulated, the gospel preached, and its doctrines promulgated widely, with a fair prospect of bringing thousands, and happily the whole large population of China, experimentally acquainted with the way of salvation, through the atoning blood of a crucified Redeemer.

The British arms were also very successful in war with the Affghans in the East Indies; but it was a bloody, unchristian war, and deeds were committed at which humanity instinctively shudders. It is true the Affghans were barbarous, fierce, and cruel in disposition, but their opponents were professedly Christians, and should

remembered, that, "Vengeance is mine; and I repay it, saith the Lord." In the following the Ameers of Scinde provoked the British to warfare, under Sir Charles Napier; the result of which was, that the six Ameers, who governed that country with a rod of iron, were captured, and the whole of Scinde annexed to the British dominions, and Sir Charles Napier appointed Governor; since which he has been employed in a noble contest with the Sikhs, in which the British army was again successful. Several important Acts have been passed, tending to ameliorate and move the cause of discontent, and bring into such measures as shall give freedom and peace to every part of the British dominions; among these was the repeal of the corn-laws, so long laboured for in vain. This was perhaps facilitated by a failure of the potato crop, by which Ireland in particular was threatened by famine, the wisdom of this measure appears to have been manifested in the ensuing autumn and winter. The potato crop having failed a second year, distress and famine made dreadful ravages in the seven parts of Great Britain; but in Ireland, where the chief means of subsistence is the potato, pestilence and fever raged in all their horrors, sweeping away thousands. The Government and the people of England, forgetful of their domestic concerns, willingly and liberally stretched out the hand of brotherly and Christian kindness, without which the whole nation must have perished. A season of general fasting and humiliation was ap-

pointed, and the Lord heard and answered prayer. A fine summer and abundant harvest followed, and the song of praise and thanksgiving resounded through the country. Would we could say, peace and joy were diffused over Ireland; but nothing done or said by the English can produce satisfaction, to say nothing of gratitude. It boots not that in every city, town, and village, active exertions and domestic privations are being daily made to procure the means of aiding our Irish brethren. The old animosity of the Celt against the Saxon remains, and is but too frequently exhibited in awful, frightful scenes of rapine, murder, and bloodshed. Great commercial distress has marked the year 1847, and failures to an enormous amount have reduced many wealthy families to poverty. Yet is England a favoured nation above all others, and ready above all others to aid, assist, and shelter the distressed of all countries, and is at this moment opening her arms to receive and comfort the exiled Louis Philippe of France, with his children and grandchildren, driven by a fickle, restless nation and people (who have just declared themselves a republic), to seek safety and protection from hereditary foes. Surely we are a people, a church, and a nation, blessed of the Lord, and great in the might of Israel's God.

SCOTLAND.

The Scots, like every nation whose origin is uncertain, claim a very high degree of antiquity ;

but the first part of their authentic history is their invasion by the Romans under Agricola, in or about the year 72. The Romans found the Scots in a state of barbarity, and, having driven them into the shelter of their inaccessible mountains, rather than subdued them, erected a chain of forts which protected the frontiers of the Roman provinces in England. In the time of Adrian the frontiers extended from Tynemouth on the east, to Carlisle on the west. These fortifications and ramparts were frequently broken down and rebuilt, as their incursions into England and the defence offered rendered necessary. Before the Romans withdrew from England, we find them building a stone wall across the north of the island, to protect the islanders from those savages the Picts and Scots, two rival nations who possessed the country we call Scotland. The Picts were afterwards vanquished by Kenneth, who in 845, united the two kingdoms under the name by which it is now known; but for a long while nothing interesting offers in its history, unless it may be the piratical incursions of the Danes. In 1056, Malcolm, having avenged himself on the murderer of his father, Macbeth, found himself involved in a war with William of Normandy, who, after coming to England, marched against Malcolm, and forced him to do homage for his territory.

After the death of William, Malcolm made a struggle to recover his kingdom — a struggle

which continued with Donald Bane, Duncan and Edgar, until 1124. David, who succeeded, was a weak prince in body and in mind. He was succeeded by his brother William, who recovered from Henry II. of England the earldom of Northumberland, but wanting caution was taken prisoner, and detained in captivity until he consented to declare himself a vassal to England, and do homage for his whole kingdom. Richard, however, remitted these terms, and declared Scotland an independent kingdom partly for the payment of 10,000 marks, and partly hoping to make friends of the Scots, while he went on the crusade into Palestine. William continued a faithful ally to England until his death, but his son and successor, Alexander II., took part with the English barons in their contentions with John. His son, Alexander III., was betrothed to the daughter of Henry III. When he proceeded to England to claim his bride, her father thought it a good opportunity for demanding a renewal of vassalage; but the firmness of Alexander induced him to give up his absurd pretensions, and Alexander succeeded in adding to his dominions several neighbouring islands, the Orkneys and Shetlands in particular. He was killed while hunting at Kinghorn in 1285. The English throne was at this time filled by Edward I., who had long wished to add Scotland to his dominions. Alexander, before his death, had given his daughter Margaret in marriage to the king of Norway, and the Scots declared that the posterity of Margaret should be

accounted lawful heirs to the throne. Margaret died, leaving one child, Margaret, usually called "The Maiden of Norway." Edward, hoping to unite the kingdoms peaceably, sought "the Maiden" in marriage for his son the Prince of Wales; but this union was prevented by the death of the Princess in 1270.

The line of Alexander being thus extinguished, many claimants, each supported by specious pretensions, appeared. Among them were John Baliol and David Bruce, both descendants from David I. through their grandfather, David, Earl of Huntingdon, who was grandson to David I. The imperfect law of succession could not decide between claims which both were determined to maintain. Civil war was therefore threatened, when Edward offered his judgment in the decision. Anxious to avoid the horrors of war, this offer was eagerly accepted. Edward demanded that all the strong places should be put in his possession, that he might be able to enforce his decision. This was granted, and Edward thus supported, affected to consider Scotland as a fief of the English crown, and as such, subject to the King of England as superior. Of the claimants he decided Baliol to have the best right. He was therefore clothed in the pageantry of royalty, but constantly made to feel his inferiority by being summoned to London on the most frivolous pretences, and treated with insult and contumely, which unable to bear, he retired in indignation to his own country, and Edward proceeded to gain

by conquest what he had failed in securing cunning.

Among the heroes who defended the liberty of their country was Sir William Wallace, a man of good birth, undaunted valour, immense stature, unequalled strength, insensible to fatigue or hunger, and full of genuine patriotism. His spirit revived the dying embers of freedom. A large number of forces collected around him, and for a time victory followed their footsteps. They went to Stirling and all the way into England, and through the northern counties they conquered all before them, and Wallace was declared regent of Scotland; but victory, as if affrighted at this, then deserted him. Edward, who had been engaged in war in France, returned, placed himself at the head of his army, and soon made himself master of the kingdom; while Wallace the noble champion of his country's rights, after encountering unnumbered difficulties and dangers, was by the treachery of his friend, Sir John Monteith, betrayed into the hands of Edward, carried to London, and humanely executed as a public traitor.

Robert de Bruce, grandson of the Bruce who had disputed the crown, now made a strong effort to place himself on the throne, which after much trouble and fighting he effected by a decisive battle at Bannockburn, near Stirling, in 1314, against Edward II.

On the death of Robert Bruce, 1328, his son David II. was proclaimed king, but had to contend with Baliol. In a war between England and

Scotland he was taken prisoner, and detained in captivity eleven years, when he was liberated on paying 100,000 marks, after which he returned to Scotland, and shortly after died in 1371.

David was succeeded by his nephew, Robert II., the first of the family of Stuart who sat on the throne of Scotland. In his reign was fought the battle of Otterburn, on which the ballad of Chevy Chase is founded. He died in 1399, and was succeeded by his son John, also called Robert. Scotland was now at peace with England, but rent to pieces by the feuds of its own barons, among whom were the famous Earl Percy, and Duke of Albany. Robert sent his son James to France for education and safety; but in passing through England he was taken prisoner, which so affected his father that he died of grief, and the Duke of Albany was appointed regent. The young prince was detained a prisoner nineteen years, during which time he was most carefully educated. On his return he endeavoured to correct those abuses which the feudal system in its rudest form had introduced; but this was displeasing to his ferocious barons, to whom he soon became odious. He was assassinated while at supper in a convent near Perth, in 1437.

His son, James II., was but seven years old at his father's death. A long and feeble regency occasioned many miseries; but James, on assuming the reins of government, gave promise of great prudence and wisdom, promise which raised the hopes of his people, only to disappoint them. He was killed

by the accidental bursting of a cannon, at the siege of Roxburgh. His son, James III., was then scarcely seven years of age, and again the country groaned under the miseries of an aggressive regency, from which the manhood of James did not relieve them. Of a poor, mean disposition, and contemptible abilities, he chose his associates from among men of low birth, and vulgar, coarse habits; hated the nobility, and was in turn despised by them. In an insurrection amounting to open rebellion, James led his forces to an engagement near Stirling, but, like a coward as he was, at the first onset was thrown from his horse, and being carried into the house of a miller, was stabbed by a person who visited him under the guise of a priest. James IV. was crowned while a minor, but his reign seems to have been more free from disaster, and, on the whole, more quiet and prosperous than that of any of his predecessors. He married the daughter of Henry VII. and thus laid the foundation of a union between the two kingdoms. Yet he was induced to espouse the French interest against the English, and fell in the battle of Flodden Field, in 1513. The death of James once more imposed a long minority, more turbulent, if possible, than any that had gone before it, notwithstanding the influence of the queen-mother to prevent hostilities with England.

James V. inherited the strong attachment of his family for France, which induced him to marry the daughter of a French king. This princess

did not long survive, and James soon after married the intriguing Mary of Guise. James, in many respects, saw and pursued the welfare of his country, but his connexion with and attachment to the French, gave him a distaste for his own nobility, and estranged them from him, besides embroiling him with the English. Had James been a patriot, he might have been useful, valuable, and beloved; but, wanting patriotism, he failed in all his undertakings, and died of grief a few days after his disgraceful defeat at Solway in 1542.

Mary of Guise, the queen-mother, had the art to get herself appointed regent, and though detesting the progress the Reformation was then making under Elizabeth, contrived to hide her malice, and to live on tolerable terms with her nobility. The young and beautiful Mary, only a few hours old when her father died, was early sent to France, to be educated, and, under the influence of her relatives, the Guises, was married to the eldest son of the King of France, who ascended the throne under the name of Francis II., but did not live long enough to enjoy the power he inherited.

After the death of Francis, Mary returned to the land of her birth, and ascended the throne of her ancestors; but, alas! she did not bring with her the mind, manners, nor habits suited to her native land, nor the prudence and steadiness that might have saved her from the faults and misfortunes of her ancestors. Hoping to

render her more thoughtful, the people urged her to marry ; and consulting her taste and fancy rather than the policy that would conduce to the good of her country, Mary married Lord Darnley, a man of fine person and agreeable fascinating manners, but a foolish, headstrong, brutal character. His coarseness, neglect, and ill conduct soon turned the warm love of Mary into bitter hatred. Her chief pleasure seemed to be in the company of an Italian singer, called David Rizzio.

Surrounded as she was by the cold, formal, puritanic Scots, the imprudence of Mary found but little excuse or lenity. Still, with the infatuation of her race, she persevered in seeking her own gratification, until Darnley caused Rizzio to be cruelly murdered, almost before her face ; when Mary's warm heart suddenly grew hard, and thirsted for revenge. Meanwhile Bothwell, a man of unbounded ambition, contrived to gain the favour of Mary by various services. Influenced by these, and urged by resentment to revenge the murder of her favourite, she did not prevent—to say no more—that of her husband ; and, to give the finishing stroke to her crimes, married Bothwell, who was well known to have been a principal in, if not the perpetrator of, Darnley's untimely end. She was made a state prisoner, and condemned by all ranks ; notwithstanding which she effected her escape, and threw herself on the protection of Elizabeth of England, who but too eagerly seized the opportunity of crushing one whom she con-

sidered a rival, and hated for her beauty and fascinations.

After a cruel imprisonment of nineteen years, the unfortunate Scottish queen ended her life and her suffering on the scaffold, leaving an indelible stain on the name of her proud, unfeeling relative, who had taken on herself the office of protectress.

James VI., the son and successor of Mary, after having governed Scotland for some time with a tolerable share of ability, was, by the death of Elizabeth, called to the English throne, in right of his descent from Henry VII. From that time Britain was governed by one prince, but Scotland had its parliaments and a shadow of independence, until the reign of Queen Anne, when, by the Union, Britain became one kingdom. This measure at first gave great offence to all ranks in Scotland; but the rapid progress in wealth and in power made by Britain, and largely participated in by Scotland, has long since reconciled all parties, and fully proved the wisdom of the measure.

IRELAND.

The Irish even surpass the other parts of Great Britain in their pretensions to an existence of remote antiquity, the Deluge itself scarcely limiting their retrospective views. If we believe some of her native writers, Ireland "was a great and flourishing kingdom when the whole con-

continent of Europe was a continued forest, or peopled by tribes not surpassing in civilisation the Indians of North America." We are not informed by what desolating reverses this flourishing state of society was destroyed; but certain it is, that the first authentic history we have describes it as fully as rude and barbarous as its British and Gaulish neighbours. There is good historic proof that the Celts either went, or were driven by the Gauls, into Ireland; but when is not so clear. The few glimpses of Irish history that can be obtained, before the tenth century, show that it was invaded by the Romans under Agricola; that at one period it was called Scotia, and that Christianity was introduced about the fourth century. In the sixth century so many holy men were sent out to propagate the Gospel, that it was dignified by the title of *Insula Sanctorum*, or "Island of Saints." When Henry II., taking advantage of the situation of Dermot, carried troops into Ireland, with a determination to conquer the island, he found it divided into five small kingdoms of demi-civilised inhabitants, badly governed, and torn to pieces by fierce and savage contentions. With no great difficulty the whole country was subjugated to the power of Henry, who, having made Strongbow governor, returned to England.

Richard paid little attention to Ireland; but John endeavoured to give it laws, and Henry III. extended Magna Charta to this portion of his dominions.

During several succeeding reigns the Irish, assisted sometimes by the Scotch, sometimes by the French, were found a troublesome and unprofitable appendage to the British crown.

In the reign of Elizabeth the Spaniards assisted the Irish in endeavouring to throw off the English yoke, but did not succeed; on the contrary, Elizabeth fully confirmed the English dominion in that island. James planted colonies from England and Scotland in various parts of the country; introduced a just and impartial administration of justice, and opened the way for future improvements and an increase of civilisation, which gradually took place; but, contrary to expectation, increase of knowledge only rendered them the more dissatisfied, teaching them to believe that they had been unjustly deprived of privileges which they were determined to recover.

The history of Ireland for the last century is only that of resistance to England, and opposition to her government, with insane atrocities and rebellions that must ever stain the page of history.

During the French revolution the French offered to lend them assistance to throw off the yoke of Britain, which they found so hateful. These designs soon precipitated the nation into all the horrors of rebellion and civil war, and the most savage outrages were committed by the "United Irishmen," a society who found means of opening a correspondence with the French Directory; and a plan of invasion having been

concerted, La Hoche, with a few miserable troops, landed in Ireland in 1796, but were soon obliged to surrender unconditionally. It was found necessary to repress the rebellion by rigorous measures. Many of the delegates were seized in different parts. An attempt to seize a castle was, by the force of arms, rendered ineffectual. Several towns were attacked by the rebels, and outrages that disgrace humanity committed. They were, however, weakened by repeated defeats, when Government sent Lord Cornwallis to Ireland as lord-lieutenant—a man whose military talents were as great as his virtues and his administration were exemplary. He immediately held out the olive-branch of peace, and a bill of association was passed, so that at last this alarming rebellion was completely defeated, their French allies having forgotten all promise of assistance to their one puny effort. To prevent as much as possible similar insurrections, and to consolidate the interests of the British empire, it was resolved to unite the kingdoms of England and Ireland. To this a strong opposition was headed by Mr. Grattan; but it was eventually carried, by a large majority, in 1799.

A rash attempt was made in 1803 by a few discontented, wild young men to overturn the present order thus introduced, with no other advantage than ruin to themselves. It was hoped that this measure would procure lasting peace, and prosperity to Ireland; but alas, for that ill-fated country, ill-disposed persons are ever to be

ready to fan into a flame the half-smothered embers of insurrection and rebellion that lie hidden in their excitable, impassioned natures. For many years O'Connell kept the country in a constant agitation, the consequence of which was a frightful state of crime, famine, and disease. In the year 1833, in one province alone there were 196 murders and 2000 burglaries and house-breakings. The cry was "Give us our rights." "Give us Catholic Emancipation." The Government yielded. Catholic Emancipation was granted, by a bill giving them seats in the Houses of Lords and Commons, and all the privileges enjoyed by Englishmen. No sooner was this granted than a loud cry was raised for a repeal of the Union, which O'Connell had even the temerity to propose in the House. In Ireland he traversed the country from end to end, stirring up sedition by collecting monster meetings, and talking the excited multitude into madness. Death has at length released the country from a man who under the guise of pure, warm patriotism was the greatest enemy it ever had.

In 1845 an increased grant was made to the College of Maynooth for the education of the Catholic priesthood. Another measure has been adopted for the enlargement of academical education in Ireland, by which religion and education are divorced, and at liberty to part company. It has been called "a gigantic scheme of godless education." The bill was brought in and carried to conciliate the Roman Catholics in Ireland, but

like every other effort to serve, assist, or co-
it has as yet proved abortive. The failure
potato-crop in 1845 and 1846, produced
and disease to a frightful extent. The
ment and the nation of England rescued
from this scene of death and desolation, but
in making any impression on the better
their nature. The year 1847 was distinguished
by wrong and outrage. Truly this people
rebellious people, and their only cure is
increase of Gospel light and love to God
that is to be imparted, He alone, in whom
are the hearts of all men, can show.

AMERICA.

AMERICA, which extends from north to south of the western hemisphere, and now holds a position of great importance in the scale of nations, was unknown to the ancient world; nor did the moderns conceive of such a country until the indefatigable and enterprising Columbus with incredible difficulty obtaining assistance from Ferdinand and Isabella of Spain, set sail in 1492, with a very small number of men and three vessels to go westward in search of adventure, and after a voyage of thirty-three days amidst the murmurs of a discontented crew, landed at one of the Bahama Islands. He afterwards discovered Cuba and Hispaniola, but never succeeded in landing on Continental America.

Columbus died in poverty at Valladolid in 1506; but the wealth he had brought into Europe tempted many persons to prosecute researches at their own expense. One of these was Americus Vesputius, a merchant of Florence, who started to South America, and from him the country takes its name, though that honour was justly due to Columbus. The wealth and description of the rich and beautiful

country brought home by merchants and other adventurers, raised in the avaricious Spaniards a desire to possess some part of a land abounding in gold, silver, and precious stones.

Fernando Cortez was therefore fitted out with an armed force from Cuba, and departed with a determination to subdue the empire of Mexico, a powerful country inhabited by a polished and intelligent race, under the mild and peaceful government of Montezuma; who, as a nation, ranked very high as warriors among surrounding nations.

Mexico, their capital, was a splendid city, glittering in shops, jewellery, gold, silver, and magnificent palaces; but valiant warriors though they were, they were so alarmed at the sight of armed Spaniards mounted on what appeared to them monsters (for they had never seen horses), that they offered very little resistance. Along the coast, and at their capital, Montezuma met and received the Spaniards with the utmost kindness, more anxious to preserve his people from the effects of their artificial thunder, and the terrific animals that bore them, than to defend his beautiful city. This mildness met a very ungrateful return from the Spaniards, who, having made Montezuma prisoner by stratagem, soon after killed him. The unhappy Mexicans elected Guatemozin their king, and under him made great efforts to recover their freedom from the inhuman and cruel Spaniards, who, in their lust after wealth, spared neither age nor sex: no enormity

was too great or too revolting for them to commit. The poor Mexicans fell in thousands before what they called "the Spanish thunder."

Guatemozin was taken prisoner, and suffered every torture that the unbridled passions of man could suggest. He was accused of having hidden treasures, and to make him confess where they were hidden, no imaginable torture was spared. While extended over a slow fire of burning coals, his high priest, who was suffering the same kind of torture near him, uttered, in his extremity, some words of reproach. Guatemozin mildly turned his eyes on the priest, saying, — "Do I then repose on a bed of roses?" It was by the basest arts, the most lawless plunder, the most cruel, disgusting and inhuman acts of villany, that the Spaniards made a complete conquest of this country.

In 1525, scenes of the same horrible description were again perpetrated by the ferocious Pizarro and Almagro, in the conquest of Peru. Many descriptions have been written, but nothing that the pen can paint will half equal the barbarities of these monsters, miscalled Christians. At length the wretched Peruvians abandoned Cusco, their capital, and were glad to escape with their lives, leaving the mangled remains of those they loved behind, and fled into the interior of their but too inviting country. Increase of wealth does not always add to the welfare or true prosperity of a country. Spain gained the rich provinces of South America, but lost her energy and industry. Who would work, when gold, silver, and pre-

cious stones in abundance were to be had for fetching? Has the national character been improved by these acquisitions? The present state of Spain and Portugal will answer the question.

Soon after the discovery of South America, John Sebastian Cabot, an Englishman in the Portuguese service, discovered Newfoundland, and all that part of the north-east coast, known as the United States. It was peopled by different tribes of Indians under their respective chiefs, a wild, savage, warlike people, often at war with each other; capable of enduring fatigue, and the most excruciating agonies without a pang. There was not much in North America to excite the cupidity or avarice of men, but it held out the prospect of a home and maintenance to many who could not find either in their native countries. Thus settlements were rapidly formed by the French, Portuguese, Dutch, and English. The severe oppressions to which the Nonconformists were subject under Charles and James II. drove a body of them to seek refuge in the New World, and these "pilgrim fathers" laid the foundations of Pennsylvania, New York, and several other states; Virginia, Carolina, and Georgia, with some others, were colonised by England, during the reigns of Anne and George I.

The United States were, in fact, chiefly colonies of Great Britain, and remained subject to the British crown, until various taxes, some of them considered burthensome and unjust, were levied without the consent of the colonists, who now began to feel their own strength, and deter-

mined to resist taxation altogether. In July, 1776, the representatives of the different states assembled in congress, and published a declaration of independence; thus separating at once from the mother country. The French, ever eager to embrace an opportunity of humbling England, embraced the American cause. After a struggle of seven years against Great Britain, during which the Americans displayed great valour, courage, and prudence, their independence was recognized by the mother country, and America became a free nation, and formed a liberal constitution under a federal republic, then consisting of thirteen states. Eleven new states have since been added, besides three territories not yet erected into states. Population, trade, and commerce are greatly increasing.

In 1812 America declared war against Great Britain, but peace was happily restored in 1814. Lower Canada was conquered from the French, and confirmed to Britain in the peace of 1763. Many of the European inhabitants are of French extraction and Roman Catholics, and have a bishop appointed by her Britannic Majesty; but Protestantism is professedly the religion of Canada, under an English bishop. For many years Canada was a clog round the neck of Great Britain, and except as a refuge for her overgrown population, it is doubtful whether even now it be of any real advantage.

Soon after the invasion of Spain by the French in 1808, the Spanish colonies of South America,

which had hitherto been vice-royalties of Spain, began to be agitated by a revolutionary spirit; which was with difficulty kept down for a few years; but in 1821 Mexico, or New Spain, declared its independence; in 1822 a native military chieftain, Augustin Iturbide, caused himself to be proclaimed emperor, but was obliged to abdicate in a year; and in 1824 the Mexicans adopted a constitution of government formed on the model of the United States. In the following years all the Spanish colonies, one after another, with the exception, perhaps, of Brazil, declared themselves independent, and formed separate republican constitutions.

But the people were not prepared by character, education, religion, or habit, to support their constitutions; and hitherto these new republics have presented little else than misrule, revolution, and disaster.

When Bonaparte declared war against Portugal, the regent, with all the royal family, escaped to Brazil, which was raised to the rank of a kingdom in 1815. In 1816, by the death of his mother, John succeeded to the crown of Portugal, and in 1821 returned to Portugal, leaving his son, Pedro, as regent. Brazil, however, in common with the other provinces, declared its own independence in 1822; but with this difference — instead of a republic, Pedro was crowned Emperor of Brazil. On the death of John, in 1826, Pedro declared his daughter, the Donna Maria Gloria, Queen of Portugal; and in 1831 he abdicated the throne of

Brazil in favour of his son, Pedro II., then only six years of age, who is Emperor of Brazil; but the government is under a regency. Brazil is now an hereditary monarchy, with a legislative assembly, consisting of a senate appointed by the emperor, and a house of representatives elected by the people. The religion of the state is Roman Catholic. All other Christians are tolerated, so far as to be allowed to perform their services in private; but public worship, or the building of churches, is strictly prohibited to all but Roman Catholics.

CONCLUSION.

SINCE this little work has been written, and while passing through the press, so many and such great changes have rapidly chased each other over Europe, and the political horizon is still so dark and cloudy, that it has been found impossible to conclude the separate histories satisfactorily. The position of France, the leader in this revolutionary race, remains one of doubt, distraction, and a fearful looking forward. Denmark and Prussia are almost equally unsettled. The King of Bavaria has preferred his Amazonian mistress to his throne, of which Maximilian holds uncertain possession. The venerable Emperor of Austria seeks shelter from "the pelting of the pitiless storm," by hiding his grey hairs in retirement; while Italy, roused from her "*dolce far niente*," has snatched the state from papal power, and struggles for her place among nations. Even imperial Russia is shaken to her centre; and the Poles again look up with hope. Great Britain, strong in her insular position, her excellent constitution, and the loyal hearts of her faithful sub-

jects, ever ready to afford protection to the exile, acknowledges that her true bulwarks are a praying, God-serving people, — her true strength the Lord God, strong in battle, — and her sure defence the Most High, in whose hands are the four winds of heaven.

EXERCISES

ON

UNIVERSAL HISTORY.

1. How is it necessary to divide time, as respects History?
2. What is the advantage gained by this division?
3. What is the next division of History?
4. Did God make any covenant with Noah? and, if so, what was it?
5. What circumstances, connected with the building of Babel, do you recollect?
6. Relate the circumstances of the call of Abraham.
7. At what period, and by whom, was the Assyrian monarchy founded?
8. Who was Sardanapalus, and what did he?
9. What king rendered the Egyptians famous?
10. In what period was Rome governed by kings?
11. Who was Cyrus, and at what period did he live?
12. What does the seventh period contain?
13. How many years elapsed between Constantine the Great and the extinction of the Western Empire?
14. What does the eighth period comprehend and contain?
15. In what period were the Romans invaded by the Vandals and Visigoths?
16. In what period was the Carlovingian race founded?

17. What does the eleventh period contain?
18. What period contains the history of the Crusaders?
19. Were there ever two popes at one time?
20. In what period do you find the history of Tamerlane and Bajazet?
21. During which period was America discovered?
22. What are the chief events of the fourteenth period?
23. In which period flourished Charles XII. of Sweden and Frederic the Great?
24. In which, Pope Leo X., Henry IV. of France, and Philip II. of Spain?
25. In which, Alexander, Darius, Porus, and Cyrus?
26. In which was the conquests of the Romans over Asia Minor and Syria?
27. In what period do you place the battle of Trafalgar, the Revolution and Reign of Terror in France, the accession of the Duke of Cumberland to the throne of Hanover, and the burning of Moscow?
28. Into how many periods do you divide History?
29. At what date do we place the universal deluge?
30. How was the world re-peopled?
31. Where is the Garden of Eden supposed to have stood?
32. Did God give any signal proof of displeasure with the sons of men after the flood?
33. When, and by whom, was the first monarchy founded?
34. With what kingdom was this monarchy united, and what name did it then assume?
35. What were the circumstances that led to this event?
36. Who founded the Macedonian empire, and how?
37. Which of the four divisions of the globe is the most illustrious?
38. Why?
39. Who was Porus?
40. From what does India take its name?
41. What is said of Nadir Shah?
42. Who was Allahabad, and what his fate?
43. Have the British possessions in Asia?
44. What are they doing for the natives?
45. Where is the most authentic record to be found?
46. Of what peculiar family do the Scriptures speak?
47. Has this family been kept a distinct people?

48. Is there anything remarkable relating to their land?
49. At what date does the history of the Jews commence?
50. How old was Abraham at his first call?
51. What happened at Moreh?
52. Into what snare did Abraham fall?
53. Who were the parents of Ishmael and Isaac?
54. Where are the descendants of Ishmael to be found?
55. What is their religious faith?
56. Why was Esau called Edom?
57. Was Jacob willing to enter into the plans of his mother?
58. Did Rebekah seek a temporal or spiritual blessing for her son?
59. What became of the brothers?
60. Did Jacob incur any punishment for his actions?
61. With whom did Jacob dwell?
62. Why did he leave that country?
63. Did the brothers meet again? how and where?
64. Where did Jacob take up his abode?
65. What circumstances occurred to him there?
66. How did Jacob acknowledge his sinfulness?
67. Has any modern traveller discovered the burying-place of Rachel?
68. Why did the sons of the patriarch go into Egypt?
69. Is there any appearance that the patriarch was a partial father?
70. To what consequences did the evil act of the brothers lead?
71. What has been said of Egypt?
72. How do you account for its downfall?
73. What led the Israelites first into Egypt?
74. How did they incur the anger of Pharaoh?
75. Where did Moses receive the laws?
76. What was the peculiar blessing given to Ephraim and Manasseh?
77. Did Pharaoh let the Israelites go willingly?
78. What induced Moses to ask permission of Pharaoh for the departure of the Jews?
79. In what way did Moses, when young, show his dislike to the Egyptians?

0. Why was Moses not allowed to enter the promised land?
1. In what way did the names appropriated to the tribes prefigure their fate?
2. Where was the wilderness in which the Jews wandered?
3. How were they directed in their journeyings?
4. How do modern travellers describe the rock struck by Moses?
5. What number crossed into Canaan?
6. Where was Canaan situated, and how peopled?
7. Have the prophecies of Balaam been fulfilled?
8. Who remained of those sent to examine the land?
9. Where did Miriam die?
10. What became of Jericho?
11. Was any prophecy fulfilled by its being rebuilt?
12. Where are the conquests of the Jews related?
13. Is the history of the Jews a common one?
14. Why were the inhabitants of Canaan driven out?
15. What was the original cause of the idolatrous practices of the Jews?
16. Who was the first judge?
17. Whose manners do those of the Bedouins resemble?
18. When and by whom were the Jews first taken into bondage?
19. By whom and when were they rescued?
20. What lesson does the history of Eli teach?
21. What does that of Samuel and his parents teach?
22. What did the Jews desire in the days of Samuel?
23. What do you know of the character of Saul?
24. What brought Saul into difficulties?
25. Whom did he consult when old?
26. What became of the body of Saul after his death?
27. How many years was this after the Jews had settled in Canaan?
28. Where did David cause the ark to be removed?
29. Can you tell me what Psalms are supposed to have been written on this occasion?
30. Was David a judicious father?
31. What building did David design and plan?
32. How did Solomon begin his reign?

113. What was the extent of his dominions ?
114. Describe the completion and dedication of the Temple ?
115. What is the character of the Proverbs of Solomon ?
116. Into what sins did Solomon fall ?
117. What was the declaration of God ?
118. Were the tribes obedient to Rehoboam ?
119. Who opposed him, and what were the consequences ?
120. How did the Levites behave ?
121. What awful circumstances followed this ?
122. How did the kingdom of Judah prosper ?
123. What is evident through the whole history of Judah and Israel ?
124. What was the character of Jehoshaphat ?
125. What relative was Jezebel to Dido ?
126. Did the prophet Elijah warn the children of Israel at this time of their faults ?
127. Where did he hide himself from the furious Ahab ?
128. What proof did he offer that he was sent by God ?
129. What were the peculiar sins of the Israelites at this time ?
130. Of whom was Elijah a type ?
131. How did Jeroboam enlarge his dominions ?
132. For what was the temple in Samaria built ?
133. In whose reign were the Olympiads first celebrated ?
134. In whose reign did Isaiah prophesy ?
135. Were the Israelites attentive to his prophecies ?
136. What did Jotham do for the city of Jerusalem ?
137. At what period were the Jews taken captive by the Assyrians ?
138. In what state was Jerusalem and the Jewish nation at this period ?
139. Did they improve at all in the reign of Hezekiah ?
140. To what was Canaan exposed by its position ?
141. Who formed an alliance with Egypt, and revolted from the Assyrians ?
142. Who besieged Samaria, and how long did the siege last ?
143. Where were the tribes carried, and what is said of them ?
144. Who invaded Judea ?

145. What happened to his armies ?
146. What are now the only remains of ancient Jerusalem ?
147. In what state did Maundrell find them ?
148. What would the description of Babylon, Tyre, Egypt, and Idumea be ?
149. Which is the most wretched reign in the history of Judea ?
150. What became of Manasseh ?
151. Did he ever return to Jerusalem ?
152. What happened in Jerusalem during the reign of Josiah ?
153. To whom were the Israelites now vassals ?
154. At what period did Nebuchadnezzar destroy Jerusalem ?
155. Were any left in Jerusalem at all ?
156. What became of the remnants of the ten tribes ?
157. Did any other people possess Palestine ?
158. Was any prophecy fulfilled by this ?
159. What were the two great ruling powers of the world at this period ?
160. What induced Nebuchadnezzar to treat the Jews with some degree of respect ?
161. Who was Daniel and his companions ?
162. What lesson may be learned from their history ?
163. What nations did Nebuchadnezzar subdue, and what does he appear to be ?
164. Who subdued the mighty Babylon ?
165. Had the Jews grown reconciled to their residence in Babylonia ?
166. Did they live there as a separate people ?
167. What was among the earliest acts of Cyrus ?
168. Was the permission eagerly embraced ?
169. What proverb have the Jews relating to this ?
170. How long had the Jews been in captivity ?
171. Who led them back ?
172. What did they first do ?
173. Did the temple proceed rapidly ?
174. When was it completed ?
175. Whence grew the bitter hatred between the Jews and the Samaritans ?

176. What plot was formed to destroy all the Jews in Persia?
177. Does any memorial remain of the circumstance?
178. Did Jerusalem regain her ancient splendour?
179. Did the Jews continue pure in their faith?
180. With what country does their history now become blended?
181. What privileges did Alexander grant them?
182. How did Ptolemy Lagus act towards the Jews?
183. What temple had they now?
184. Who completed the canons of the Old Testament?
185. What was the origin of the Sadducees?
186. What was the conduct of Ptolemy Philopater towards the Jews?
187. What did Antiochus the Great for them?
188. Is this name noticed in the New Testament?
189. Which was the kingdom "strong as iron?"
190. Who was killed in attempting to plunder the temple of Jupiter Belus?
191. Did the Jews again fall into idolatry?
192. What causes may be found for this?
193. What numbers are said to have fallen in Jerusalem by the massacre of Antiochus?
194. What was the conduct of Antiochus as respected the altars?
195. Were the sufferings of the Jews great?
196. Who were their deliverers?
197. Who were the Maccabees?
198. What was the result of this struggle?
199. What did the Jews reckon from this period?
200. What did John Hyrcanus?
201. What did Judah now rank?
202. What does Whiston remark of the Asmonians?
203. Who now became troublesome to the Jews?
204. Who was appointed their governor?
205. How did Herod signalize his reign?
206. By whom were the Jews now entirely subdued?
207. What remarkable points do you find in the history of the Jews?
208. What appear to have been their peculiar sins?
209. How did they receive our Saviour Christ the Lord?

10. How may Palestine be now described ?
1. Was Africa known to the ancients ?
2. What proof have we of this ?
3. How many aboriginal tribes were there, and what were they called ?
4. What part of Africa ranks lowest in moral and intellectual value ?
5. When was the Christian faith first introduced ?
6. What are the principal doctrines professed in Africa ?
7. What has contributed to render Africa familiar to the present age ?
8. What do you know of Sesostris ?
9. By whom are the pyramids supposed to have been built ?
10. Who built Alexandria ? and who the Pharos ?
11. When did Egypt become a province of Rome ?
12. Who was Saladin ? and what do you know of him ?
13. Who were the Mamelukes ?
14. How long did they hold power in Egypt ?
15. What occurred in Egypt in 1798 ?
16. From whence comes the name Abyssinia ?
17. What induced the Portuguese to go into Abyssinia ?
18. What did the Emperor Socinius ?
19. To whom are we indebted for our knowledge of Abyssinia ?
20. At what date and where did Dido found a city ?
21. When did this country first become known as Africa ?
22. When did the Vandals make themselves masters of some parts of Africa ?
23. Who were the Saracens ?
24. For what has Barbary been eminent ?
25. What was Morocco anciently called ?
26. Who first assumed the title of Caliph ?
27. Who ascended the throne of Morocco in 1822 ?
28. What do you know of Mohammed Ali Pacha ?
29. Between whom was Algiers originally divided ?
30. Whose aid did the Algerines seek against the Spaniards ?
31. Who sought to subdue this country ?
32. To what country does it now belong ?

243. By whom and when was the first monarchy of Russia founded ?
244. When does the history of Russia become interesting ?
245. What do you know of the Czar Michael ?
246. By whom and when were the first posts established in Russia ?
247. What king made the greatest progress in civilising Russia ?
248. Where and how did he obtain his information ?
249. What was the character of the widow of Peter III., and what the character of her reign ?
250. When was the third partition of Poland ?
251. What is the extent of the Russian territory ?
252. Who in the early part of the nineteenth century invaded Russia ?
253. What was the result of this invasion ?
254. How died Paul I. ?
255. What were Denmark, Sweden, and Norway originally called ?
256. Under what chief did the Danes first become eminent ?
257. When did Denmark first become a kingdom ?
258. When did Denmark obtain its highest pitch of glory ?
259. When did religion first make its way ?
260. Who was Margaret of Valdemer ?
261. Who was the founder of the family of Oldenburg ?
262. Who was the founder of the house of Holstein-Gottorp ?
263. What occurred in 1660 ?
264. What in 1718 ?
265. What was the character of Frederic ?
266. Who was Struensee ?
267. Who were the aboriginal inhabitants of Sweden ?
268. When did that country first embrace Christianity ?
269. With what countries has it been repeatedly united ?
270. Who was Gustavus, and what did he do for that country ?
271. Who tended to exalt the Swedish name ?
272. Who was Christina, and what did she ?

3. Of what character are the exploits of Charles XII.?
4. Was it ever a commercial country?
5. What did Bonaparte in Sweden?
6. Who is now king of that country?
7. Describe the country and natives of Norway.
8. Has Norway any national literature?
9. Where is the first notice of Germany?
10. Of what country does Germany appear to be composed?
- When did the Romans first attempt to subdue it?
- Where was the empire of the Goths and that of the Visigoths?
- What effect had the destruction of the western empire?
- Who was the first Merovingian king?
- What did Charlemagne for Germany?
- What was Spain called in 778?
- What was the extent of the empire of Charlemagne?
- What happened after the death of Louis le Debonnaire?
- Who established the house Hohenstaufen?
- With whom did that house expire?
- What do you know of Rudolph of Hapsburg?
- Who founded the university of Prague?
- What happened in the reign of Albrecht I.?
- What did Jerome of Prague?
- For what was the Council of Constance invoked?
- What happened on a mountain called Mount Tabor?
- When did Frederic III. come to the German throne?
- Describe his reign.
- At what time did the Reformation take place, and how proceed?
- Why were the Christians called Protestants?
- What was the nature of the contest between Ferdinand I. and the Pope?
- Who founded the order of Jesuits?
- What extinguished the line of Hapsburg?
- At what period did Germany enjoy the greatest degree of peace?
- What effect had the revolution of 1789 upon Germany?

306. When, and by whom, was the title of Emperor of Germany changed to that of Emperor of Austria?
307. When was the Germanic Confederation established?
308. From what race are the Prussians descended?
309. Who attempted to introduce Christianity?
310. Who first obtained the entire sovereignty of Prussia?
311. Under whom was this independence lost?
312. Who laid the foundation of the military of Russia?
313. What do you know of Frederic the Great?
314. Who was his mother?
315. What remains a stain upon his glory?
316. When, and by whom, was Poland again partitioned?
317. Who finally destroyed this country?
318. What were the consequences of the battle of Jena?
319. What was gained by the peace of Tilsit?
320. What of the peace of Paris?
321. What was the original name of Switzerland, whence derived?

[illegible]

CHRONOLOGICAL TABLE.

In the annexed Chronology the vowels *a, e, i, o, u*, represent 1, 2, 3, 4, 5; the diphthong *au* 6, *oi* 7, *ei* 8, *ou* 9: *b* stands for 1, *d* for 2, *t* for 3, *f* for 4, *l* for 5, *s* for 6, *p* for 7, *k* for 8, *n* for 9.

The diphthongs stand for one figure only. *y* and *x* stand for 0, and *g* for two 0s. Pronounce *y* as *w*, to distinguish it from *i*: thus *kyt* (803), pronounce *kwiit*.

After A. D. 999, there are no letters in the abbreviation to express 1000, it being understood thus — *ap* stands for 1017.

B. C.			B. C.
4004.	Creation of the World according to the Hebrew Scripture Text	Crea. heb.	ogo.
5872.	According to the Septuagint Version.	Crea. sep.	leipe.
